#### FY 2001 RDT&E, ARMY PROGRAM ELEMENT DESCRIPTIVE SUMMARIES

#### INTRODUCTION AND EXPLANATION OF CONTENTS

- 1. General. This section has been prepared for the purpose of providing information concerning the Army Research, Development, Test and Evaluation program. The Descriptive Summaries are comprised of R-2 (Army RDT&E Budget Item Justification Program Element level), R-2A (Army RDT&E Budget Item Justification project level) and R-3 (Army RDT&E Cost Analysis) Exhibits which provide narrative information on all RDT&E program elements and projects for the FY 1999, 2000 and 2001 time period.
- 2. Relationship of the FY 2001 Budget Submission to the FY 2000/2001 Budget submitted to Congress. This paragraph provides a list of program elements restructured, transitioned, or established to provide specific program identification.
- **A. Program Element Restructures.** Explanations for these changes can be found in the narrative sections of the Program Element R-2/R-3 Exhibits.

### D. FY 2001 programs for which funding was shown in the FY 2000/2001 President's Budget Submit (February 1999), but which are no longer funded.

PE/PROJECT	TITLE	BRIEF EXPLANATION
0203726A/2ET	AFATDS Operational Test	ACAT category changed from ACAT I to
		ACAT II – funds transferred to 0605712A/001
0203802A/689	ATACMS Block IIIB	Program terminated
0602787A/845	Bone Disease Research Program	Program completed
0602308A/636	Army After Next (AAN) Applied Research	Program terminated
0602720A/895	Pollution Prevention	Restructured to PE 0603728A/02
0604802A/134	Objective Individual Combat Weapon	Funds transferred BA 4 PE 0603802A/AS3 to
		support the PDDR phase rather than EMD.
0603004A/L94	Electric Gun System Demo	Demonstration program delayed until FY 2006
0603313A/380	Multi-Platform Launcher	Program terminated
0603313A/493	Rapid Force Projection Demo	ACTD Completed

### D. FY 2001 programs for which funding was shown in the FY 2000/2001 President's Budget Submit (February 1999), but which are no longer funded (continued).

PE/PROJECT	<u>TITLE</u>	BRIEF EXPLANATION
0604321A/2FT	ASAS Operational Test	ACAT category changed from ACAT I to
		ACAT II – funds transferred to 0605712A/001
0604645A/022	FSV-Engineering Development	Program terminated in support of the Army
		Transformation
0604649A/G25	M1 Breacher Development	Program terminated in support of the Army
		Transformation
0604768A/686	ATACMS Block IIA	Program terminated in support of the Army
		Transformation
0708045A/E31	National Defense Center for Environmental	Funds transferred to BA 4 PE 0603779A/035 as
	Excellence (NDCEE)	per Congressional direction.

### 3. Classification. This document contains no classified data. Classified/Special Access Programs which are submitted offline are listed below.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)				February 2000					
BUDGET ACTIVITY 6 - Management and Support						PROJECT <b>D976</b>			
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D976 Army Threat Simulator Program	12354	1968	3 13901	15929	15880	20439	21027	Continuing	Continuing

A. Mission Description and Budget Item Justification: This program finances the design, development, integration and fielding of realistic mobile threat simulators and realistic threat simulation products utilized in Army training, developmental tests and operational tests. Army Threat Simulator and Threat Simulation products are utilized to populate test battlefields for US Army Test and Evaluation Command (ATEC)-conducted operational tests, and to support PEO required user testing in System Integration Laboratories and hardware/simulation in the loop facilities. Army threat simulator and threat simulation products developed or fielded under this program support Army wide requirements defined in the AMC chartered Threat Simulator and Simulation Program Plan (TSPP) and identified as nonsystem specific threat product requirements. Each capability is pursued in concert and coordination with existing Army and tri-service capabilities to eliminate duplication of products and services while providing the proper mix of resources needed to support Army testing and training. These battlefield simulators represent systems (e.g. missile systems; command, control and communications systems; electronic warfare systems; helicopters; etc.) that are used to portray a realistic threat environment during testing of US weapon systems. Simulator development is responsive to Office of the Secretary of Defense and General Accounting Office concerns that the Army conduct operational testing in a realistic threat environment. Initially created to develop simulators of Soviet equipment, the changing world order has expanded the scope of this program to address rest of world (ROW) threats. Actual threat equipment is acquired when appropriate in lieu of development. Total package fielding will still be required (i.e., instrumentation, operations and maintenance, manuals, new equipment training, etc.). Threat simulator development is accomplished under the auspices of the Project Manager for Instrumentation, Targets, and Threat Simulator

#### **FY 1999 Accomplishments:**

- 2433 Completed threat transmissions and communication devices within the command data link structure; installed and integrated fire units and acquisition radar data links; and integrated lower echelon command structure for the Battle Management Network.
- 1782 Completed Proof-of-Principle field test of an eye safe laser/receiver design for XMDEWS Advanced Land Combat Systems.
- 1000 Developed Jamming Simulator for US Army Battle Laboratory (Congressional Plus-up).
- 2529 Completed design and development of embedded instrumentation system for the XM15A Air Defense System.
- 1856 Completed design and development of embedded instrumentation system for the XM43A Air Defense System.
- 2754 Continued development of Advanced Distributed Electronic Warfare Simulation (XMADEWS).
- Total 12354

#### FY 2000 Planned Program:

- 1735 Develop Global Positioning System (XMGPS) receiver jammer.
- 3336 Continue development of XMDEWS Advanced Land Combat System.
- 3615 Initiate instrumentation and fielding of XM70A threat system.

A. <u>Mission Description and Budget Item Justification</u>: This program funds aerial and ground target hardware and software development, maintenance and upgrade. The overall objective is to allow validation of weapon system accuracy and reliability by developing aerial and ground targets essential for Test and Evaluation (T&E). These targets are economical and expendable, remote controlled or stationary, and often destroyed in use. The Army is the Tri-Service lead under Reliance for providing rotary wing, mobile ground and assigned legacy targets for test and evaluation. The Army executes development of some Service-peculiar target requirements in support of quality assurance, lot acceptance and training; and continues development of Service-peculiar and ongoing target material upgrades to maintain continuity with current weapons technology and trends in modern and evolving Army weapons.

ARMY RDT&E BUDGET ITE	STIFICATION (R-2A Exhibit)						February 2000					
BUDGET ACTIVITY 6 - Management and Support			_	MBER AND 1 4258A 7		stems D	tems Development PROJECT D238					
COST (In Thousands)	FY1999 FY 200 Actual Estima					FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost		
D238 Aerial Targets	5279	6	6417	5915	6327	6036	9106	9479	Continuing	Continuing		

Mission Description and Justification: Provides for development, acquisition, operation, storage, update, and maintenance of realistic surrogate or acquired threat high-performance, multi-spectral aerial targets that can fully stress the latest air defense and air-to-air weapons. Modern weapons require test, evaluation, and training using threat representative aerial targets to assess their effectiveness on the battlefield. This program encompasses a family of rotary and fixed-wing targets, full-scale, miniature and subscale targets, tactical ballistic targets, ancillary devices, and remote control systems. To stress systems under test, aerial targets must have flight characteristics, signatures, and other performance factors, which emulate the modern threat. This tasking includes long-range planning to determine future target needs and development of coordinated requirement documents; the management of target research, development, test and evaluation process; execution of the validation process to ensure that surrogate targets adequately represent the threat; development and acquisition of surrogate and acquired targets; and continuing maintenance, storage, and development/enhancements/update via engineering services of the developed and acquired threat targets to ensure availability for the Test and Evaluation (T&E) customer. The US Army is the Reliance lead for rotary wing targets and the Tri-Service lead for procurement and enhancement of the MQM-107 Fixed Wing Target.

#### **FY 1999 Accomplishments:**

- 1518 Completed baseline configuration and initiate update for Hokum-X Rotary Wing Target (Canadian Cooperative Program) to include developmental integration work of Universal Drone System (UDS) Drone kits into the first aircraft.
- 1339 Continued enhancement of the MQM-107 Target system, including updating of obsolete parts to maintain producibility and supportability; manage fabrication; and correct autopilot deficiencies performance and payload capability needed by the Army and the other services (Army assigned Tri-Service lead for MQM-107).
- 381 Integrated and installed the Universal Drone System (UDS) into the Hokum-X target. AH-1 integration and installation scheduled for FY00.
- T82 Initiated Redesign of Target Tracking and Control System (TTCS), with state of the art computer processors, and datalink to replace obsolete system that allows system use beyond year 2000. Continue to maintain current configuration TTCS, to support on-going operations, until redesigned configuration TTCS's are available.
- 794 Continued development, enhancement, maintenance, and storage for all RDT&E aerial targets, towed targets and ancillary devices.
- 465 Initiated development of Unmanned Aerial Vehicle Surrogate (UAV-S) Target.

Total 5279

## FY 2000 Planned Program:

 Manage the Army Rotary Wing target program (e.g., QAH-1, QUH-1, QH-50, etc.), including updates for obsolescence, maintenance, and safety to support T&E programs such as Stinger and Medium Extended Air Defense System (MEADS). Continue maintenance and storage of Hokum-X Rotary Wing Target (Canadian Cooperative Program) and complete integration of UDS into the Hokum-X target.

A. Mission Description and Budget Item Justification: This program funds development and acquisition of major developmental test instrumentation for the U.S. Army Test and Evaluation Command (ATEC) and Developmental Test Command (DTC) test activities: White Sands Missile Range (WSMR), NM; Yuma Proving Ground, (YPG), AZ; Aberdeen Test Center (ATC), MD; Dugway Proving Ground (DPG), UT; Redstone Technical Test Center (RTTC), AL; and Aviation Technical Test Center (ATTC), AL; and for the US Army Kwajalein Atoll (USAKA), which is managed by the U.S. Army Space and Missile Defense Command. Program also funds development and acquisition of Operation Test Command (OTC) major field instrumentation. Requirements for instrumentation are identified through a long range survey of project managers, Research Development and Engineering Centers (RDECs), and Battle Laboratories developing future weapon systems and the test programs that require these systems. Army testing facilities are also surveyed to determine major testing capability shortfalls.

ARMY RDT&E BUDGET ITE	M JUS	JUSTIFICATION (R-2A Exhibit)						February 2000		
BUDGET ACTIVITY 6 - Management and Support				JMBER AND <b>1</b>		st and Ev	aluation	Investme		PROJECT <b>D984</b>
COST (In Thousands)	FY 1999 Actual	FY 200 Estima		FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D984 Major Technical Test Instrumentation	28827	27	7006	29275	33612	39005	38803	44402	Continuing	Continuing

Mission Description and Justification: This project develops and acquires major test instrumentation to perform developmental testing of weapon systems at U. S. Army Test and Evaluation Command (ATEC) Developmental Test Command (DTC) activities which include: Yuma Proving Ground (YPG), AZ; Aberdeen Test Center (ATC), MD; Dugway Proving Ground (DPG), UT; White Sands Missile Range (WSMR), NM; Redstone Technical Test Center (RTTC), AL; and Aviation Technical Test Center (ATTC), AL. Projects are designated major based on their visibility, assessed relative technical risk (medium-high), schedule risk, cost (generally greater than \$1M/yr or \$5M total project) and applicability to other mission areas or services. These projects are technically demanding, pushing the state of the art, unique instrumentation assets or suites to meet the technology shortfalls, and generally result from development programs managed by a professional project management team. The Test Support Network (TSN) at WSMR provides complete secure coverage of voice, data and video in a single integrated, transport system. TSN will provide advanced encryption capabilities and remote control of switching capabilities for test configuration and total network data arrangement control. The Land Combat Instrumentation (LCI) provides for upgrade and expansion for ATC's suite of instrumentation required for performance testing of combat and tactical vehicles, advanced armor, and advanced munitions. The Frequency Surveillance System (FSS) provides remote capabilities to daily operations of radio frequency spectrum surveillance at WSMR in support of all Service and non-DoD agency tests. The Dynamic Infrared Scene Projector (DIRSP) conducts performance testing of night vision sensors and Infrared (IR) imaging seekers at RTTC, and will provide the capability to fully simulate and synthesize present and future battlefields with a mix of real and simulated objects. The Hardened Subminiature Telemetry and Sensor System (HSTSS) is developing, miniaturizing, and hardening an instrumentation/telemetry package at YPG that will provide continuous direct measurement of internal functioning and flight data for cannon-launched munitions, smart submunitions, and small missiles/rockets. The Range Digital Transmission System (RDTS) will improve test operations and will reduce test costs allowing for efficient data collection and remote operations at YPG. The Mobile Infrared Scene Projector (MIRSP) project will conduct performance testing of imaging infrared and FLIR sensors while installed on the weapon system under test at ATTC.

#### **FY 1999 Accomplishments:**

- 10997 Continued WSMR TSN Phase I to include installation and acceptance testing to support IOC. Initiated installation of breakout and feeder sites to support WSMR TSN Phase II.
- 1826 Continued installation of the LCI Automotive Communication Network (ACN) at ATC Churchville test area. Completed Direct Fire Productivity Improvement instrumentation.
- 6377 Purchased, integrated, and initiated factory acceptance testing WSMR FSS equipment at the contractor's site.
- 2925 Continue DIRSP system integration and began preliminary factory acceptance testing at contractor's facility.
- Continued development of HSTSS instrumentation for YPG and started acceptance testing of key components. Awarded EMD contract for referenced Crystal Oscillator which provides the "clock" for the transmitter timing that gives the IRIG compatibility accuracy required by the T&E ranges.
- 938 Completed RDTS acquisition strategy and Engineering Design Plans to include engineering drawings and site survey report. Completed RDTS telecommunications installation plan and the telecommunications system engineering plan.

Project D984 Page 4 of 7 Pages Exhibit R-2A (PE 0604759A)

## DATE **ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)** February 2000 PE NUMBER AND TITLE BUDGET ACTIVITY **PROJECT** 6 - Management and Support 0604759A Major Test and Evaluation Investment **D984** FY 1999 Accomplishments: (continued) Continue Phase I of the MIRSP project, which develops a risk mitigation prototype for the objective MIRSP (which is Phase II). The prototype will be a full-up infrared scene projector housed in a mobile trailer and will be fielded with the Aviation Technical Test Center, Ft Rucker, Al. 28827 Total FY 2000 Planned Program: 13190 Continue WSMR TSN Phase II installation effort to include fiber optic service extension and additional network/subnetwork capability. Complete Phase I and achieve IOC. 754 Continue installation of ACN instrumentation at ATC. 381 Complete integration and final system acceptance test of FSS equipment at WSMR. 735 Complete DIRSP system integration and factory acceptance testing at contractor's facility. Complete Site Acceptance testing at Redstone Technical Test Center. 6135 Award GPS Sensor Contract for HSTSS. Incorporate HSTSS into TERM-KE tactical configuration. Incorporate HSTSS into MLRS program for stockpile reliability testing. 2147 Initiate installation plans and system engineering for all outside digital fiber optic cable and inside plant electronics to support Phase I of RDTS for the YPG West Kofa test ranges to support telecommunications systems. Complete MIRSP Phase I system fabrication, integration and testing at ATTC. Initiate requirements definition and concept development for Phase II Objective MIRSP. Small Business Innovative Research/Small Business Technical Transfer (SBIR/STTR) Program. 703 Total 27006 FY 2001 Planned Program: 18186 Complete WSMR TSN Phase II system integration. Initiate Phase III to include extension of fiber optic service to additional WSMR test sites. 901 Continue installation of ACN instrumentation at ATC. Continue development and acceptance testing of HSTSS components. 3954 4893 Continue installation of digital fiber optic cable to support YPG RDTS Phase I. Continue development of MIRSP Phase II, (the fullup system). 1341 Total 29275 Project D984 Page 5 of 7 Pages Exhibit R-2A (PE 0604759A)

ARMY RDT&E BUDGET ITE	EM JUS	JUSTIFICATION (R-2A Exhibit)						February 2000		
BUDGET ACTIVITY 6 - Management and Support			_	JMBER AND <b>14759A</b>		st and Ev	aluation	Investme		PROJECT D986
COST (In Thousands)	FY 1999 Actual	FY 200 Estima		FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D986 Major User Test Instrumentation	2296	4	1653	6548	8260	8627	10303	12060	Continuing	Continuing

Mission Description and Justification: This project finances the development of major field instrumentation for Operational Testing (OT), Force Development Testing and Experimentation (FDTE), and Army Warfighting Experiments (AWE) for the U.S Army Test and Evaluation Command's (ATEC) which includes operational test directorates at Fort Hood, TX, Fort Bragg, NC, Fort Sill, OK, Fort Bliss, TX and Fort Huachuca, AZ. Each initiative set forth in this program is directly tied to tactical systems that support each of the five Army Modernization Objectives: Project and Sustain; Protect The Force; Win Information War; Conduct Precision Strikes; and Dominate The Maneuver Battle. Cornerstone of this effort is the Mobile Automated Instrumentation Suite (MAIS) which provides users a high fidelity, realistic, real-time capability to measure the performance of hardware and personnel under tactical conditions for small and large-scale operations (up to 1830 players). MAIS is the US Army's only RTCA capability and is used to test all current and future U.S. Army weapons and weapon systems in a force-on-force operational environment. The D986 program includes three major thrust areas: MAIS Pre-Planned Product Improvements (P3I), Instrumentation XXI, and Protocol Data Unit (PDU) Gateway. While each of these thrust areas have discrete objectives, sub-programs, and end states, they are extensively intertwined in a complimentary and synergistic manner such that the net effect of the integrated capabilities provides significant leveraging opportunities in terms of system performance and overall capability afforded to the community. Without these capabilities, the Operational Test community will encounter shortcomings in its ability to adequately assess Medium Force Brigade and Army 2010 and Beyond developments. MAIS P3I RDTE develops the instrumentation required, but not funded, under the basic MAIS program. MAIS P3I RDTE develops performance enhancements and technology upgrades to the MAIS C3 Center, Communications Network, weapons system interfaces, and miniaturization of the vest peripherals, GPS System, and Encryption components. These improvements will enable MAIS to measure and record accrued damage, levels of exposure, effects of countermeasures, evasive action, and instrument threat vehicles, while significantly reducing system intrusiveness and increase the safety of current instrumentation for both vehicle and dismounted instrumentation. MAIS P3I provides insertion of enhancements to the RTCA algorithms; simulation of Opposing Force (OPFOR) weapon systems and player units for newly acquired weapon systems; and development of player units for new weapon systems. These core system enhancements are required as part of the basic program enabling the operational test community to effectively emulate current and future battlefield weapons in a high fidelity environment. Weapon system unique MAIS components are funded by the weapon system program. The Instrumentation XXI thrust area of MIAS develops instrumentation that does not presently exist to monitor, record, stress, and analyze the effects of the digital information battlefield in a realistic operational scenarios. Instrumentation XXI is required by the operational test community to integrate digital battlefield data collection and analysis tools into the MAIS. These tools will collect, store and analyze data from this new dimension of digital battlefield warfare. Instrumentation XXI ensures Army 2010 and Beyond communications can be captured and analyzed at various echelons from the tactical vehicle to the command center, in realistic operational scenarios. Personnel and resources cuts have already been taken in the test community predicated upon data reduction/analysis streamlining provided by this MAIS capability. The PDU Gateway thrust area responds to the current OPTEMPO and PERSTEMPO demands to force the US Army to conduct more realistic, more accurate, and comprehensive evaluations at reduced costs by virtually replicating a greater number of troop resources in force-on-force testing and training exercises. PDU Gateway provides MAIS the opportunity to interface the Live component "weapons systems" into the synthetic environment and leverage live tests with simulations. The ability to fully stress the entire battlefield with numerous simulated entities present opportunities for significant cost savings and greater realism than would otherwise be achievable.

Project D986 Page 6 of 7 Pages Exhibit R-2A (PE 0604759A)

## DATE **ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)** February 2000 BUDGET ACTIVITY PE NUMBER AND TITLE **PROJECT** 6 - Management and Support 0604759A Major Test and Evaluation Investment **D986 FY 1999 Accomplishments:** Completed the First Generation Dismounted Troop miniaturization design, development and testing in preparation for production. Completed the design and development of the Javelin interface. Completed the design, development, and implementation of a MAIS-MILES interoperability capability. Initiated the feasibility study and requirements definition of MAIS future miniaturization, specifically Micro Programmable Electronics (MPE). Initiated the design and development of the MAIS Weapons Performance Module (WPM) which miniaturizes the remaining MAIS functionality and secures cost savings resulting from decreased production and life-cycle support costs. 2296 Total FY 2000 Planned Program: 4550 Complete the design and development of the MAIS Weapons Performance Module (WPM) and the Micro Programmable Electronics (MPE) initiative. Continue MAIS miniaturization, specifically the design, development, and testing of system algorithms. Initiate studies, implementation concepts, and conduct preliminary testing of a new programmable encryption device mandated by the National Security Agency. Initiate the development of core system algorithms and interfaces for existing and emerging weapon systems. Initiate development of a reconfigurable interface/controller that allows MAIS to use the training community's surrogate weapons. Initiate development of player unit Bus Architecture for player unit instrumentation kits to improve performance, safety, and eliminate bulky cabling. Initiate C3 Center upgrade and performance improvement studies. Evaluate and prototype a multi-spectral laser receiver that receives both simulated engagement pairing and tactical laser messages. 103 Small Business Innovative Research/Small Business Technical Transfer (SBIR/STTR) Program Total 4653 FY 2001 Planned Program: Complete development of the player unit Bus Architecture. Continue MAIS P3I core weapon system interface development for existing and emerging weapon systems. Continue development of the MAIS reconfigurable surrogate interface/controller. Continue MAIS miniaturization, specifically design, development and testing of system algorithms. Initiate the development of core system algorithms and interfaces for existing and emerging weapon systems to include vest peripherals, GPS System and Encryption components. Continue development of a reconfigurable interface/controller that allows MAIS to use the training community's surrogate weapons. Continue development of the MAIS Weapons Performance Module. Initiate After Action Review, Test Officer's Training Station, Combat Identification for Dismounted Soldiers (CIDDS) and the Land Warrior Interface. Implement development of the Weapon System Software Compatibility Upgrade. Initiate design and development of the MAIS P3I Wearable Computer. Implement C3 Center upgrade and performance improvements. Implement new encryption device in conjunction with MPE. 6548 Total Project D986 Page 7 of 7 Pages Exhibit R-2A (PE 0604759A)

A. Mission Description and Budget Item Justification

This program funds the RAND Arroyo Center, the Department of the Army's Federally Funded Research and Development Center (FFRDC) for studies and analysis, which has operated at RAND since FY 1985. The Arroyo Center draws its researchers from RAND's staff of approximately 600 professionals trained in a broad range of disciplines. About 90 percent of RAND's staff are located at the corporate headquarters in Santa Monica, California; the remainder are based at RAND's Washington D.C. office. The RAND Arroyo Center provides for continuing analytical research across a broad spectrum of issues and concerns, which are grouped in four major research areas: Strategy, Doctrine, and Resources; Military Logistics; Manpower and Training; and Force Development and Technology. The RAND Arroyo Center research agenda is primarily focused on mid/long-term concerns. Results and analytical findings directly impact senior leadership deliberations on major issues. Arroyo Center research is sponsored by the Chief of Staff, Vice Chief, and Assistant Vice Chief of the Army; the Deputy Chiefs of Staff of the Army; the Assistant Army Secretaries; and most of the Army's major commands. The Arroyo Center is provided guidance from the Army through the Arroyo Center Policy Committee (ACPC), which is co-chaired by the Vice Chief of Staff of the Army and the Assistant Secretary of the Army (Acquisition, Logistics and Technology). The ACPC reviews, monitors, and approves the annual Arroyo Center research plan as well as all individual research projects. Each project requires General Officer (or SES equivalent) sponsorship and involvement on a continuing basis. RAND Arroyo provides the Army with a unique multidisciplinary capability for independent analysis. Although the Arroyo Center staff work with analysts in the Army's internal study program, the Arroyo Center is an independent organization that provides analysis for both the Army and the broader national security community. Work in this p

## FY 1999 Accomplishments:

Researched addressing the national security debate, including assisting senior Army leadership in informing and influencing defense community thinking on operational concepts and technological applications for future forces; helping the leadership evaluate how to best develop and demonstrate capabilities to support domestic authorities in peace and war; evaluating the effects of continuing deployments on the ability to maintain wartime readiness requirements; assisting Army leadership to prepare for high-level strategy, force structure, and resource reviews; applying a new methodology for measuring state power in the post-industrial age; examining how Asian economic crisis will affect the security environment; evaluating the effects of continuing deployments on ability to maintain wartime readiness requirements; informing Army thinking on multinational force compatibility; explore U.S. military capabilities to conduct operations in urban environments; assisting the Army in evaluating candidate AAN capabilities and operational concepts through system-of-system/force-on-force analysis; helping determine how the Crusader might best integrate into the Army's vision of the future; improving joint interoperability by evaluating prioritization approaches for coupling Army's C4I operational and system architectures in a constrained resource environment; improving analytical tools to support the next QDR; assessing how science and technology should be conducted to meet AAN mission objectives; and analyzing the benefits of improved effectiveness of precision munitions and the impact of modern weapon systems on war planning in terms of in-theater logistics footprint and deployability and logistics force structure.

D614 US Army Kwajalein Atoll	127470	13932	153326	144715	127949	135831	139560	Continuing	Continuing		

A. Mission Description and Justification: The U.S. Army Kwajalein Atoll/Kwajalein Missile Range (USAKA/KMR) is a remote (located in the Republic of the Marshall Islands), secure activity of the Major Range and Test Facility Base as constituted by DoD Directive 3200.11. Its function is to support test and evaluation of major Army and DoD missile systems, Army Space surveillance and object identification, and National Aeronautics and Space Administration (NASA) scientific and space programs. Programs supported include Army missile defense, Ballistic Missile Defense Organization (BMDO) demonstration/validation tests, Air Force Intercontinental Ballistic Missile (ICBM) development and operational tests, U.S. Space Surveillance Network, and NASA Space Transportation System (Shuttle) and orbital debris experiments. USAKA/KMR supports the Missile Defense Act of 1991 to put in place a Ground Based Defense System by 2006 or earliest date possible. The technical element of USAKA/KMR is the Kwajalein Missile Range, which consists of a number of sophisticated, one-of-a-kind, radar, optical, telemetry, command/control/ communications, and data reduction systems. These systems include the four unique radars of the Kiernan Reentry Measurement Site (KREMS); super Recording Automatic Digital Optical Tracker (RADOT) long range video-metric tracking systems, high density data recorders for high data-rate telemetry, and underwater acoustic impact location system data analysis and reduction hardware and software. USAKA/KMR is contractor operated and is therefore totally dependent upon its associated support contractors. Program also provides funds for the contractors to accomplish installation operation and maintenance (O&M). The lean O&M funding for FY 1999 has resulted in the delay of critical repair and replacement of facilities and equipment. The FY99 reductions in this PE and the USAKA/KMR line in PE 0604759A have delayed completion of critical range modernization efforts by over one year, negating savings until FY03 and causing a serious backlog of infrastructure repair and maintenance, as well as contributed to multi- million dollar equipment repair/replacement backlog. Noted funding for FY's 00/01 is required to maintain minimal O&M support, while accepting moderate risk of continued degradation of USAKA/KMR infrastructure (housing, offices, facilities), higher future repair costs, and reduced logistical support capability, as well as continuation of the KMR Modernization and Remoting (KMAR) Program. The KMAR program is a concurrent, rangewide modernization effort to maximize the use of common, standardized Commercial Off-The-Shelf (COTS) technology to replace obsolete components; implement common hardware/software architectures and automation; and "remote" the operation of range sensors and instrumentation to the island of Kwajalein. This effort will upgrade range capabilities that are critical to the success of upcoming Theater Missile Defense (TMD) and National Missile Defense (NMD) test missions as well as reduce USAKA/KMR annual operating costs by \$17.7M per year beginning in FY03 as reflected in FY03-05 funding levels above. The Army, Air Force, Navy and BMDO have programs planned, which have significant test and data gathering requirements at USAKA/KMR. Air Force programs require firing at full range with complete data collection during late mid course and terminal trajectory. BMDO programs require range sensors to collect technical data in support of National Missile and Theater Missile Defense programs being conducted at USAKA/KMR. These test data cannot be obtained except through the use of technical facilities available on and in the vicinity of USAKA/KMR. Data collection on objects in space remains significant because the Advanced Research Project Agency (ARPA) Long-Range Tracking and Instrumentation Radar (ALTAIR), located at USAKA/KMR, is one of only three sensors world-wide that has deep-space tracking capability. Programs supported include Air Force programs Peacekeeper, Minuteman III, and Delta; Army/BMDO's NMD (GBI, GBR, BMC3, IFICS), TMD (THAAD, PAC-3, System Integration of Tests, Family of Systems) Theater Missile Defense Critical Measurements Program, Theater High Altitude Air Defense (THAAD), Patriot, and ground-based radar; NASA's

**A.** <u>Mission Description and Justification</u>: The Concept Experimentation Program (project 308) enables the U.S. Army Training and Doctrine Command (TRADOC) battle labs and schools to evaluate emerging technologies and other equipment to help define Army mission needs and operational requirements. Projects selected for funding are relatively low cost conceptual evaluations, with high potential for warfighting return on investment. The program provides direct support to Battle Lab Warfighting Experiments (BLWE). The program is also a first look at emerging technologies that have the potential to support the Army's Force XXI design needs. The Digital Information Technology Testbed (project 309), is a functional test bed and model for the DOD and Federal Government to test and integrate new digital technologies for collecting, disseminating and managing information globally. It is also operational multimedia records (management and archives) that enable DOD to meet its Title 10 responsibilities under the Goldwater-Nichols Act through collecting, managing and disseminating information worldwide to achieve knowledge dominance. Force XXI Experimentation (project 312) funds the Army Experimentation Campaign Plan (AECP) in support of transforming the analog Army into a digital Army.

ARMY RDT&E BUDGET ITE	February 2000									
BUDGET ACTIVITY 6 - Management and Support		_	MBER AND 5326A (		Experime	entation F	Program		PROJECT D308	
COST (In Thousands)	FY1999 Actual	FY 200 Estima		FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D308 Concept Experimentation Program	13583	18	8823	8931	9373	9340	9315	9291	Continuing	Continuing

Mission Description and Justification: The Concept Experimentation Program (CEP) is a key innovative tool which provides TRADOC battle labs and schools the ability to capitalize on emerging technologies, emerging warfighting concepts, and new materiel initiatives. Program growth reflects increased emphasis on Force XXI initiatives and accelerated acquisition methods. Funds are used to acquire, lease or fabricate equipment to conduct experiments to determine military utility or potential to satisfy Army Doctrine, Training, Leader Development, Organization, Materiel and Soldiers (DTLOMS) needs. TRADOC battle labs build on initiatives with greatest potential payoff. Program is also used as a first look at emerging technologies and emerging warfighting concepts that have the potential to support the Army's Force XXI design needs. As the Army moves toward Force XXI, the critical task of designing the force around information requires major investment in information-age capabilities. Constructive, virtual, and live simulations are used to examine warfighting concepts across DTLOMS domains. They cover all aspects of command and control, lethality, survivability, and tempo and are essential to technology insertion in future Army systems and force structure.

#### FY 1999 Accomplishments:

- 350 Future Fires Command and Control
- 129 Real time Tactical Video Link
- 97 Helmet Mounted Sniper Detection System
- 136 Own the Night Technologies
- 491 Beyond Line of Sight Communications Support for Aviation and Maneuver Support
- 178 Battle Command Vehicle
  - 225 Semi-Autonomous Reconnaissance Operations for Mounted Maneuver II
- 200 Rotocraft Pilots Associate (RPA) Interrogation into Army after Next Platforms
- 437 Weather/Terrain Assessment Tool
- 235 Space Technology to Enhance Information Dominance on the Move
- 56 Configured Load Unit Building
- 248 Manned and Unmanned Aerial Platforms
- 132 Warfighters Information Network (WIN) Space-Based Collection and Reporting
- 500 System Linkages (Force XXI/AECP)
- 672 After Action Reporting Capability (Force XXI/AECP)
- 100 Digital Force Coordination Cell (Force XXI/AECP)
- 3500 Communications Linkages (Force XXI/AECP)
- 120 System Architecture for Joint Contingency Force AWE (Force XXI/AECP)

Mission Description and Justification: The DoD Information Technology Testbed (DITT) is a functional concept exploration, testbed and prototyping program established under charter by the Assistant Secretary of Defense for Command, Control, Communications and Intelligence (ASD C3I) to develop innovative, enterprise wide solutions to information, document, record and knowledge management. The DITT, located at Ft. Leavenworth, KS, develops methodologies to share and utilize information across organizations at the DOD level, develops solutions for emerging issues/problems and prototypes massive archive systems to house and access multimedia databases that can be used to support both Army and Joint operations. The DITT system will be used to conduct operational testing of COTS/GOTS software/hardware IAW the DOD Electronic Document and Record Management (EDRM) Strategic Plan and will perform limited conformance testing of software products against various information management standards for the IEEE.

Mission Description and Justification: The Army Experimentation Campaign Plan (AECP) mission is to experiment with forces enabled with information based command and control, advances in training and leader development, technology enhancements, and joint interoperability to realize improvements in warfighting capability and strategic responsiveness. The objective of experimentation is to increase our Army's strategic responsiveness for an expanded range of missions while preserving our core capability of warfighting. FY01 funds are to be divided amongst the experimental axes: Heavy, Light, and Strike Force. Operational guidelines require new concepts to meet national strategy and anticipate emerging threats; increase interoperability; maintain doctrine, training, leader development, organization, materiel, and soldiers change in balance; and concepts will be subject to rigorous analysis and experimentation to inform senior army leadership decisions. Initiatives include developing system of systems linkages; exploring and developing new training support packages, digital AAR capabilities, system engineering and architecture development, and simulation/stimulation architecture and engineering development.

FY 1999 Accomplishments: Funded in Project D308

FY 2000 Planned Program: Funded in Project D308

#### FY 2001 Planned Program:

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DF30 Army Test Ranges & Facilities	120024	14648	119657	116666	133737	139927	160833	Continuing	Continuing

A. <u>Mission Description and Justification</u>: Effective 1 October 1999, the US Army Operational Test and Evaluation Command (OPTEC) was redesignated as the US Army Test and Evaluation Command (ATEC). The three subordinate commands assigned to ATEC are: the Army Evaluation Center (AEC), the Operational Test Command (OTC) formerly the Test and Experimental Command (TEXCOM), and the Developmental Test Command (DTC) formerly the US Army Materiel Command's Test and Evaluation Command (TECOM). All functions and resources in this PE are managed by the Developmental Test Command.

Project DF30 provides the required test capability for DTC developmental testing of DoD materiel, weapons and weapons systems from concept through production within the acquisition cycle at three Major Range and Test Facility Bases: Yuma Proving Ground, AZ (to include management of Army natural environmental testing); Aberdeen Test Center, Aberdeen Proving Ground, MD; and White Sands Missile Range, NM (including the Electronic Proving Ground (EPG), Fort Huachuca, AZ). This program also provides the required developmental test capability at: Aviation Technical Test Center, Fort Rucker AL; Redstone Technical Test Center, Redstone Arsenal, AL; Cold Regions Test Center, Forts Greely and Wainwright, AK; Tropic Regions Test Center at Schofield Barracks HI; and a capability to provide for integrated test planning plus safety assessment/verification. Developmental test capabilities at each test range have been uniquely established, are in place to support test and evaluation (T&E) requirements of funded weapons programs, and are required to assure technical performance, adherence to safety requirements, reliability, logistics supportability, and quality of materiel in development and in production. Program funding includes efforts toward leveraging technologies to include procurement of essential equipment, personnel training and test facility modernization to support the warfighter's weapons and equipment. It also provides for leverage, integration and use of virtual and synthetic test tools/capabilities for reduction of test and program acquisition costs. Current testing capabilities are not duplicated within DoD and they represent baseline requirements to assure acceptable risk to the soldier as new technologies emerge into fielded weapons systems. As part of the DoD RELIANCE initiative, the Army (via this program) has committed at the highest senior service levels to be the lead agency for ground vehicles, gun munitions, electric guns, and surface-to-air missiles. This initiative is currently supported by the services Vice Chiefs of Staff in their role as the Test and Evaluation Board of Directors. This project finances indirect test operating costs not billable to test customers, replacement of test equipment and test facility modernization projects to maintain current testing capabilities and improvements to safety, environmental protection, efficiency of test operations, and technological advances. This program does not finance reimbursable costs directly identified to a user of these ranges. Direct costs are borne by materiel developers and project/product managers in accordance with DoD Directive 7000.14R. October 1999.

B. Program Change Summary	FY 1999	FY 2000	FY 2001
Previous President's Budget: (FY 2000/2001 PB)	118571	137193	134335
Appropriated Value	119553	147193	
Adjustments to Appropriated Value			
a. Congressional General Reduction	-982		
b. SBIR/STTR	-1637		
c. Omnibus or Other Above Threshold Reduction		-321	
d. Below Threshold Reprogramming	3564		
e. Rescissions	-474	-387	
Adjustments to Budget Years Since FY 2000/2001 PB			-14678
Current Budget Submit (FY 2001 PB)	120024	146485	119657

Change Summary Explanation: Funding - FY 2001 - Operational funds for Airborne Engineering Evaluation Support Activity (AEESA) were transferred to PE 0602782A/A779 (-551). Additional funds were realigned to higher priority requirements (-14100); efforts originally planned for FY 2001 that these funds would have supported have been deferred to the outyears.

A. <u>Mission Description and Justification:</u> Effective 1 October 1999, the US Army Operational Test and Evaluation Command (OPTEC) was redesignated as the US Army Test and Evaluation Command (ATEC). The three subordinate commands assigned to ATEC are: the Army Evaluation Center (AEC), the Operational Test Command (OTC), formerly the Test and Experimentation Command (TEXCOM), and the Developmental Test Command (DTC), formerly the US Army Materiel Command's Test and Evaluation Command (TECOM). All functions and resources in this PE are managed by the Developmental Test Command.

Test technology provides critical front-end investments for development of new test methodologies, test standards, advanced test technology concepts for long range requirements, future test capabilities, and advanced instrumentation prototypes for DTC, which includes: Aberdeen Test Center (ATC), Aberdeen Proving Ground, MD; White Sands Missile Range (WSMR), NM (including the Electronic Proving Ground (EPG), Fort Huachuca, AZ); Yuma Proving Ground (YPG), AZ (including the Cold Regions Test Center (CRTC), Forts Greely and Wainwright, AK and the Tropic Test Site at Schofield Barracks, HI); Aviation Technical Test Center (ATTC), Fort Rucker, AL; Redstone Technical Test Center (RTTC), Redstone Arsenal, AL; and Dugway Proving Ground (DPG), UT. These capabilities support the streamlined development and fielding cycle of the Medium Brigade as well as Army Vision 2010 and Joint Vision 2010 initiatives. Within this element, a major initiative called Virtual Proving Ground (VPG) is directed towards integrating Modeling, Simulation, and Internetting technologies into the test and evaluation process to support acquisition streamlining and to offset significant downsizing and budget reductions. VPG will significantly improve the ability of the Army to provide early influence on system design, reduce test costs and time, and extend the envelope of information to reduce risk and acquisition costs. This initiative is critical to achieving long-term efficiencies not only within the Test and Evaluation (T&E) mission to offset funding and manpower reductions already taken, but also within the acquisition process at large by conforming to the Simulation and Modeling for Acquisition, Requirements, and Training (SMART) and Simulation Based Acquisition (SBA) processes. Sustaining instrumentation maintains existing capabilities at DTC test facilities by replacing unreliable, uneconomical and irreparable instrumentation, as well as incremental upgrades of instrumentation and software, to assure adequate test data collection capabilities

# **FY 1999 Accomplishments:**

15686 CONTINUED SUPPORT OF DTC VIRTUAL PROVING GROUND (VPG):

ATC: Initiated development and integration of High Level Architecture-compliant models and simulations with ground truth data. Continued development of performance databases, direct fire control models to calculate gun-pointing error for the M1 series of tracked vehicles and system

Project D628 Page 1 of 10 Pages Exhibit R-2 (PE 0605602A)

interfaces to support virtual testing of fire control and ground vehicle systems. Continued funding of the cooperative Technology Program Annexes (TPA) with the Army Research Lab to support development and integration of fire control and ground vehicle simulations. Continued development of

#### FY 1999 Accomplishments: (continued)

an engineering model to support tri-service development and evaluation of common simulation systems. Initiated development of a bridge-crossing simulator to perform bridge performance and endurance testing by simulating heavy vehicle crossings.

ATTC: Initiated development and integration of high fidelity aviation models and simulations required to conduct virtual testing. Completed development of a virtual test range to integrate various system models (such as the Comanche aircraft model), virtual terrain, and threat models to conduct virtual flight visualization testing. Continued development of a physics-based helicopter simulation, in cooperation with the Comanche program, to conduct test and evaluation of the potential flight hazards associated with integration of new components into the aircraft.

DPG: Initiated procurement of computer workstation and software to conduct virtual testing. Developed a smoke/obscurant model in the visible spectrum to predict dispersion characteristics under various live test conditions. Conducted integration of the 4D Weather System at YPG to perform micro/meso-scale weather analyses and forecasts which provide increased range efficiencies and enhanced range safety. Completed development of a software model to conduct virtual chemical, biological, and aerosol testing.

RTTC: Continued to acquire high resolution, three dimensional, validated terrain, target, cultural features, human and smoke/obscurant models in the visible, mid-wave infrared and long-wave infrared spectrums to develop a virtual component/subsystem test capability for small missile systems with open-loop and closed-loop non-destructive testing of imaging Infrared/Millimeter Wave (IR/MMW) Seekers and small missile systems. Completed development of small missile ground truth databases. Developed a 3-D smoke and obscurant model in the IR spectrum to generate and inject scenes for the Electro-Optics Sensor Flight Evaluation Lab (EOSFEL). Completed support to Project Constellation, a distributed virtual test capability across multiple DTC test centers, which included development of standard architectures, networks, and validation/accreditation procedures. Developed an electromagnetic model to measure the susceptibility parameters of various anti-tank and non-line-of-sight missiles. Continued acquisition of computer hardware and software to conduct virtual testing.

WSMR: Continued acquisition of computer hardware and software required to conduct virtual large missile and C4I testing. Completed development of Command, Control, Communications, Computers and Intelligence (C4I) and Electronic Warfare (EW) simulation testing capabilities that replace expensive airborne jammers with simulators that inject actual threat waveforms into the test items which will significantly reduce test costs, test time, and provides test repeatability. Continued development of virtual reality mission planning for large missile systems. Completed development of a fiber optic link between the test range and software simulation laboratory. Completed development of an Airblast Survivability Model for Comanche. Completed support for Project Constellation that included development of standard architectures, networks, and validation/accreditation procedures. Acquired software to reconfigure the High Performance Computing (HPC) mainframe computer to servers that will provide real-time control of test resources. Completed development of terrain and ground truth databases. Completed development of software tools to simulate C4I systems and battlefield electromagnetic characteristics.

Project D628 Page 2 of 10 Pages Exhibit R-2 (PE 0605602A)

# ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit) BUDGET ACTIVITY 6 - Management and Support PE NUMBER AND TITLE 0605602A Army Test Technology and Sustaining Instrumentation OATE February 2000 PROJECT D628

YPG: Developed a comprehensive virtual desert terrain database that incorporates digital mapping data, soil characteristics, and terrain characteristics. Completed development of aviation fire control and line of sight models to characterize turreted weapon systems in an Air-to-Air firing environment. Developed an enhanced virtual range to support and incorporate multi-weapon test scenarios. Initiated acquisition of computer hardware and software to conduct virtual testing. Developed software models to conduct virtual shock and vibration testing of howitzers.

#### FY 1999 Accomplishments: (continued)

21133 CONTINUED DEVELOPMENT, ACQUISITION AND SUSTAINMENT OF CRITICAL TEST INSTRUMENTATION AND EQUIPMENT.

ATC: Continued development of test site integration which consists of electronically linking test site instrumentation such as Weibel radars, ballistic test site terminals, digital flash x-rays cameras, Hadland high-speed photography cameras, and various types of environmental instrumentation to monitor toxic fumes and gases with an ATC test control facility to conduct test control, monitoring and real-time data analysis and review. Continued development of autonomous vehicle control and test range traffic monitoring systems. Continued acquisition of computer workstations to conduct data processing and analysis. Continued development of a combined Developmental Test (DT)/Operational Test (OT) vehicle instrumentation package. Continued development of vehicle endurance/performance test data analyzers.

ATTC: Acquired inertial measurement units to measure aircraft altitude, angular rates and acceleration rates. Acquired airborne recorder interface units to simultaneously record and reproduce multiple aircraft data channels.

DPG: Acquired gas chromatograph workstations, mini Chemical Agent Monitors and software to conduct real-time monitoring and detection of chemical agents.

RTTC: Completed development of an acoustic flight vibration capability to reduce the number of costly missile test flights. Completed upgrade of the laser tracker hardware and software to provide accurate and reliable Time Space Position Information (TSPI) data. Continued acquisition of power amplifiers that are required to generate Electromagnetic Radiation environments used in physical environments testing. Installed high speed, high bandwidth fiber optic network to link the RTTC test ranges/facilities with the Army Aviation and Missile Command (AMCOM) Research Development Engineering Center (RDEC).

WSMR: Continued to upgrade a single station laser tracker. Continued development of an instrumentation platform to remotely collect, analyze, transmit and log C4I message traffic. Continued software upgrade of the Drone Formation Control System autopilot, control, navigation and guidance systems. Congressional funding was provided to initiate acquisition of telemetry, range timing, operations control, data display, communications and video relay equipment and instrumentation to provide a smooth transition of range control from the old Range Control Center to the new Cox Range Control Center. Upgraded a suite of optical tracking instrumentation with high-resolution video cameras. Upgraded the Command Destruct System for remote control capability IAW personnel downsizing and safety assurance initiatives. Procured two spare cables, a spare target trolley, and instrumentation to replace damaged equipment at the Aerial Cable Range. Upgraded core radar and telemetry instrumentation to improve missile tracking accuracy and reliability. Congressional funding was provided to continue development of an existing Small Business Innovative Research project which predicts missile debris dispersion and analyzes the impact to commercial aircraft traversing the range.

YPG: Continued acquisition of mobile, portable, and base station trunked land radio units. Developed a scoring sensor suite for turreted gun systems on rotary wing aircraft (munitions from .50 caliber to 30mm). Completed development of a gun pointing vector instrumentation package. PROTOTYPE INSTRUMENTATION AND ADVANCED CONCEPTS. Provided quick reaction capability to respond to emergency requirements, provided support for technical committees forging future instrumentation technology developments, and maintained/improved existing capability by

replacement and limited upgrade of worn out, obsolete or unserviceable equipment/instrumentation at Army technical test ranges. Developed prototype instrumentation and performed advanced concept studies for development of new technologies. Continued to develop Test Operations

#### FY 1999 Accomplishments: (continued)

Procedures (TOPs) and International Test Operations Procedures (ITOPs) to ensure quality and consistency of test results throughout Army and for international cooperative applications.

HQDTC: Provided management support for Virtual Proving Ground (VPG) across the command to ensure commonality, conduct strategic planning, and develop roadmaps. Provided command-level oversight and technical management support for the DTC instrumentation program. Technical support included requirements development, project prioritization, and execution of investment accounts for Small Business Innovative Research, Production Base Support, Army Test Technology and Sustaining Instrumentation, Major Test and Evaluation Investment, and the Central Test and Evaluation Investment Program. Continued to provide management and support costs for direct interface with the T&E Executive Agent, management of needs and solutions calls for T&E Reliance oversight, and support to the Army TERIB co-chair and the Army principal on the T&E Board of Operating Directors. Provided administrative support for the Local Area Network and TECNET, contracts, patents, symposia and conferences, exhibits and printing. Continued funding support to the Joint Program Office (JPO) for Test and Evaluation under the tri-service Executive Agent for Test and Evaluation.

Total 41726

# FY 2000 Planned Program:

11330 CONTINUE SUPPORT OF VIRTUAL PROVING GROUND (VPG):

ATC: Continue development and integration of High Level Architecture-compliant models and simulations with ground truth data. Continue development of performance databases, direct fire control models to calculate gun-pointing error for the M1 series of tracked vehicles and system interfaces to support virtual testing of fire control and ground vehicle systems. Continue funding of the cooperative Technology Program Annexes (TPA) with the Army Research Lab to support development and integration of fire control and ground vehicle simulations. Continue development of an engineering model to support tri-service development and evaluation of common simulation systems. Complete development of a bridge-crossing simulator to perform bridge performance and endurance testing by simulating heavy vehicle crossings.

ATTC: Continue development and integration of high-fidelity aviation models and simulations required to conduct virtual testing. Continue development of a physics-based helicopter simulation to conduct test and evaluation of the potential flight hazards associated with integration of new components into the aircraft. Initiate development of a database management system to store, access, aggregate, and manipulate aircraft performance data.

DPG: Continue procurement of computer workstations and software to conduct virtual testing. Conduct integration of the 4D Weather System at ATC to perform micro/meso-scale weather analyses and forecasts which provide increased range efficiencies, enhanced range safety, and significantly upgraded project support, i.e., test windows (acceptable weather conditions) and reduced setup/teardown times for instrumentation. Initiate development of validated model to replicate a chemical/biological point detection system.

#### FY 2000 Planned Program: (continued)

13650

RTTC: Continue to acquire high resolution, three dimensional, validated terrain, target, cultural features, human and smoke/obscurant models in the visible, mid-wave infrared and long-wave infrared spectrums to develop a virtual component/subsystem test capability for small missile systems with open-loop and closed-loop non-destructive testing of imaging Infrared/Millimeter Wave (IR/MMW) Seekers and small missile systems. Continue acquisition of computer hardware and software to conduct virtual testing. Initiate development of a standardization process to integrate various software components (synthetic environments, databases, data repositories, models, and interfaces) to support virtual testing. Develop 2-D visible and IR scenes to drive the scene projectors and signal injection interfaces in the Electro-Optics Target Acquisition, Electro-Optics Sensor Flight Evaluation and IR Simulation Test Acceptance test facilities.

WSMR: Continue acquisition of computer hardware and software required to conduct virtual large missile and C4I testing. Continue development of virtual reality mission planning for large missile systems. Develop a system to merge telemetry, optics, radar, Global Positioning Systems (GPS), and TSPI data to support mission analysis of large missile and air defense system test data. Initiate development of an architecture to rehost existing C4I legacy test tools to support Army testing and training requirements. Initiate development of a highly mobile, miniaturized, high speed/high capacity data communications network to support various tactical environments and different tactical vehicles without test personnel intervention.

YPG: Continue acquisition of computer hardware and software to conduct virtual testing. Initiate development of a test control simulation tool which integrates actual field instrumentation data with existing simulations and models to conduct test range management, test setup, simulation model validation and test result validation.

INITIATE/CONTINUE DEVELOPMENT, ACQUISITION AND SUSTAINMENT OF CRITICAL TEST INSTRUMENTATION AND EQUIPMENT.

ATC: Continue development of test site integration which consists of electronically linking test site instrumentation such as Weibel radars, ballistic test site terminals, digital flash x-ray cameras, Hadland high-speed photography cameras, and various types of environmental instrumentation to monitor toxic fumes and gases with an ATC test control facility to conduct test control, monitoring and real-time data analysis and review. Continue development of autonomous vehicle control and test range traffic monitoring systems. Continue acquisition of computer workstations to conduct data processing and analysis. Continue development of an enhanced DT/OT on-board vehicle instrumentation package. Continue development of vehicle endurance/performance test data analyzers. Initiate development of an acoustic soldier-system instrumentation suite to measure and record field test data. Initiate development of a laser target scoring system to measure supersonic/subsonic projectiles. Initiate development of a measurement system to measure shock levels generated by munitions on combat vehicles. Upgrade the real-time x-ray system to maximize detection of defects in materials, ammunition, and ammunition components.

Project D628 Page 5 of 10 Pages Exhibit R-2 (PE 0605602A)

# ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit) BUDGET ACTIVITY 6 - Management and Support Instrumentation DATE February 2000 PROJECT 0605602A Army Test Technology and Sustaining D628

ATTC: Complete acquisition of airborne recorder interface units to simultaneously record and reproduce multiple aircraft data channels. Initiate upgrade of the helicopter icing spray system by replacing the bleed air and water delivery systems to ensure that the spray level characteristics are identical to natural clouds. Initiate acquisition of pre-flight instrumentation checkout equipment.

#### **FY 2000 Planned Program: (continued)**

DPG: Initiate acquisition of aerodynamic particle sizers that are used to measure aerosol clouds that are produced during all field tests of biological agent detectors. Initiate acquisition of portable thermometers to conduct atmospheric boundary layer tests for dispersion field-testing. Acquire a test data storage array to support chemical, biological, smoke and obscurant testing.

RTTC: Continued acquisition of power amplifiers that are required to generate Electromagnetic Radiation environments used in physical environments testing. Initiate procurement of automated matrix switching devices and programmable conditioning equipment to allow insertion of flight test data into hardware-in-the-loop and six degree-of-freedom simulators. Acquire signal conditioning units and transducers to upgrade data acquisition instrumentation. Initiate acquisition of digital data recorders and receivers to receive, record, and display missile flight performance data. Acquire inertia measurement system to measure missile system physical characteristics. Initiate development of a six degree of freedom motion simulator to perform non-destructive testing of small missiles. Continue acquisition of a high speed, high bandwidth fiber optic network to link the RTTC test ranges/facilities with the AMCOM RDEC.

WSMR: Continue conversion of an optical tracker system to single station laser tracker. Continue development of an instrumentation platform to remotely collect, analyze, transmit and log C4I message traffic. Continue software upgrade of the Drone Formation Control System autopilot, control, navigation and guidance systems. Continue acquisition of telemetry, range timing, operations control, data display, and video relay equipment and instrumentation to provide a smooth transition of range control from the Range Control Center to the new Cox Range Control Center. Initiate development of a high speed/high capacity wireless data communication network to support data collection, analysis and reduction of C4I test data. Complete upgrade of a suite of optical tracking instrumentation with high-resolution video cameras. Continue development of an existing Small Business Innovative Research project which predicts missile debris dispersion and analyzes the impact to commercial aircraft traversing the range.

YPG: Continue acquisition of mobile, portable, and base station trunked land radio units. Upgrade the MPS-36 radar to provide precision tracking data and to control other down range instrumentation (such as Kineto Tracking Mounts and other short-range radars) near the impact point for artillery and smart munitions testing. Initiate acquisition of data recorders, sensors and telemetry equipment to collect aerodynamic and flight dynamic data for airdrop systems. Acquire transmitters, antennas and repeaters to link remote test sites Cold Regions Test Center (CRTC). Initiate acquisition of data loggers, radios, modems and sensor test equipment at CRTC. Replace old, obsolete computer systems to support high data rate, real-time data collection.

#### FY 2001 Planned Program: (continued):

DPG: Continue acquisition of portable thermometers to conduct atmospheric boundary layer tests for dispersion field-testing. Acquire atmospheric dispersion thermometers and process logic controllers to collect field test data from mini-cams. Replace obsolete chemical equipment used to conduct safety air monitoring, hazardous waste characterization, and sample analysis. Replace an old, obsolete fermentor/containment chamber to ensure that highly pathogenic microorganisms are not released into the atmosphere.

RTTC: Continued acquisition of power amplifiers that are required to generate Electromagnetic Radiation environments used in physical environments testing. Continue acquisition of automated matrix switching devices and programmable conditioning equipment to allow insertion of flight test data into hardware-in-the-loop and six degree-of-freedom simulators. Continue development of a six degree of freedom motion simulator to perform non-destructive missile testing. Continue acquisition of a high speed, high bandwidth fiber optic network to link the RTTC test ranges/facilities with the AMCOM RDEC. Initiate acquisition of a digital real-time imaging system, which consists of a test item handling system capable of handling ATACMS size motors, a digital real-time x-ray imaging and enhancement system capable of creating 3D computed tomographic images, and a programmable logic controller for automating the motion control of the test item, to inspect missile systems and components to detect defects or lose components.

WSMR: Continue conversion of an optical tracker system to single station laser tracker. Continue development of instrumentation platform to remotely collect, analyze, transmit and log C4I message traffic. Continue software upgrade of the Drone Formation Control System autopilot, control, navigation and guidance systems. Continue acquisition of telemetry, range timing, operations control, data display, and video relay equipment and instrumentation to provide a smooth transition of range control from the Range Control Center to the new Cox Range Control Center. Continue development of the high speed/high capacity wireless data communication network to support data collection, analysis and reduction of C4I test data. Initiate acquisition of portable 406-420MHz radios to comply with the National Telecommunications and Information Administration directive to migrate to 12.5 kHz bandwidth radios. Initiate acquisition of test control and analysis workstations at Launch Complexes 32, 33, 38, and 50. Initiate acquisition of a film to videotape transfer system. Initiate development of an optical data measurement system to provide highly accurate post-test TSPI and miss distance data in support of air defense and large missile testing.

YPG: Continue acquisition of mobile, portable, and base station trunked land radio units. Complete upgrade the MPS-36 to provide precision tracking data and to control other down range instrumentation (such as Kineto Tracking Mounts and other short-range radars) near the impact point for artillery and smart munitions testing. Continue acquisition of data recorders, sensors and telemetry equipment to collect aerodynamic and flight dynamic data for airdrop systems. Continue acquisition of data loggers, radios, modems and sensor test equipment at CRTC. Initiate upgrade of two portable Weibel tracking radars that will be used to control optical trackers and provide data for the mobile mission control center.

PROTOTYPE INSTRUMENTATION AND ADVANCED CONCEPTS. Provide quick reaction capability to respond to emergency requirements, provide support for technical committees forging future instrumentation technology developments, and maintain/improve existing capability by replacement and limited upgrade of worn out, obsolete or unserviceable equipment/instrumentation at Army technical test ranges. Continue to develop Test Operations Procedures (TOPs) and International Test Operations Procedures (ITOPs) to ensure quality and consistency of test results throughout Army and for international cooperative applications.

# ARMY RDT&E BUDGET ITEM JUSTIFCATION (R-2 Exhibit) BUDGET ACTIVITY 6 - Management and Support Instrumentation DATE February 2000 PROJECT 0605602A Army Test Technology and Sustaining D628

4956 HQ DTC: Provide management support for VPG across the command to ensure commonality, conduct strategic planning, and develop roadmaps. Provide command-level oversight and management support for the DTC instrumentation program. Technical support includes requirements development, project prioritization, and execution of investment accounts for Small Business Innovative Research, Production Base Support, Army Test Technology and Sustaining Instrumentation, Major Test and Evaluation Investment, and the Central Test and Evaluation Investment Program. Provide management and support costs for direct interface with the T&E Executive Agent, management of needs and solutions calls for T&E Reliance oversight, and support to the Army TERIB co-chair and the Army principal on the T&E Board of Operating Directors. Provide administrative support for the Local Area Network and TECNET, contracts, patents, symposia and conferences, exhibits and printing. Continue funding support to the Joint Program Office (JPO) for Test and Evaluation under the tri-service Executive Agent for Test and Evaluation.

A. <u>Mission Description and Justification</u>: This Program Element (PE) funds activities and functions to conduct objective and integrated survivability and lethality analyses (SLA) for all major and designated non-major Army systems. The analyses quantify the effects of electronic warfare (EW) and ballistic battlefield threats and meteorological conditions on Army individual soldiers and systems. This PE also funds vulnerability assessments of digitized systems for Force XXI.

The work is accomplished through threat research, theoretical and engineering analyses, signature measurements, modeling, simulations, laboratory experiments, and field investigations. Activities in progress include assessment of the effects of atmospherics, passive countermeasures, tactics, lasers, high-power microwave, electro-optical/radio frequency (EO/RF) jammers, electromagnetic environment effects (E3), information warfare (IW), decoys, and conventional ballistics on Army soldiers and systems. The PE work efforts provide U.S. Army decision makers, materiel and combat developers, system users, and independent evaluators critical soldier and system survivability analyses that quantify the soldier/system's survivability effectiveness in battlefield threat environments. Recommendations are provided to the materiel and combat developers on how to mitigate soldier/system deficiencies and enhance their survivability.

This PE funds civilian salaries, travel, development and maintenance of equipment and facilities, general management, administrative and contractor support required for program execution. The U.S. Army Research Laboratory (ARL) Survivability/Lethality Analysis Directorate (SLAD) conducts this effort.

identified, and recommendations are made to Program Executive Officers and Program Managers (PEOs/PMs) to provide hardening fixes early in program development. Work is accomplished through threat research, theoretical and engineering analyses, laboratory experiments, models, simulations, and field investigations. This effort also supports HQDA, independent evaluators, and PEOs/PMs with technical expertise in electronic warfare (EW), ballistics, and meteorology to conduct special studies and to support Test Integration Working Groups (TIWGs), weapon system program reviews, acquisition documentation reviews, and Government testers. This project also provides oversight of the Army's Electromagnetic Environmental Effects (E3) Program. Horizontal Technology Integration systems include 2nd Generation FLIR (2nd GEN FLIR), Battlefield Combat Identification System (BCIS), Global Positioning System (GPS), and Enhanced Position Location Reporting System (EPLRS). Advanced Technology Demonstration initiatives include Hit Avoidance, Precision Guided Mortar Munition, Tank Extended Range Munition, Tactical Command and Control Protect (TCCP), Guided Multiple Launch Rocket System (MRLS) and Future Scout and Cavalry System (FSCS). Proposed survivability enhancements to weapon platforms include advanced armament technologies, defensive aide suites (DAS), missile countermeasure devices (MCD), emerging propellant technologies, advanced propulsion systems, advanced electronics, and improved spall liners in combat vehicles.

#### **FY 1999 Accomplishments:**

- 2864 Conducted EW vulnerability investigations and analyses which supported integrated survivability and lethality analyses of advanced 2nd and 3rd generation emerging technology and horizontal technology applications. 1463 Performed ballistic effects investigations and survivability/lethality analyses of emerging technologies on future system designs, advanced armors (active protection systems), advanced armaments (electric armaments and Electro thermal chemical), advanced propellants, and advanced vehicle
- propulsion. Conducted vulnerability analysis of Army's digitized battlefield systems to radio frequency (RF) weapons. Identified possible countermeasure to threat RF weapons. Supported the Army E3 program.

A. <u>Mission Description and Budget Item Justification</u>: This program performs all engineering functions essential for certifying the airworthiness of assigned Army aircraft. Performs safety-of-flight investigations/assessments and issues messages to the field. Manages/executes the Army's Aeronautical Design Standards (ADS) Program; ADS is a continuously evolving process incorporating revisions for each change to the standard design of an aircraft system. Manages airworthiness approval of new vendor qualification/testing on fielded aircraft and material changes for all assigned Army aircraft systems. Provides airworthiness-engineering support to the Army Aviation Program Executive Office (PEO) and the Army Aviation and Missile Command Program/Project/Product Manager requirements for major development/modification and any future system/subsystems. Manages the test and evaluation process to support airworthiness qualification of developmental and fielded aircraft systems. This project funds activities required for general research and development support of aircraft qualifications. Since these activities are not allocable to specific R&D missions, this project is appropriately funded in Budget Activity 6.

#### **FY 1999 Accomplishments:**

- 919 Executed technical and airworthiness qualification mission for PEO Aviation/force modernization aircraft systems.
- 921 Conducted safety-of-flight investigations/assessments to include PEO Aviation/force modernization aircraft systems.
- 143 Executed the Army Aeronautical Design Standards Program.
- Provided continuing engineering support for technology upgrades to PEO Aviation/force modernization aircraft systems.
- 201 Provided test management capability for PEO Aviation Program/Project/Product Managers.

Total 2878

# FY 2000 Planned Program:

- 990 Manage/execute technical and airworthiness qualification mission for PEO Aviation/force modernization aircraft systems.
- 940 Continue to ensure safety-of-flight investigations/assessments to include PEO Aviation/force modernization aircraft systems.
- 150 Manage/execute the Army Aeronautical Design Standards Program.
- 732 Provide continuing engineering support for technology upgrades to PEO Aviation/force modernization aircraft systems.
- 157 Continue to provide test management capability for PEO Aviation Program/Project/Product Managers.
  - 41 Small Business Innovative Research/Small Business Technology Transfer Program (SBIR/STTR)

D128 Meteorological Support to TECOM Activities	6539	68	23 6927	6856	7027	9810	10014	Continuing	Continuing

**A.** <u>Mission Description and Justification:</u> Effective 1 October 1999, the US Army Operational Test and Evaluation Command (OPTEC) was redesignated as the US Army Test and Evaluation Command (ATEC). The three subordinate commands assigned to ATEC are: the Army Evaluation Center (AEC), the Operational Test Command (OTC) formerly the Test and Experimental Command (TEXCOM), and the Developmental Test Command (DTC) formerly the US Army Materiel Command's Test and Evaluation Command (TECOM). All functions and resources in this PE are managed by the Developmental Test Command.

Project D128 provides standard and specialized weather forecasts and data for test reports to satisfy Army/DoD RDT&E-unique test requirements for modern weaponry, i.e., (1) unique atmospheric analysis and sampling to include atmospheric transmittance, extinction, optical scintillation, infrared temperature, aerosol/smoke cloud dispersion characteristics, ballistic meteorological measurements, snow characterization and crystal structure; (2) unique consultation forecasting to include prediction of sound propagation for ballistic tests, specialized prediction of light level and target to background predictions for electro-optical testing and ballistic meteorology; (3) advisory and warning products such as go-no-go advisories for ballistic and atmospheric probe missiles, smoke obscurant tests, hazard predictions for chemical agent munitions disposal, simulated nuclear blasts, and weather warnings for range/test safety. Provides technical support to Army Program Executive Officers (PEOs), Project Managers (PMs) and the Army test ranges and sites at: White Sands Missile Range (WSMR), NM (including the Electronic Proving Ground (EPG), Fort Huachuca, AZ); Dugway Proving Ground (DPG), UT; Aberdeen Test Center (ATC), APG, MD; Redstone Technical Test Center (RTTC), Huntsville, AL; Yuma Proving Ground (YPG), AZ (including the Cold Regions Test Center (CRTC), Fort Greely, AK); Ft Belvoir, VA; Ft A.P. Hill, VA; Cold Regions Research and Engineering Laboratory (FY99), Hanover, NH and Deseret Chemical Depot, Tooele, UT. Develops methodologies and acquires instrumentation/systems that allow meteorological teams to support current and future Army/DoD RDTE requirements. This PE finances indirect meteorological support operating costs not billable to customers and replacement/upgrade of meteorological instrumentation. Direct costs for meteorological support services are not funded by this PE, but are borne by the customer (i.e. materiel/weapons developers and project/product managers).

#### **FY 1999 Accomplishments:**

- 2258 Provided indirect costs for generating weather forecasts, severe weather warnings/advisories, staff meteorological services, and atmospheric measurements in support of Army/DoD tests and projects at 11 Army sites/test ranges and off-range test sites.
- 3245 Modernized operational equipment to meet customer requirements for meteorological support.
  - Installed and maintained Major Range Test Facility Base (MRTFB) Four-Dimensional Weather (4DWX) System at ATC and completed installation at WSMR. 4DWX is a leading-edge, predictive meteorology system that synthesizes national and real-time range meteorology data sets into very high-resolution analyses and forecasts (to 1.1Km resolution) in time and space. This capability leads the science of meteorology internationally, and provides unparalleled meteorological test support.

M541 Materiel Systems Analysis	9557	8783	8737	6673	6518	6370	6622	Continuing	Continuing

A. Mission Description and Justification: This program element funds the Army Materiel Systems Analysis Activity's (AMSAA) primary mission of materiel systems analysis. AMSAA is the Army's center for item/system level performance analysis and certified data. In accomplishing its materiel systems analysis mission, AMSAA analyzes the performance and combat effectiveness of conceptual, developmental, and existing systems. Unique models and methodologies have been developed to predict critical performance variables, such as, weapon accuracy, target acquisition, rate of fire, probability of inflicting catastrophic damage, and system reliability. AMSAA is responsible for the generation of these performance and effectiveness measures and for ensuring their standard use across Army and Joint studies. AMSAA conducts and supports various systems analyses, such as: analyses of alternatives (AoAs), system cost/performance tradeoffs, early technology tradeoffs, weapons mix analyses, and requirements analyses. These analyses are used by Army and Department of Defense (DoD) leadership in making acquisition, procurement, and logistics decisions in order to provide quality equipment and procedures to the soldiers. AMSAA's modeling and simulation (M&S) capabilities support the development, linkage, and accreditation of live, virtual, and constructive simulations, and provide unique tools that support systems analysis of individual systems and the combined-arms environment. AMSAA is the Army's executive agent for the verification, validation, and accreditation (VV&A) of item level performance models. In this role, AMSAA assists model developers with the development and execution of V&V plans to ensure new models and simulations faithfully represent actual systems. As the Army's center for materiel systems analysis, AMSAA provides the technical capability to support Army and DoD decision-makers throughout the entire materiel acquisition process in responding to analytic requirements across the full spectrum of materiel system comm

#### **FY 1999 Accomplishments:**

Developed and certified system performance data for U.S. and foreign systems used to support Army and Joint AoAs, force structure studies, and theater level studies. Examples of programs where decisions were influenced: Future Scout and Cavalry System (FSCS), Comanche, Crusader, and Digitization Brigade and Below (DB2). Analyzed the performance and combat effectiveness of materiel systems and tech base programs in support of HQDA, AMC, PEOs/ PMs and R&D Centers. Included were conduct of and support to: AoAs, system cost/performance tradeoffs, early technology tradeoffs, weapons mix analyses, requirements analyses, technology insertion, and technology base analyses. Examples of programs where decisions were influenced: Future Combat Vehicle (FCV), FSCS, Crusader, High Mobility Multipurpose Wheeled Vehicle (HMMWV), and Grizzly. Developed, modified, and maintained item level methodologies, models, and simulations to assist in the conduct of systems analysis. Examples of efforts included: Ground Wars Model, Active Protection System/Counter-Active Protection System (APS/CAPS) methodologies, and One Semi-Automated Force (OneSAF). Performed verification and validation of item level performance models and methodologies. Funding supported approximately 100 civilians to include salary, benefits, and all other support costs (e.g., training, TDY, etc.).

A. <u>Mission Description and Justification:</u> Acquisition/Exploitation of Threat Items: This is a continuing project for acquisition and exploitation of foreign materiel constituting potential advanced technology threats to U.S. systems. The primary aim of this project is to maximize the efficiency of research and development for force and materiel development by reducing the uncertainties concerning these threats. The project also answers general scientific and technical intelligence requirements, aids in the development of countermeasures to threat materiel and threat technology, and provides materiel for realistic testing and training. Acquisitions and exploitations are executed according to an Army Foreign Materiel Review Board and with the approval of the Army Deputy Chief of Staff for Intelligence (DCSINT).

### **FY 1999 Accomplishments:**

- 792 Acquired threat systems identified and prioritized in the FY 1999 Army Foreign Materiel Program (FMP) Five Year Plan.
- 2198 Initiated, continued, or completed exploitation projects on ground systems of Army interest identified in the FY 1999 Army FMP Exploitation Plan.
- 892 Initiated, continued, or completed exploitation projects on missile systems of Army interest identified in the FY 1999 Army FMP Exploitation Plan.

Total 3882

### FY 2000 Planned Program:

- 1712 Acquire threat systems identified and prioritized in the FY 2000 Army Foreign Materiel Program (FMP) Five Year Plan.
- 2300 Initiate, continue, or complete exploitation projects on ground systems of Army interest identified in the FY2000 Army FMP Exploitation Program.
- 110 Small Business Innovative Research/Small Business Technology Transfer

Total 4112

### FY 2001 Planned Program:

- 1324 Acquire threat systems identified and prioritized in the FY 2001 Army Foreign Materiel Program (FMP) Five Year Plan.
- 2258 Initiate, continue, or complete exploitation projects on ground systems of Army interest identified in the FY 2001 Army FMP Exploitation Plan.

A. Mission Description and Budget Item Justification: On 1 October 1999, the US Army Operational Test and Evaluation Command (OPTEC) was redesignated as the US Army Test and Evaluation Command (ATEC). The three subordinate commands assigned to ATEC are: the Army Evaluation Center (AEC), the Operational Test Command (OTC), formerly the Test and Experimental Command (TEXCOM), and the Developmental Test Command (DTC), formerly the US Army Materiel Command's Test and Evaluation Command (TECOM). This program finances the operational testing of developmental materiel systems. Project DV02 provides for the recurring costs of operating the test activities of the U.S. Army Operational Test Command (OTC). The FY 1999 program reflects completed restructure directed by OSD of manpower and funds for the Army Threat Support Activity (ATSA), Test and Evaluation Coordination Offices (TECO's), Test and Evaluation Support Activity and other test support previously programmed and budgeted in the Operation and Maintenance, Army (OMA) appropriation. Project D001 provides for direct operational and joint test costs incurred by OTC including Multi-Service, Army Transformation, First Digitized Division and Automated Information Systems (AIS). Excludes funding for Acquisition Category I (ACAT I) major weapons and Automated Information Systems which are programmed within the PE funding development of each system. Project D987 provides for development and acquisition of non-major and sustaining instrumentation necessary to attain and maintain the data collection and analysis capability to conduct credible and robust operational tests as demanded by the DoD and Congress. It provides for replacement and improvements of existing obsolete inventory and for the development of new technologies to keep abreast of new weapons advancements.

Mission Description and Justification: This project finances the direct costs of planning and conducting operational testing on major and non-major materiel systems (ACAT II-IV), including Multi-Service systems (all ACATs), Joint Tests (JT), Army Transformation, First Digitized Division (FDD) and Automated Information Systems (AIS). It funds those costs directly attributable to conducting early user tests and evaluations (EUTE), limited user tests (LUT), or initial operational tests and evaluations (IOTE) on major and non-major materiel systems. Test funding for ACAT I systems is programmed within the PE funding the development of each system. Operational testing is conducted under conditions as close as possible to those encountered in actual combat with typical user troops trained to employ the system. ATEC provides Army leadership with an independent test and evaluation of effectiveness, suitability, and survivability of the system.

D987 ATEC Instrumentation Sustainment & Development	4836	590	6162	6551	6647	7564	8314	Continuing	Continuing

Mission Description and Justification: This project provides for the technical upgrade and maintainability of essential instrumentation to achieve cost effective data collection, telemetry, and processing capability for support of robust and credible operational tests as required by the DoD and Congress. Increased sophistication of new weapons and communication and control systems demands the ability to capture test data at greater rates and increased volumes and then to reduce the information rapidly to only those essential to effectively evaluate the test. As digitization of the battlefield continues, this effort allows ATEC to modernize and develop its non-major instrumentation allowing it to be less intrusive, more reliable and more robust in terms of integrating combat simulation capability into operational tests. The goal is to expand measurement and test control capability while still reducing future test costs. This project supports multiple efforts associated with MAIS and separate, independent initiatives that lead to improved command and control, increased mobility, expanded remote data collection at various tactical sites with transmit capability to central receiving, control, and evaluation stations at various test directorates, and new instrumentation capability in support of Real-Time Casualty Assessment (RTCA) which measures simulated attrition of forces during simulated battlefield engagements. Operational test directorates are located at Fort Hood, TX; Fort Bliss, TX; Fort Huachuca, AZ; Fort Sill, OK; and Fort Bragg, NC.

### **FY 1999 Accomplishments:**

• 1048 Test Tracking Systems (Telemetry and Imaging)

A. <u>Mission Description and Budget Item Justification:</u> On 1 October 1999, the US Army Operational Test and Evaluation Command (OPTEC) was redesignated as the US Army Test and Evaluation Command (ATEC). The three subordinate commands assigned to ATEC are: the Army Evaluation Center (AEC), the Operational Test Command (OTC), formerly the U.S Army Materiel Command's Test and Evaluation Command (TECOM). Project D302 funds the Army Evaluation Center (AEC) mission of evaluation and test design. AEC is the Army's technical and operational evaluator of developmental systems and tests for all Army acquisition programs. AEC provides integrated technical and operational evaluations and life-cycle continuous evaluation for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive and force development. AEC develops the evaluation strategy, designs technical and operational tests, and evaluates the test results to address the effectiveness, suitability, and survivability factors pertinent to the decision process, such as: Critical Operational Issues & Criteria (COIC), system performance, soldier survivability, performance in countermeasures, system survivability, reliability, supportability, etc. AEC has a lead role in the planning and execution of the Army live fire tests and evaluations through its evaluation and test design responsibilities. This project funds the salaries of civilian employees assigned to the evaluation and test design missions and associated costs including temporary duty, support contracts, supplies and equipment. This project does not finance test facility operations, test instrumentation or test equipment.

### FY 1999 Accomplishments:

• 26248 Provided integrated technical and operational evaluations and continuous evaluation for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive and force development. Developed the evaluation strategy, designed technical and operational tests and evaluated the test results to address the Effectiveness, Suitability, and Survivability factors pertinent to the decision process. As the Army lead for Live Fire Test and Evaluation, planned and executed the Army Live Fire Test and Evaluation program for developmental systems. Prepared integrated System Evaluation Plans and conducted integrated technical and operational evaluations for all Army weapon systems including M1A2-SEP (Abrams), MH-47E Aircraft, and Tactical Unmanned Aerial Vehicle (TUAV). Effort included costs for 171 civilian authorizations.

A. <u>Mission Description and Budget Item Justification</u>: This program funds the continued operation of non-Army Management Headquarters Activities (AMHA) management and administrative functions at U.S. Army Research, Development and Standardization Groups overseas, Army Research, Development, Test, and Evaluation (RDTE) commands, centers and activities required to accomplish overall assigned general research and development missions and international research and development not directly related to specific research and development projects. Project M881 reflects a glide path in response to Army infrastructure drawdown initiatives. The Standardization Groups play an integral role in the U.S. Army efforts for international cooperative research & development and interoperability and fulfill international memorandum of understanding requirements (especially the American, British, Canadian and Australia mission).

### **FY 1999 Accomplishments:**

- Provided continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDTE commands, centers and activities.
- 3502 Continued operation of five Standardization Groups in support of international R&D and rationalization, standardization and interoperability missions. Funded salaries, travel and contracts for non-Department of State administrative support.
- 7322 Continued to provide acquisition management functions in support of USAMRMC RDTE programs and its tenant organizations, Ft. Detrick, MD, including medical materiel procurement contracts and procurement of biological defense vaccines. Fund the operation of HQ, USAMRMC activities that administer the medical research, development, and acquisition program to sustain military technology superiority.
- Funded Y2K compliance support. 1133

A. Mission Description and Budget Item Justification: This program provides for upgrading the accuracy, timeliness, availability, and accessibility of scientific, technical, and management information at all levels of Army Research and Development (R&D). This includes initiatives to improve information derivation, storage, access, display, validation, transmission, distribution, and interpretation. This program addresses the need to increase the competitiveness and availability of scientific, engineering, and technical skills in the DoD and National workforce. It accomplishes this through outreach programs that provide direct working experience for high school students in Army laboratories, thereby exposing these students to the working world of science and engineering. Funding under this program provides for the conduct of analyses, using behavioral science-based analytic tools, to provide policy and decision makers with soldier oriented recommendations concerning manpower, personnel and training issues. This program also provides for science advisors to Commanders-in-Chief (CINCs) and major Army commands and engineering teams to directly solve field Army technical problems. Coordination of this program with other Services is achieved through interservice working groups. The work in this program element is consistent with rigorous peer review and the Army Science and Technology Master Plan (ASTMP). These programs are accomplished under the management of the Army Research Laboratory, the Army Materiel Command, the Army Research Office, the Army Research Institute, the Army Corps of Engineers and the Information Management Office.

Exhibit R-2 (PE 0605803A)

ARMY RDT&E BUDGET ITE	EM JUS	M JUSTIFICATION (R-2A Exhibit)						February 2000		
BUDGET ACTIVITY 6 - Management and Support							PROJECT DC16			
COST (In Thousands)	COST (In Thousands) FY1999 FY Actual Est				FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
DC16 Field Assistance in Science and Technology	2588	263	32 2487	2533	2577	2625	2671	Continuing	Continuing	

Mission Description and Justification: This program focuses Army Materiel Command (AMC) resources to rapidly identify and solve field Army technical problems affecting improved readiness, safety, training, and operations and support (O&S) cost reductions. The Commanding General, AMC, institutionalized AMC Field Assistance in Science and Technology (FAST) in 1988 to plan for and allocate all AMC FAST program funding for projects to support CINCs and commanders and to operate the director's office. FAST tours provide major professional growth for scientists and engineers. Science advisers are recruited from AMC engineering centers to serve Commanders-in-Chief (CINCs) and major Army commanders worldwide and are supported by assigned Quick Reaction Coordinators (QRCs) within each AMC engineering center. All costs associated with science advisor assignments are funded by AMC subordinate commands that supply the science advisers for two to three year tours. FAST manages a level of effort type project with most projects recouping many times their cost in O&S cost savings. Many of the efforts in this Project are on-going activities to support Army RD&A programs.

### **FY 1999 Accomplishments:**

- 2588
- 2588 Conducted research to provide rapid technological solutions to problems identified and prioritized by CINCs worldwide. Specific examples follow.
  - Science Advisors deployed to Bosnia and Macedonia to evaluate Force Protection measures and to Latin America in support of humanitarian and counter narcotics efforts.
  - Exploited numerous technologies to reduce Army O&S costs: battery management, reduction of rust and corrosion, waste oil reutilization, and extending tire life.
  - Increased capabilities to conduct Force Projection Operations by developing the Flyaway Kit (prepackaged computer, data and communications equipment), the Remotely Operated Weather Station, and Machine-Assisted Language Translations.
  - Increased training capabilities by developing the Laser Aimed Scoring System (permits accurate appraisal of Apache helicopter missile practice) and a 40mm Blank Training Round to improve force-on-force infantry training.
  - Provided professional growth opportunity for 20 Army senior science advisors and Army junior scientists and engineers (two- to eight-week Army laboratory tours) through the Field Assistance in Science and Technology (FAST) Program.
  - Provided professional growth opportunity for civilian personnel through the Scientists and Engineers Field Experience with Soldiers (SEFEWS) program, which gives scientists and engineers the opportunity to participate in training events in the field.

Project DC18 Page 5 of 17 Pages Exhibit R-2A (PE 0605803A)

ARMY RDT&E BUDGET ITE	ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)									000
BUDGET ACTIVITY  6 - Management and Support  PE NUMBER AND TITLE  0605803A Technical Information Activ								vities	PROJECT <b>M720</b>	
COST (In Thousands)	FY 200 Estimat		FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
M720 Technical Information Functional Activities	2	2852	3659	3720	3781	4016	4205	Continuing	Continuing	

Mission Description and Justification: Technology transfer activities to support acquisition, storage, and utilization of technical information for both military and domestic applications. Activities supported are: Army participation in the Technology Seminar Game; Defense Technical Information Center (DTIC) Work Unit Information Summary (WUIS) database; Army support for the Federated Laboratory Consortium (FLC); the Army Science Board; administration of the Army's Small Business Innovative Research (SBIR) and Small Business Technology Transfer Pilot Program (STTR) in accordance with the "Small Business Research and Development Enhancement Act of 1992". These costs are funded here because the Act prohibits use of PE 0605502 for funding administrative costs, studies and analyses to support the Acquisition Corps acquisition and retention of scientists and engineers and improvement of productivity of laboratories and centers. Technology transfer activities make technical information available to both the public and private sectors to reduce duplication in R&D programs and to increase competitiveness in the U.S. business community. In addition, this project provides funding for patent fees and patent legal expenses for all U.S. Army Materiel Command (AMC) subordinate commands and laboratories. The requirement to fund this effort is a result of the Omnibus Budget Reconciliation Act requiring the U. S. Patent and Trademark Office to become a completely user-fee funded agency. Most of the efforts in this Project are on-going activities to support Army RD&A programs.

### **FY 1999 Accomplishments:**

- 5468 Provided managerial, programming, database, clerical and personnel support to process, store, control and report the WUIS, and Form 1498's.
  - Provided Army funding support for Federated Laboratory Consortium as required by Public Law 99-502.
  - Provided administrative and contractual support for the Army Science Board.
  - Provided administrative support for the Army's SBIR and STTR programs.
  - Provided Army Science and Technology Reports.
  - Provided funding for patent fees and patent legal expenses for AMC commands and laboratories.
  - Provided funding for Army Science and Technology Summer Study and awards.
  - Provided funding for Technology and Materiel Game.
  - Provided funding for Independent Assessment.

5468 Total

### FY 2000 Planned Program:

- 2783 Provide Army funding support for Federated Laboratory Consortium as required by Public Law 99-502.
  - Provide administrative and contractual support for the Army Science Board.
  - Provide administrative support for the Army's SBIR and STTR programs.
  - Provide Army Science and Technology Reports.
  - Provide funding for patent fees and patent legal expenses for AMC commands and laboratories.

Mission Description and Justification: This project supports development of decision aids, databases, and automation support for the management and execution of the Army Research, Development, Test and Evaluation (RDTE) Appropriation. It includes the hardware, software and contractor support required to develop and implement a set of management decision aids, databases, and hardware/software tools to support technical and budgetary decisions at the Office, Secretary of Defense (OSD); Department of the Army (DA), including support of the Army Science and Technology Master Plan; Corps of Engineers; Army Materiel Command (AMC); and Army Research Laboratory. This project includes support of the Acquisition Management Integration Subgroup (AMIS) dealing with acquisition management systems. Most of the efforts in this Project are on-going activities to support Army RD&A programs.

### FY 1999 Accomplishments:

2714 - Administered S&T database computer engineering support contract.

- Supported Army S&T strategic planning, analysis, and prioritization.

- Supported AMC database and Defense Reliance management.

- Provided guidance and policy relative to the content, utilization, and requirements of current and future acquisition management systems for AMIS.

Total 2714

#### FY 2000 Planned Program:

2845 - Administer S&T database computer engineering support contract.

- Support Army S&T strategic planning, analysis, and prioritization.

- Support AMC database and Defense Reliance management.

- Provided guidance and policy relative to the content, utilization, and requirements of current and future acquisition management systems for AMIS.

5 - Small Business Innovative Research / Small Business Technology Transfer (SBIR/STTR) Programs.

Total 2920

#### **FY 2001 Planned Program:**

5273 - Administer S&T database computer engineering support contract.

- Support Army S&T strategic planning, analysis, and prioritization.

- Support AMC database and Defense Reliance management.

Total 5273

ARMY RDT&E BUDGET ITI	EM JUS	TIFICA	ATION (R	-2A Exh	ibit)		DATE <b>Fe</b>	February 2000		
BUDGET ACTIVITY 6 - Management and Support	TITLE <b>Technica</b>	rle echnical Information Activities				PROJECT M729				
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate		FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
M729 Youth Science Activities	2010	22	213 2089	2127	2168	2209	2252	Continuing	Continuing	

Mission Description and Justification: Supports science activities to encourage over 100,000 high school youths to develop interest and achieve higher levels in science, engineering, and mathematics. These activities are consolidated within this program to "present the Army" to a potential pool of technical talent to fill future Army needs. No other program fulfills this long-range Army goal. The joint Army/Navy Washington regional area Science and Engineering Apprenticeship Program (SEAP) has been included in the overall effort. This provides an eight-week hands-on learning experience for high school students working with bench level scientists within Army laboratories in hopes of encouraging more of them to enter scientific fields of study in the future. This program enhances the National Laboratory Science and Engineering pool, which in turn supports Defense industry, and laboratory needs. Most of the efforts in this Project are on-going scientific outreach activities to foster interest in Army RD&A programs.

### **FY 1999 Accomplishments:**

- 2010
- Fostered high school student interest nationally in science, mathematics, engineering and computer science by sponsoring Junior Science and Humanities Symposia (JSHS), International Science and Engineering Fairs (ISEF), International Mathematics Olympiad (IMO), and Research and Engineering Apprenticeship Program (REAP).
  - Co-sponsored joint Army/Navy Washington Regional Area SEAP.
  - Conducted a special tutorial program for Native Americans, African Americans, and Spanish-speaking Americans, known as the United Introduction to Engineering (UNITE) program, designed to increase their chances of attending and completing engineering and/or science curriculum at the university level.
  - Conducted the West Point cadet research internship program to enhance cadet training through field experience within Army research laboratories and centers.

Total 2010

### FY 2000 Planned Program:

- 2154 Foster high school student interest nationally in science, mathematics, engineering and computer science by sponsoring JSHS, ISEF, IMO, and REAP.
  - Conduct the joint Army/Navy Washington Regional Area SEAP and increase Army Laboratory/Research, Development and Engineering Center (RDEC) sponsorship of students.
  - Conduct a special tutorial programs for Native Americans, African Americans, and Spanish-speaking Americans, the UNITE program, designed to increase their chances of attending and completing engineering and/or science curriculum at the university level.
  - Conduct West Point cadet research internship program to enhance cadet training through field experience within Army research labs and centers.
  - 59 Small Business Innovative Research / Small Business Technology Transfer (SBIR/STTR) Programs.

COST (In Thousands)	FY1999 Actual	FY 2000 Estimat	-	Y 2001 stimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost		
D730 Personnel and Training Analysis Activities	1967	20	047	2188	2228	2273	2379	2446	Continuing	Continuing		

Mission Description and Budget Item Justification: This project provides for the application of behavioral science-based analytical technologies by the U.S. Army Research Institute (ARI) for the Behavioral and Social Sciences to current and near-term training, leadership, and soldier-related (TLS) issues. The program is focused on policy issues to enhance soldier performance, and provides the Army a unique capability for addressing such issues as the effects of training on individual and unit readiness, the personnel costs of alternative force structures, and the effects of a smaller Army on retention and readiness of quality soldiers. Requirements for studies and analyses for critical personnel and training issues of immediate importance are solicited on an annual basis.

### **FY 1999 Accomplishments:**

- 1967
  - 1967 Completed assembly of data on the backgrounds and enlistment expectations of new recruits as the first step in understanding training-base attrition.
    - Identified key topics of concern and conducted interviews with senior Army leaders on how they have managed change as the Army transitions to the first all-digital division
    - Identified issues and alternative courses of action for distributed training development activities.
    - Completed interviews with Joint Readiness Training Center (JRTC) analysts to examine the feasibility of a centralized training analysis and feedback system to support multiple exercises at separate training sites.
    - Completed interviews with experienced leaders and Observer-Controllers on the benefits of live-fire exercises at JRTC.
    - Completed book on "The Elements of Training Evaluation" which describes the necessary conditions for making valid inferences about the effectiveness of Army training.

Total 1967

### FY 2000 Planned Program:

- 1998 Develop an approach for evaluating the capabilities of virtual simulation to represent the tasks and missions within a given military application.
  - Establish a procedure to map soldiers' required information technology knowledge across a spectrum of career management fields.
  - Design a relational database consisting of commander and key leader insights on managing changes to the Army's first all-digital division.
  - Compare job performance of Battle Staff NCOs completing their job preparation course by distance learning, with a comparable group completing the course by the traditional classroom method.
  - Evaluate the Army's new Enlisted Personnel Allocation System for assigning new recruits to Military Occupational Specialties.
  - Conduct in-depth study to determine reasons why soldiers leave the Army during the initial entry training phase of their enlistment.
  - Determine the impact of the Army Continuing Education System on personnel retention, job proficiency, and career progression.

BUDGET ACTIVITY 6 - Management and Support	l Informa	tion Acti	vities		PROJECT <b>M735</b>				
COST (In Thousands)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
M735 Net Assessment Directorate	772	76	7 764	762	758	772	788	Continuing	Continuing

Mission Description and Justification: The Net Assessment Directorate develops and coordinates net assessments of the standing, trends and future prospects for U.S. military capabilities and military potential in comparison with those of other countries or groups of countries to identify emerging or future threats or opportunities for the United States. This includes, as required, net assessments of: (1) current and projected U.S. and foreign military capabilities by theater, region, function, or mission; and (2) specific current and projected U.S. and foreign capabilities, operational tactics, doctrine, and major categories of weapon systems. The Directorate supports preparation of net assessments by the Chairman of the Joint Chiefs of Staff; develops, advises, and consults on the net assessment potion of the Annual Report of the Secretary of Defense to the President and Congress; provides guidance and staff assistance in developing national net assessments by the National Security Council and acts as the primary Office of the Secretary of Defense (OSD) focal point for joint efforts with the Intelligence Community to produce net assessments; and provides support for the improvement and development of net assessments within the Department of Defense. Many of the efforts in this Project are on-going activities to support Army RD&A programs.

### **FY 1999 Accomplishments:**

- 772
- Developed alternative scenarios for geopolitical future of Eurasia. Drawing on country and functional expertise, identified key actors, trends, and discontinuities that could reshape the character of interstate interactions and pose new challenges or opportunities for US defense policy.
  - Synthesized extensive research program on "transformation strategy," i.e., identifying issues and options for US and foreign country transitions from

present day military organizations and equipment inventories to a very different military 25 years hence.

- Analyzed challenges to US military superiority that could stem from eroding US advantages in space, stealth, precision navigation, information operations, biotechnology, and other areas, and developed potential strategies for preserving US superiority in light of such challenges.
- Supported net assessment of future US power projection capabilities as challenged by "anti-access" strategies and forces of potential opponents.

Total 772

### FY 2000 Planned Program:

- 747 Des
  - Design and build comparative, time-series databases to support net assessments of military functions of likely increasing importance. Candidates include long-range precision strike systems and anti-access systems.
    - Support net assessment of the military use of space, assessing foreign country and commercial developments that may confer military advantage on potential opponents, and prospect that US space systems' military contribution will be undermined by foreign measures or enhanced by new technologies.

M858	Army Explosives Safety Management Program	0	0	497	497	496	496	496	Continuing	Continuing

A. Mission Description and Justification: This Program Element supports continuing technology investigations. It provides a coordinated tri-service mechanism for the collection and free exchange of technical data on the performance and effectiveness of all non-nuclear munitions and weapons systems in a realistic operational environment. It provides for NATO interchangeability testing; joint munitions effectiveness manuals used by all services; development of standardization agreements (STANAGS) and associated Manuals of Proof and Inspection (MOPI); operation of the North American Regional Test Center (NARTC); evaluation of demilitarization methods for existing conventional ammunition; evaluation of useful shelf life, safety, reliability and producibility of pyrotechnic munitions; and improvement of explosives safety criteria for DOD munitions via the DOD Explosives Safety Board. Pyrotechnic Reliability and Safety (M296) supports pyrotechnic research, development and testing to identify, characterize and resolve reliability, safety, storage and manufacturing issues that impact production availability and field use of pyrotechnics. It will result in the development and demonstration of new, safe, reliable and environmentally acceptable munitions. Munitions Survivability and Logistics (D297) will make Army units more survivable by testing and demonstrating munitions logistics system solutions that prevent or minimize catastrophic explosive events and accelerate ammunition resupply. The Army Explosives Safety Management Program (M858) is a new start for FY 2001. The U.S. Army Technical Center for Explosives Safety will use the funds in this project to evaluate current explosives safety standards, using risk management philosophy to develop new, scientific and risk-based standards to meet U. S. Army explosives requirements.

### FY 2001 Planned Program:

489

Total

•	90	Continue to staff, equip and maintain the NARTC for 9mm, 5.56mm, 7.62mm and 12.7mm

- 105 Continue to maintain standardization of previously qualified calibers, including the 25mm
- 130 Continue facilitation of NARTC for 40mm standardization testing
- 65 Complete 12.7mm qualification testing
- 35 Participate in D/14 working group, 25/40mm Panel of Experts and 5.7mm Group of Experts
- Continue activities associated with standardization of Advanced Soldier Systems

ARMY RDT&E BUDGET ITE	February 2000								
BUDGET ACTIVITY 6 - Management and Support									PROJECT <b>M857</b>
COST (In Thousands)	FY 1999 FY 2000 Actual Estimate			FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
M858 Army Explosives Safety Management Program	0		0 497	497	496	496	496	Continuing	Continuing

Mission Description and Justification: This project supports the U.S. Army's explosives safety program. Many existing Army explosives safety standards in manufacturing, testing, transportation, maintenance, storage, and disposal are based on limited accident investigation data. The U.S. Army Technical Center for Explosives Safety will use the funds in this project to support the Army's explosives safety program by conducting research and testing to evaluate current explosives safety standards, using risk management philosophy to develop new, scientific and risk-based standards to meet U.S. Army explosives requirements in AR 385-64 and DA PAM 385-64.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program: Project not funded in FY 2000

## FY 2001 Planned Program:

- 448 Conduct testing on strategic configured loads (SCL) to assess safety hazards in deployment operations
- 49 Initiate testing of earth-covered magazines with electrically isolated floors to assess lightning hazards to stored ammunition

A. Mission Description and Justification: This program ensured that resources were available to fund actions specifically required to protect or enhance natural and cultural resources, preserve access to improved and unimproved training areas, and make necessary repairs to minimize erosion and otherwise rehabilitate lands and waters at Army RDTE installations, laboratories and test ranges. It focused on compliance with natural and cultural resource laws and on responsible management of natural and cultural resources to ensure resources are used wisely and are protected. It financed studies and surveys to identify, inventory, and manage natural (endangered or threatened species, other wildlife, timber, agricultural lands, training areas, etc.) and cultural resources and evaluation of the resources so identified and inventoried; Integrated Training Area Management; preparation of natural and cultural resource management plans; design, construction, maintenance or repair costs specifically required to restore, improve or maintain natural or cultural resources; supplies and equipment required to carry out applicable natural and cultural resources management activities. It included appropriated RDTE funds attributable to fish, wildlife, agricultural outleasing and timber management activities. It does not include normal maintenance required for appearance, including landscaping, or normal building maintenance associated with present day, non-cultural uses of historic buildings. Army defines environmental effort as: Class O - Project needed to cover essential administrative, personnel, and other costs required to manage environmental activities and monitor environmental conditions associated with compliance. Class I - support compliance with legally binding agreements or judgments under applicable Federal, State, local or host nation natural or cultural resource environmental laws; correct deficiencies cited in an inspection or notice of violation by a natural or cultural resource regulatory agency, or host nation eq

A. Mission Description and Budget Item Justification: This program funded the non-research portion of the Army's RDTE funded environmental pollution prevention program. The program also funded test and evaluation pollution prevention efforts addressing environmental compliance and mission readiness issues affecting Army weapon systems; supporting industrial facilities; and RDTE funded installations, laboratories and test ranges. Pollution prevention was any action designed to reduce or eliminate (rather than control or treat), through source reduction actions, the procurement and use of hazardous materials and the generation of hazardous waste; more efficient use of natural resources; recycling; and/or reduced emissions of toxins and other waste to the environment. Acquisition pollution prevention addressed the adverse impact of hazardous materials and hazardous waste on the operational readiness of Army weapon systems and facilities. Issues included prove-out/engineering of alternatives to (1) ozone-depleting chemicals and (2) hazardous and toxic chemicals and materials used in weapon system fire protection, cooling and refrigeration applications, manufacturing and maintenance processes and specialized test practices throughout the weapon system life cycle. These activities account for approximately 90 percent of the hazardous waste generated by the U.S. Army. This program included the review and revision of standardized technical documentation containing design, procurement and maintenance requirements, and procedures supporting materiel procurement such as the Joint Group for Acquisition Pollution Prevention. Projects under this program met Army definitions: Class O - Projects needed to cover essential administrative, personnel, and other costs required to manage environmental activities and monitor environmental condition associated with compliance; Class I - support compliance with legally binding agreements or judgments under applicable federal, state, local or host nation environmental laws; Class II - p

Mission Description and Justification: Develop and implement the Army Acquisition Pollution Prevention program to reduce requirements for hazardous materials and toxic chemicals used throughout the weapon system life cycle. The program supports Army compliance with the Montreal Protocol, the Clean Air Act, the Pollution Prevention Act and Executive Order 12856 (and others). This program primarily funds test and evaluation of environmentally acceptable alternative materials and processes used in weapon system design, testing, production, maintenance, operation and support. Issues directly affecting operational readiness of weapon systems and supporting facilities take top priority. Support is also provided for the Joint Group for Acquisition Pollution Prevention.

#### FY 1999 Accomplishments:

- Toxicological Assessment of Alternative New Materials
- 272 Program Management and Oversight
- 1545 Test and Evaluation related to Ammunition/Munition Production
- 1105 Test and Evaluation related to Aviation and Missile Production
- 132 Test and Evaluation related to Electronics Production and Support
- 500 Test and Evaluation related to Track and Wheeled System Production
- Test and Evaluation related to Soldier Systems and Biological, Chemical Defense
- 485 Process Support to Research and Test Activities
- 2060 Joint Group for Pollution Prevention

A. Mission Description and Budget Item Justification: This program ensured that resources were available to fund legally mandated environmental compliance activities at U.S. Army RDTE installations, laboratories and test ranges. It financed environmental staff salaries; minor construction, repair and upgrade of facilities to meet environmental standards, including waste treatment and disposal; radon abatement; repair and clean up of underground storage tank hazards; management of hazardous waste storage and disposal; permits and licensing fees; environmental training, plans and studies; and environmental monitoring and audits. Funded cost of complying with Federal Facility Compliance Agreements (FFCA) and other environmental agreements, and corrected notices of violation. It did not finance construction or repairs unrelated to environmental compliance or Defense Environmental Restoration Account (DERA) funded environmental restoration. In summary, this program provided for environmental quality control of current defense operations and disposal of hazardous waste incident to defense operations funded by the RDTE appropriation. Army defined environmental effort as: Class O - projects needed to cover essential administrative, personnel, and other costs required to manage environmental activities and monitor environmental conditions associated with compliance. Class I - supported compliance with legally binding agreements or judgments under applicable federal, state, local or host nation environmental law; corrected deficiencies cited in an inspection or notice of violation by a regulatory agency, or host nation equivalent; corrected deficiencies where a statutory or regulatory deadline has passed; Class II - projects required to comply with an established standard, and deadline for compliance is in the future; Class III - salaries and training for environmental personnel and projects required to maintain/improve environmental quality, but where non-compliance is not imminent. In FY2000, Environmental Compliance w

A. <u>Mission Description and Justification:</u> This is not a new start. The program represents a zero sum transfer from Program Element OMA 0408854. The Army Acquisition Pollution Prevention Program (A2P3) funds test and evaluation replacement materials and processes to eliminate or reduce hazardous materials and toxic chemicals procured, used, generated and disposed of throughout the weapon system life cycle. Hazardous materials and toxic chemicals used during weapon system design, testing, production, operation and support adversely affect operational readiness and increase total ownership cost. Through the reduction of hazardous materials and toxic chemicals, production, operation and support costs and disposal liability costs for weapon systems and supporting facilities will be reduced. Weapon system cost reduction (with near-term payback) and performance enhancements are major parameters influencing selection and funding of projects. Army participation in the Joint Group for pollution Prevention and development of single process initiatives is included. The A2P3 supports Army compliance with Montreal Protocol, the Clean Air Act, the Pollution Prevention Act and Executive Order 12856 (and others).

**FY 1999 Accomplishments:** Project funded in 0605854A M8PP.

FY 2000 Planned Program: Project funded in OMA PE 0408854. Army Acquisition Pollution Program (A2P3) RDTE activities suspended until FY01.

### FY 2001 Planned Program:

- 136 Toxicological Assessment of Alternative New Materials
- 170 Program Management and Oversight
- Test and Evaluation related to Ammunition/Munitions Production and Industrial Base Support
- 1145 Test and Evaluation related to Aviation and Missile Production and Support
- 347 Test and Evaluation related to Communication/Electronics Production and Support
- Test and Evaluation related to Track and Wheeled Vehicles Systems and Armaments Production and Support
- 688 Test and Evaluation related to Soldier Systems and Biological, Chemical Defense Production and Support
- 455 Process Support to Research and Test Activities
- 450 Joint Group for Pollution Prevention

M4WW Minor Construction - Corps of Engineers	458	0	0	0	0	0	0	0	0

A. <u>Mission Description and Budget Item Justification</u>: This program element financed activities and functions necessary to provide facility related minor construction for U.S. Army RDTE installations, laboratories and test ranges. Minor construction included: erection, installation, or assembly of a new real property facility; expansion, extension, alteration, conversion, relocation or replacement of an existing real property facility. Included design costs directly associated with accomplishing a designated project undertaking. These projects substantially prolonged the useful life of the facility and are all actually facility investments. In FY2000, Minor Construction was funded in the Operations and Maintenance, Army (OMA) appropriation.

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	-	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
M0WW Minor Construction - Test Ranges	2505		0 0	0	0	0	0	0	0

Mission Description and Justification: Financed RDTE minor construction projects for U.S. Army Materiel Command (AMC) technical test ranges assigned to Test and Evaluation Command (TECOM), i.e., Yuma Proving Ground, AZ; Aberdeen Proving Ground, MD; Dugway Proving Ground, UT; and White Sands Missile Range, NM. In addition, the project provided common service host support for over 100 tenants and satellites located on these four TECOM ranges. Facility assets managed include over approximately 4 million acres of land, over 24 million square feet of building space, 3 thousand miles of roads, and 2 thousand miles of utility lines.

#### **FY 1999 Accomplishments:**

- 1122 Funded minor construction projects at Aberdeen Proving Ground, MD
- 315 Funded minor construction projects at Dugway Proving Ground, UT
- 727 Funded minor construction projects at White Sands Missile Range, NM
- 341 Funded minor construction projects at Yuma Proving Ground, AZ

Total 2505

M4YY Maintenance and Repair - U.S. Army Corps of Engineers	2736	0	0	0	0	0	0	0	0

A. <u>Mission Description and Budget Item Justification</u>: This program element financed activities and functions necessary for maintenance and repair of real property at U.S. Army RDTE installations, laboratories and test ranges. Maintenance and repair of real property included applicable expenses of cyclic and preventive maintenance and annual recurring repair incurred by building trade shops, construction units, grounds and pavements units, machine shops and contracts. Funding also provided for modernization of utility systems. These projects substantially prolonged the useful life of the facility, and are all actually facility investments. In FY2000, Maintenance and Repair was transferred to the Operations and Maintenance, Army (OMA) appropriation.

B. Program Change Summary	FY 1999	FY 2000	FY 2001

**A.** <u>Mission Description and Budget Item Justification</u>: The Real Property Services program financed activities and functions necessary for operation of utilities (with the exception of communications). It included purchase of electricity, operations of heating plants and water distribution and sewage systems. This program also financed the labor associated with real property support along with fire prevention, custodial service contracts, collection and disposal of refuse, pest control management, snow/ice and sand removal. It also supported the engineering, general management, supervision, mapping, planning, utilization inspection and other activities of a general nature performed by the Directorate for Public Works (DPW), both in-house and by contract. In FY2000, Real Property Services was funded in the Operations and Maintenance, Army (OMA) appropriation.

Mission Description and Justification: This project funded the operations of utilities and other engineering services for the U.S. Army Materiel Command (AMC) installations assigned to the Test and Evaluation Command (TECOM), i.e. Aberdeen Proving Ground, MD; Dugway Proving Ground, UT; Yuma Proving Ground, AZ and White Sands Missile Range, NM. Funding provided for the utility costs and system operation of 1400 miles of electric distribution and 600 miles of water and sewer systems. Additionally, this project provided utilities services to the TECOM test mission and over 100 tenants and satellites that reside in 24 million square feet of facilities. Another major responsibility is the removal of snow and sand, extremely important to the safety of the workforce that travel on approximately 3000 mile road systems located on the TECOM installations. This account also funded the contracts for custodial and refuse collections and civilian firefighters responsible for the safety and health of the workforce that support the varied Army missions located on these installations.

#### FY 1999 Accomplishments:

- 35167 Funded operations of utilities and other engineering at Aberdeen Proving Ground, Maryland.
- 5900 Funded operations of utilities and other engineering at Dugway Proving Ground, Utah.
- 11262 Funded operations of utilities and other engineering at White Sands Missile Range, New Mexico.
- 4534 Funded operations of utilities and other engineering at Yuma Proving Ground, Arizona.
- 852 Funded Y2K compliance support.

#### DATE **ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)** February 2000 BUDGET ACTIVITY PE NUMBER AND TITLE 6 - Management and Support 0605896A Base Operations - Research, **Development, Testing & Evaluation** FY1999 FY 2000 FY 2001 FY 2002 FY 2003 FY2004 FY2005 Cost to Total Cost COST (In Thousands) Actual Estimate Estimate Estimate Estimate **Estimate** Estimate Complete Total Program Element (PE) Cost 233611 0 M0ZZ Base Operations - Army Materiel Command (AMC) Test Ranges 147428 0 0 0 0 M1ZZ Base Operations - AMC Major Subordinate Commands and 0 O 73768 0 O n 0 n Laboratories M4ZZ Base Operations - Corps of Engineers 12415 0 0 0 0

A. Mission Description and Budget Item Justification: The Base Operations (BASEOPS) program financed those activities and functions necessary for operating and maintaining U.S. Army RDTE installations, laboratories, test ranges and a significant tenant/satellite population. BASEOPS activities and functions included: (1) operation of post supply functions; (2) direct and general maintenance activities; (3) operation and maintenance of transportation equipment and local transportation; (4) operation of laundry and dry cleaning plants and contractual services where Army-owned plants are not operated; (5) Army food service program; (6) support to military and civilian personnel; (7) operation and administration of unaccompanied personnel housing; (8) command element activities required for commanding all Army units assigned or attached to the installation; (9) automation activities; (10) reserve component support; (11) development and administration of morale, welfare and recreation facilities and activities along with quality of life initiatives for the military and their families; (12) police and security services and counterintelligence; (13) resource management operations; (14) Defense Finance and Accounting Service (DFAS); (15) contracting operations; and (16) records management and publications. This is a labor intensive program, providing salaries and related personnel benefits for authorized civilian personnel and associated administrative support functions outlined above. Funding does not include dollars required for Commercial Activities (CA) study or implementation costs resulting from current CA reviews. In FY2000, Base Operations was transferred to the Operations and Maintenance, Army (OMA) appropriation.

A. <u>Mission Description and Budget Item Justification</u>: This program funds the Research, Development, Test and Evaluation (RDTE) Army Management Headquarters Activities (AMHA) for the U.S. Army Research Laboratory (ARL), Adelphi, MD. This program provides for (1) the development of policy and guidance, (2) long-range planning, (3) programming and budgeting, (4) management of resources (manpower and dollars), and (5) review and evaluation of program performance. This program also provides salaries and related personnel benefits for authorized civilian personnel and the associated administrative support (travel, supplies and equipment).

A. Mission Description and Justification: The Under Secretary of Defense (Acquisition and Technology) and the Army Acquisition Executive (AAE) directed the establishment of the Joint Land Attack Cruise Missile Defense Elevated Netted Sensor System (JLENS) Project Office (PO), for Land Attack Cruise Missile Defense (LACMD). This is a multiservice effort with the Army as the lead service. The JLENS PO is assigned to the AAE with operational control assigned to the U. S. Army Space and Missile Defense Command. The program mission is to maximize the battlespace of land, sea and air based missile systems by providing Over-the-Horizon (OTH) surveillance and precision track for broad area defense against land attack cruise missiles. JLENS is a theater based system employing advanced technologies with specific focus on LACMD. JLENS sensors provide the OTH surveillance/precision tracking for the Air Directed Surface to Air Missile (ADSAM) concept. The role of the JLENS is to expand the battlefield commander's surveillance and engagement capability against cruise missiles and other targets by extending the battle space for systems such as Patriot, Medium Extended Air Defense System(MEADS), Aegis and Advanced Medium Range Air-to-Air Missile (AMRAAM). This project supports upgrades to surveillance and tracking systems.

#### FY 1999 Accomplishments:

- 7500 Continued Contract Design and Demonstration Options with emphasis on prototype processing station.
- 1844 Other Contracts & OGA.
- 2056 JLENS In-House
- 1238 Test Bed Maintenance and Roving Sands Exercise.

Total 12638

#### FY 2000 Planned Program:

- 17123 Continue Contract Design and Development Activities.
- 4289 Other Contracts & OGA.
- 2381 JLENS In-House.
- 287 Test Bed Maintenance
- 642 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

**D.** Acquisition Strategy: The JLENS PO executed a successful Concept Studies Phase by soliciting Cruise Missile Defense (CMD) architecture concepts that employ elevated sensors. The JLENS PO through a formal selection process selected Hughes & Raytheon (H&R), a joint venture of Hughes Aircraft Company and the Raytheon Company (now Raytheon Systems Co.), as the prime contractor for the JLENS Demonstration Program. The JLENS program was required to restructure from a Design/ Development/Demo/Test program to an upfront demonstration program and to reduce annual outlays and delay individual radars and final system design. The new strategy requires incremental increases in capabilities and demonstrations leveraged on proven technologies. The program was restructured in October 1999.

A. Mission Description and Budget Item Justification: This Congressional interest project provides support to the Reserve Component Consequence Management (RC CoM) Program which is a priority Department of Defense program to support the civil authorities in combating domestic weapons of mass destruction (WMD) terrorism. The program derives its requirements and authority from Defense Reform Initiative Directive #25, approved by the Deputy Secretary of Defense on 26 January 1998. The RC CoM program is a key component of the United States strategy to deter, prevent, and defeat terrorism and provide a community-based defense to protect the homeland against asymmetrical threats. Presidential Decision Directive Number 62 reiterates the interagency commitment to the combating terrorism mission.

The military requirements associated with the program are to train, organize, equip, and exercise dedicated and mission task organized forces of the Reserve Component who are geographically dispersed across the United States. In FY 1999, the program raised ten Military Support Detachments (Rapid Assessment and Initial Detection); now known, as of January 2000, WMD Civil Support Teams; and began the enhancement of 127 Decontamination Detachments, 43 Nuclear/Biological/Chemical (NBC) Reconnaissance Detachments, and a RC Consequence Management Joint Task Force with functional missions such as medical, information, engineering, transportation, and security. For FY2000, Congress directed the raising of 17 additional WMD Civil Support Teams for a total of 27.

#### **FY 1999 Accomplishments:**

- Development of a technical information system to 'reach-back' from remote sites to a military information base and transfer data in support of interagency response organizations via the Unified Command Suite.
- 5300 National Guard WMD response interoperability with counterpart interagency first responder units, with emphasis on Distance Training Technology. An Advanced Technology Integration Demonstration (ATID) commenced on 12 August. The ATID objectives are to develop and demonstrate distributed learning technology to train the Reserve Component and counterpart interagency first responder forces in WMD response, in order to enhance interoperability and unity of effort. Prove the feasibility of delivering training through a large-scale test, which distributes training modules through existing and advanced communications and computer architecture.
- Military information and research support to the civil authorities.
- 1000 Develop a front-end analysis for advanced CB technological applications.
- Chemical/Biological database improvement.
- Interagency Board for equipment standardization, interoperability, and research and development.

Change Summary Explanation: Reflects the provisions of the FY00 Appropriations Conference Report, Sec 8111.

### C. Other Program Funding Summary: Not applicable

**D.** Acquisition Strategy: The program pursues a non-traditional acquisition strategy to defeat the asymmetric threat which the response forces face. The program intends to use common military and commercially available items to equip response forces. The program will source, instead of research, 'tried, true, and tested' equipment, which is interoperable with the Department's interagency partners. The development portion of this program will focus on fielding emerging advanced technologies with prototypical equipment which can be rapidly developed in eighteen to twenty-four months, or earlier. The program intends to provide the response forces with the finest available equipment and use advanced technological applications to provide the decisive edge to these forces, in order to fulfill it's mandated requirements and counter the asymmetric threats which the response forces are being trained, organized, equipped, and exercised to combat.

D2ET AFATDS Operational Test	3774	1943	0	0	0	0	0	0	9864

A. <u>Mission Description and Justification</u>: The Advanced Field Artillery Tactical Data System (AFATDS) will broaden and modernize the US Army fire support command, control and communications (C3) system. As a part of the Army Battle Command System (ABCS) architecture, AFATDS will provide automated fire support, fire planning and the coordination and employment of all service/combined fire support assets to complement the commander's scheme of maneuver. AFATDS will accomplish this by providing fully automated support for planning, coordination and control of all fire support assets (mortars, close air support, naval gunfire, attack helicopters, offensive electronic warfare, field artillery cannons, rockets and guided missiles) in the execution of close support, counterfire, interdiction, suppression of enemy air defense and deep operations. AFATDS will automatically implement detailed commander's guidance in the automation of operational planning, movement control, targeting, target value analysis and fire support planning. This project is a replacement system for the Initial Fire Support Automated System (IFSAS).

B. Program Change Summary	FY 1999	FY 2000	FY 2001

Mission Description and Justification: Project D322 – AFATDS Development: The project is composed of Army Battlefield Command System (ABCS) Common Hardware/Software (CHS) employed in varying configurations at different operational facilities (or nodes) and unique system software interconnected by tactical communications in the form of a software-driven, automated network. Both hardware and software will be capable of being tailored to perform the fire support command, control and coordination requirements at any level of command. This will permit variable command and control relationships and full fire support functionality at all echelons of field artillery and maneuver, from echelons above corps to battery or company in support of all levels of conflict. The Marine Corps will also utilize AFATDS. AFATDS will interoperate with Navy and Air Force Command and Control weapon systems as well as the Allied fire support systems ADLER (Germany), ATLAS (France), BATES (UK), and SIR (Italy).

#### FY 1999 Planned Program:

Acquisition Strategy: AFATDS software will be developed in incremental releases. AFATDS '96, previously named Version 1, received Materiel Release on 13 December 1996. It automated 51% of the required tasks including fire support planning, target nomination, order of fire, and meteorological/survey operations. Subsequent releases will add additional functions, providing automated capabilities for the required tasks including fire support sensor planning and additional munitions. Completion of AFATDS '04 will result in automation of all required functionality including full fire support planning, target acquisition support and field artillery mission support. FY05 will support continued efforts to address emerging weapon systems and interoperability requirements. Additionally, the completed software will utilize the Joint Common Operating Environment (JCOE) and the Joint Technical Architecture. AFATDS will support FDD/FDC and other Army Warfighter Experiments through FY 2004.

ARMY RDT&E BUDGET ITE	February 2000								
BUDGET ACTIVITY 7 - Operational System Development		0:	NUMBER AND 203726A Aystem		d Field Aı	rtillery Ta	actical Da		PROJECT <b>D2ET</b>
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate		FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D2ET AFATDS Operational Test	3774	194	43 0	0	0	0	0	0	9864

A. <u>Mission Description and Budget Item Justification</u>: Project D2ET – AFATDS Operational Test: This project finances the direct costs of planning and conducting operational testing and evaluation of the Advanced Field Artillery Tactical Data System (AFATDS) by the Army Test and Evaluation Command (ATEC). Limited User Tests (LUTs) are planned for AFATDS software releases in FY00, FY02, FY03 and FY04. LUTs are conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. ATEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system. AFATDS LUTs in FY01 and beyond will be funded from the ATEC Institutional Test line due to AFATDS redesignation as ACAT II.

#### FY 1999 Planned Program:

- 1648 Conduct AFATDS '98 LUT and evaluate test results
- 1308 Prepare for AFATDS '99 LUT
- 818 Prepare for and Support ABCS testing

Total 3774

#### **FY 2000 Planned Program:**

- 1564 Support AFATDS '99 LUT and evaluate test results
- 327 Prepare for and Support ABCS testing
- 52 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 1943

FY 2001 Planned Program: Funds moved to PE 0605712A, project 001 due to the redesignation of AFATDS to an ACAT II program.

**B. Other Program Funding Summary**: Not Applicable

C. <u>Acquisition Strategy</u>: Not Applicable

**A.** <u>Mission Description and Budget Item Justification</u>: This Program Element (PE) responds to vehicle deficiencies identified during Desert Storm, continues technical system upgrades, and addresses needed evolutionary enhancements to tracked combat (Abrams and Bradley) and tactical (Bradley FIST) vehicles. This PE provides combat effectiveness and Operating and Support (O&S) cost reduction enhancements for the Abrams Tank, through a series of product improvements to the current M1A1 and M1A2 vehicles. Additional improvements allow the M1A2 SEP tank to operate effectively with the M2A3 Bradley. This PE also addresses future product improvements to the M2A3, and the Abrams tank fleet.

## 7 - Operational System Development

# 0203735A Combat Vehicle Improvement Programs

ground combat system. The M1A2 System Enhancement Program (SEP) is the name given to the latest group or "block" of improvements funded under this project. SEP is an upgrade to the computer core that is the essence of the M1A2. It provides better microprocessors, color flat panel displays, more memory capacity, better Soldier-Machine Interface (SMI), and a new open operating system. An Under Armor Auxiliary Power Unit (UAAPU) was developed for potential future integration into the production M1A2 SEP. A new thermal management system dissipates the heat generated by the electronic components. The M1A2's formidable target acquisition capabilities will also be significantly enhanced with the 2nd Generation Forward Looking Infra-Red (2nd Gen FLIR) technology. Both the Gunner's Primary Sight (GPS) and the Commander's Independent Thermal Viewer (CITV) include the improved thermal imaging capabilities of the new FLIR technology.

The first M1A2 SEP production tank was delivered to the Government on 1 Sep 99. The M1A2 SEP tank will be capable of running the Army's Common Operating Environment (ACOE) software for digital communication with the rest of the combined arms team. ACOE software integration is funded in PE 0203758A. Its computer systems will also accommodate future growth without significant hardware changes. A program to digitize the M1A1 tank began in FY 1997. The development effort for this is being funded by PE 0203758A. An M1A2 Live Fire Testing Program is planned for fiscal years 2000-2003. Post SEP efforts will focus on improvements yielding significant life cycle cost reductions or survivability enhancements. In support of the new Army vision, a new engine will be developed for production and phased integration into the Abrams tank fleet. The objective is a lighter, more reliable, more fuel efficient, and easier-to-repair engine. The added FY2000 funding by PE 0603005A will allow this project to begin earlier. The Abrams Project Manager and the TRADOC System Manager (TSM) both support a re-capitalization effort that will accelerate development enough to complete the project by FY2003.

#### **FY 1999 Accomplishments:**

- 3074 Continued engineering and testing of hardware/software on tank, logistics, quality and other engineering efforts
- 2839 Provided Government Support/GFE
- 2856 Conducted Direct Support Electrical System Test Set (DSESTS) engineering efforts

Total 8769

#### FY 2000 Planned Program:

- 4033 Integration of embedded Battlefield Combat Identification System (BCIS) into the M1A2 SEP tank
- 100 M1A2 SEP contract completion costs
- 1400 Provide Government Support
- 500 Begin design of improved engine for the Abrams Family of Vehicles

## FY 2000 Planned Program: (continued)

- 6523 Begin M1A2 Abrams Live Fire and Survivability Test, including pre-shot analysis and start of test shots
- 9400 Begin engineering efforts to upgrade the Abrams engine
- 970 Begin lightweight vehicle track development
- 4159 Begin development of M1A2 test program sets, and Abrams 1<sup>st</sup> and 2<sup>nd</sup> generation health check system
- 8420 Begin program for redesign of turret and hull network boxes and built-in test embedded diagnostic program for the M1A1 fleet
- 982 Small Business Innovative Research / Small Business Technology Transfer Programs

C. <u>Acquisition Strategy:</u> The program office accepted the first Low Rate Production (LRIP) M7 ODS BFIST in Mar 99 from United Defense L.P. LRIP awards for years one and two have been awarded for a total of 49 systems. Production Verification Testing was successfully completed in Aug 99, with a combined BFIST/Striker IOTE scheduled for Apr 00. The Third and final LRIP award is planned for Mar 00. A Cost Plus Award fee (CPAF) contract to integrate the M7 BFIST fire support functionality onto the M3A3 chassis was awarded in Jul 99.

A. <u>Mission Description and Justification:</u> The Bradley A3 program upgrades a proven, tracked combat vehicle with digital command and control, increased situational awareness, enhanced lethality and survivability, and supportability/sustainability improvements. This project funds engineering and manufacturing development (EMD) of the Bradley A3. The effort develops and fully integrates digital electronics featuring a 1553 databus core electronic architecture and upgraded vehicle system software packages (command and control, navigation, communications, fire control, system/component diagnostics, and embedded training capabilities), 2nd Generation FLIR, and other systems/components into renovated (overhauled) Bradley A2s. Current plans call for conversion of 1109 Bradley A2s to the Bradley A3 configuration. Program has been extended with a current FUE of November 2000 and a MS III of 1 March 2001.

#### **FY 1999 Accomplishments:**

- 42251 Continue Design Engineering Effort
- 13422 Complete Live Fire and PQT Testing
- 2114 Project Management

Total 57787

#### FY 2000 Planned Program:

- 11086 Design closeout
- 986 Combat ID
- 978 Digitization
- 10108 Testing (IOTE)
- 952 Project Management
- Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 24777

FY 2001 Planned Program: Program not funded in FY 2001.

C. Acquisition Strategy: Milestone I/II for the Bradley A3 was held in FY94 and the program was approved for EMD. United Defense was subsequently awarded a Cost Plus Incentive Fee (CPIF) contract for development and integration of advanced A3 systems and components. Ten principal subcontractors, comprising approximately 33% of the contract cost, are participating in the EMD work effort. The first of eight prototypes was completed in 4QFY96; ten LRIP vehicles are currently undergoing contractor and government production qualification testing. Low Rate Initial Production (LRIP) procurements were awarded in FY 1997, FY1998 and FY 1999 with a fourth LRIP of 80 vehicles is scheduled for award 2QFY00. Limited User Testing and Live Fire Testing were completed in FY 1999. IOTE will be conducted in 4QFY00. A MS III decision is anticipated 2QFY01.

D718 Ground Combat Vehicle HTI	78	347 1212	5 12512	0	0	0	C	41418		

**A.** <u>Mission Description and Budget Item Justification</u>: Project D718, Ground Combat Vehicle Horizontal Technology Integration (HTI), is a project which was initiated in FY97 for the purpose of developing technology improvements which have application to or insertion opportunities across the spectrum of combat systems. These systems include the Abrams Tank, the Bradley Fighting Vehicle, the Crusader and others. This project funded the Suite of Survivability Enhancements Systems (SSES) beginning in FY97, the Flat Panel Display (FPD) program beginning in FY97 and funds the Common Ground Combat and Support Systems Architecture (GSA) program beginning in FY91. Note that efforts for the SSES program actually began in FY96 under project D661 before establishment of D718.

The SSES program is an HTI initiative to develop, produce and apply Hit Avoidance Technology to Army ground combat vehicles. The program was structured to integrate survivability sensors and countermeasures in a multi-phased effort determined by technological maturity and the availability of funding. Testing of Laser Warning Receivers (LWR) on the Bradley A3 vehicles was continued during FY99/00 with successful results. Funding for the SSES initiatives was discontinued in FY00.

The Field Emissive Display (FED) program, also known as the High Performance Flat Panel Display (FPD) technology development program, is an effort to develop common, multi-purpose displays for Army ground combat vehicles. This includes the capability for real time interpretation and application of command and control, target imagery and situation awareness information. The FPD will also provide common, multi-purpose, and high performance (low power, color, and sunlight readable, high-resolution) system displays. The application of the FPD supports the Force XXI Battle Command – Brigade and Below (FBCB2) operational requirement for the display of common imagery and data in removable and remote operations. In doing so, this program focuses on the near to mid-term opportunity to improve the performance of system displays for both tracked and wheeled combat and combat support vehicles. The high performance FPD program takes advantage of advanced display technologies under development by the Defense Advanced Research Projects Agency (DARPA) by incorporating changes to meet the requirements of ground systems. System display performance specifications will optimize industry standard interfaces allowing incremental and inexpensive upgrades for future information display requirements. This program has been funded through congressional plus-ups, with \$7.0M provided in FY97, \$12.0M in FY98 and \$8M in FY00.

CGA meets the critical need for a common digitization implementation across PEO GCSS vehicle platforms. The basis for the success of the Army's digitization effort lies with the ability to collect, process, and disseminate a common situational awareness picture throughout the battlefield. This in turn, is facilitated by a set of common digitization components. The CGA will define a common architecture to facilitate development and integration of common digitization components. Building upon the ongoing digitization efforts and lessons learned by PM's Abrams/Bradley/Crusader to integrate embedded and applique command and control products, the CGA will eliminate unnecessary roadblocks, promote development of common capabilities, facilitate integration, and minimize training and maintenance differences among platforms. As a new critical functionality is required to support the digitized force, these components/interfaces will provide a foundation for common and synchronized vehicle upgrades.

Other Program Funding Summary: None C. Acquisition Strategy: With regard to LWR effort, we used existing aviation programs and Bradley A3 vehicle testing as well as TARDEC and CECOM Tech Base efforts for the LWR performance specification development. In Phase I, the LWR and Commanders Decision Aid (CDA) were funded for production on the Bradley A3 using the aviation LWR production contract. Later, a fully competitive production contract was to be awarded for the A3. The LWR was to be fielded to the Bradley A3 by approval of an ECP to the vehicle system. In Phase II and beyond, as additional technologies matured, new production contracts were to be competitively awarded for their application to the appropriate vehicle platforms (Bradley, Abrams, Crusader, FSCS, etc.) Each phase also was to return to the aviation community the technology improvements appropriate for these platforms. D718

For the FED program, technology development and maturation is executed under an existing DARPA contract. The Army is managing engineering design and hardware fabrication via an option to the DARPA contract. PM-GSI is assessing the HTI suitability for combat vehicles via technology demonstrator and engineering prototype unit evaluations performed by GDLS and UDLP. Evaluation results will be used by platform PMs to determine technology insertion applications. A common FED performance specification is being prepared to support HTI acquisitions.

At this time the CGA Acquisition Strategy is comprised of a Management/PMO Strategy and a Contracting Approach. Since this effort seeks to redesign existing vehicle subsystems/LRUs to incorporate commonality attributes, it is expected that existing PMs Abrams, Bradley, and Crusader contracts will be utilized for the majority of work. When this is not possible, fully competitive contract awards will be used to execute CGA efforts. PM GSI will perform the administration management of the CGA Program. This administration includes oversight of all CGA related efforts to ensure defined milestones are being met. The CGA program will be managed through agreements made between all interested GCSS PMs.

A. <u>Mission Description and Budget Item Justification</u>: This program element funds the evolutionary software development, integration and testing of the Maneuver Control System (MCS). Project D484, Maneuver Control System (MCS) satisfies an urgent need for efficient command and control (C2) of tactical operations on the battlefield. MCS is the Army's tactical C2 system used in command posts from corps to battalion to provide automated C2 for the commander and staff at and between echelons (i.e., Force Level Control). MCS is an essential component of the Army Battle Command System (ABCS) and provides critical coordination among Battlefield Functional Areas (BFAs) within each echelon. The primary component of Force Level Control is MCS's provision of the Common Tactical Picture (CTP). The CTP depicts information provided by all the Battlefield Functional Areas (BFAs) and includes a Situation Map (SITMAP) using Defense Mapping Agency map data to display friendly and enemy unit locations, control measures (e.g., boundaries, phase lines, etc.), Intelligence and Electronic Warfare graphics, Fire Support plans, combat service support location information, air corridors and air defense weapons control information.

MCS software is based on the OSD-DISA Common Operating Environment (COE) standard architecture with applications to automate C2 operations. The MCS Block IV software uses the Joint Mapping Tool Kit (JMTK), a Defense Information Infrastructure Common Operating Environment (DII COE) product, for terrain analysis, planning and SITMAP graphical displays. The Task Organization (TO) Tool provides the commander and staff a means of organizing (graphically and textually) tactical Army units by echelon. Unit commanders and their staffs can quickly and efficiently prepare and disseminate combat orders with MCS's automated Operations Order (OPORD) generating tool. MCS's report displays provide resource information roll-ups on all reporting battlefield units. MCS provides the Common Tactical Picture software supporting battlefield situation display for all ATCCS BFAs. MCS provides the Army "ground track" segment of the joint tactical common picture to the Global Command and Control System-Army (GCCS-A).

## FY 1999 Accomplishments:

- 28570 Continued MCS Block IV software development
- Began planning for Block IV Initial Operational Test and Evaluation (IOT&E)

Total 28720

### FY 2000 Planned Program:

- 40653 Continue MCS Block IV software development
- 2930 Participate in test events leading to Block IV IOT&E
- 1000 Integrate Tactical Voice Control
- 1193 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) programs

Total 45776

### Change Summary Explanation:

Funding: FY2000 (+1000) Congressional increase for integration of a tactical voice control capability in MCS

FY2001 (+23228) Increase for MCS Block IV software development and conduct of the Block IV IOT&E.

Schedule: OSD Acquisition Decision Memorandum, dated Aug 6, 1999, approved change in the MCS program acquisition strategy. MCS Block III will only be fielded to the Training Base. MCS Block IV will complete its IOT&E in (1Q 02) with a Milestone III decision in BES/Q02.

**D.** <u>Acquisition Strategy:</u> Since the initial MCS was introduced in Europe in 1981, this program has been and will continue to be an evolutionary software development program broken out into Blocks. The MCS capability continues to expand in pre-planned, time-phased steps toward the objective system. The MCS acquisition strategy is based on modular development of application software, integrated with the common system software, hosted on the procured commercial off-the-shelf CHS computers and peripheral hardware. The current block of MCS software, Block IV, consists of development of two versions; MCS Version 1(FDD) and MCS Version 2(FDC). MCS

Version 2(FDC), the Block IV objective software will add applications and stand-alone functionality from MCS Version 1(FDD). Therefore technical risk associated with

each version is minimized. The use of Common Hardware/Software (CHS) equipment enables the MCS to capitalize on state of the art ruggedized, commercial equipment and reduce life cycle costs. Commencement of the transition to CHS began in FY 1989 with the initiation of the porting of software as well as the initiation of the integration of CHS into both the Standardized Integrated Command Post System (SICPS). MCS is moving to ruggedized commercial workstations and notebook computers to enhance software development, support and training.

A. Mission Description and Budget Item Justification: The Aerial Common Sensor/GUARDRAIL VII (ACS/GRVII) is an airborne intelligence collection system required to provide critical support to US-based early entry, forward deployed forces, and support the Army's seamless intelligence architecture. ACS will satisfy the Army's critical need for a worldwide, self-deployable, airborne reconnaissance, intelligence, surveillance, and target acquisition (RISTA) capability that can immediately begin operations when arriving in theater. The ACS/GRVII will merge the current Airborne Reconnaissance Low (ARL) and Guardrail Common Sensor (GRCS) into a single airborne system capable of providing a rapid response information dominance capability to Land Component Commanders required in the early 21st Century. ACS will be composed of a family of modular sensors mounted on an airborne platform that is capable of operating independently or remotely via SATCOM or line-of-sight datalinks from a ground processor. The sensors will be interoperable with the open C4ISR architecture and support all combat and combat support functions through the emerging DOD "global infosphere". The primary mission will be standoff Signals Intelligence (SIGINT) collection, with a secondary mission of overflight Imagery Intelligence (IMINT). ACS is primarily targeted against threat maneuver forces, logistic areas, rocket and artillery forces, air defense artillery, command control communications and intelligence nodes (C3I); and tactical fixed –wing, rotary wing and unmanned aerial vehicles. ACS/GRVII will satisfy unique Army/Land Force Commander Intelligence, Surveillance and Reconnaissance (ISR) and targeting requirements, and those of the Land Force Component of Joint and Combined Task Forces (JTF and CTF) across the spectrum of Operations.

This project is unclassified and is a cooperative effort with the Joint Airborne SIGINT Program Office (JASPO) which is developing the Low Band subsystems (LBSS) and High Band Subsystems (HBSS) to be integrated into the Aerial Common Sensor. The incorporation of the JASPO subsystems will provide compatibility to allow interoperability with the other services SIGINT platforms. The National Security Agency's Defense Cryptologic Program provides funding to support enhanced SIGINT capabilities.

The FY01 funding supports efforts to identify an airborne platform which best supports the multi-mission role of ACS and begin non-SIGINT Prime Mission Equipment (PME) development and integration efforts. FY01 Funding also supports efforts to extend the useful life/currency of the GRCS fielded systems modifying current system software to incorporate additional signals of interest. In addition to the software modifications, an upgrade implementation plan will be developed along with an Interface Control Document (ICD) that describes the connection and interface requirements for integrating GOTS/COTS hardware into the system architecture and host platform. The plan and ICD will provide a pathway to upgrade the fielded systems to intercept, recognize and locate advanced commercial, digital signals.

FY 1999 Accomplishments: Project not funded in FY 1999

PE NUMBER AND TITLE

PROJECT

0203744A Aircraft Modifications/Product Improvement Program

D028

#### FY 2000 Planned Program:

- 5045 Prepare, evaluate and award contract(s) for ACS concept exploration (e.g. System design, modeling and simulation.)
- 420 Program office support
- 139 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 5604

#### FY 2001 Planned Program:

- Complete initial phase of ACS concept exploration contract(s). Evaluate results and award follow on contract(s) for further development, modeling and simulation of leading design.
- 178 Design evaluation and source selection
- Award contract(s) for GRCS fielded systems enhancements; modify system software to incorporate additional signals of interest. Develop implementation plan with an Interface Control Document (ICD) for system upgrades.
- 887 Program office support

Total 11284

B. Other Program Funding Summary	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To	Total
								Complete	Cost
Defense Cryptologic Program (DCP)		14725	14130	17694	19635	20678	18476		105338

0305206/DK98 Tactical Reconnaissance				6837	4879	4837	5200	Continue	Continue

C. Acquisition Strategy: The Aerial Common Sensor development and integration contract(s) will be awarded on a competitive basis. Requirements will be to analyze/recommend architecture to include an airframe that integrates SIGINT and non-SIGINT suites, e.g. Moving Target Indicator (MTI)/Synthetic Aperture Radar (SAR), Electro Optic/Infrared (EO/IR), etc. The contractor will be required to provide the integration analysis, modeling and simulation packages and a proposed airframe for a total system recommendation. Following the evaluation of the recommendations, new limited competitive, cost plus contract(s) will be awarded in FY2002 to begin risk reduction efforts. The contractor will be required to support the program through a milestone III approval of the aircraft and sensor suites.

The SIGINT payload for ACS will be comprised of scaled HBSS and LBSS subsystems being developed by the JASPO under separate action with additional enhancements being funded under the ACS DCP program.

The acquisition strategy for the GRCS upgrades will be through task orders against competitive omnibus contracts that team multiple contractors.

**A.** <u>Mission Description and Budget Item Justification</u>: The Improved Cargo Helicopter (ICH) is a program to extend useful life of the CH-47D Cargo helicopter. This funding will assure heavy lift capability into the 21<sup>st</sup> century. This program awarded a contract for Engineering Manufacturing Development (EMD) which includes decreasing operation and support costs through vibration reduction/airframe stiffening, incorporating a new electronics/architecture system for compatibility with the digital battlefield and structural modifications as necessary to extend the life of the airframe.</u> This program will be the basis for establishing remanufacture, modernization, and upgrade program to meet the readiness needs of the future for heavy lift capability. The ICH Program will include testing of the two engineering development models plus component testing for Live Fire.

#### FY 1999 Accomplishments:

- 20953 Awarded Engineering Manufacture Development (EMD)
- 1330 Continued In-house and program management administration
- 1294 Continued Government Test and Evaluation

Total 23577

#### FY 2000 Planned Program:

C. Acquisition Strategy: The ICH will sustain the aging fleet and bridge the gap until the development of a follow-on aircraft. This will be achieved in a cost effective manner as the ICH program will be based on a three-pronged remanufacture approach which will include rebuilding the airframe, improving mission capability, and reducing vibrations to provide for longer term O&S cost reductions. There will be two LRIP lots to ramp up full rate production.

D504 UH-60A/L Black Hawk SLEP/Modernization	0	980	9 29915	38506	38281	24764	24740	Continuing	Continuing

A. <u>Mission Description and Budget Item Justification</u>: The mission of the UH-60 Black Hawk includes air assault, general support, aeromedical evacuation (MEDEVAC) and command and control. There are currently over 900 UH-60A and over 500 UH-60L model aircraft in the Army today. There will be over 1500 UH-60 Black Hawk aircraft at the end of the current planned buy in fiscal year 2005. A Utility Helicopter Fleet Modernization Analysis was conducted in 1999 to determine the most operationally effective and affordable strategy to modernize the utility helicopter fleet. The General Officer Steering Committee (GOSC) that led the analysis recommended a tiered, evolutionary modernization approach (UH-60L+ and UH-60X aircraft) to meet utility helicopter mission requirements. The UH-60L+ is the near-term evolutionary approach, buying back lift and providing digitization while reducing Operation and Support (O&S) costs and increasing readiness rates of the aging UH-60A/L fleet. The modernization effort will transition from UH-60L+ to UH-60X in FY04. The procurement of the UH-60L+ will start in FY03. Through modification of existing UH-60A/Ls, the UH-60L+ will include airframe structural improvements, a propulsion upgrade (T700-GE-700 to T700-GE-701C for the UH-60A), and a digital cockpit. In addition, the UH-60L+ will provide a common, modernized platform for UH-60Q aeromedical evacuation (MEDEVAC) helicopters by incorporating the medical mission equipment package on these aircraft.

FY 1999 Accomplished Program: Program not funded in FY 1999

#### **FY 2000 Planned Program:**

- 5226 Initiate Airframe, Avionics and Engine Prototype Design and Development
- 372 Prepare Depot Compatibility Study
- 2121 Test Planning
- 1826 Initiate Prototype Aircraft Preparation/Teardown
- 264 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 9809

#### FY 2001 Planned Program:

- 8631 Conduct Airframe Prototype Design and Development
- 13050 Conduct Avionics Prototype Design and Development
- 3645 Conduct Engine Prototype Design and Development
- 4589 Test Planning

Total 29915

C. Acquisition Strategy: The UH-60L+ modernization is the first step in an evolutionary, tiered approach that will ultimately result in a fully ORD compliant UH-60X aircraft for first-to-fight units. An evolutionary, tiered modernization approach will meet the new requirements of increased lift, range, and survivability; plus, address the challenges of the aging fleet, such as decreasing operational readiness and increasing operating costs. The UH-60L+ will modify the existing Black Hawk to meet digitization/situational awareness requirements. It will also provide a common, modernized platform for the UH-60A/L and the UH-60Q/HH-60L MEDEVAC aircraft. Planned modifications will extend the life of the aircraft, reduce O&S costs and increase operational readiness. A streamlined acquisition strategy has been structured for the UH-60L+ program. The UH-60L+ technical solution will be defined through the development of engineering changes to incorporate airframe structural improvements, a propulsion upgrade and a digitized cockpit. These improvements will take advantage of ongoing technology development programs, the existing UH-60L engine program and the UH-60Q/HH-60L MEDEVAC program. The modified UH-60L+ lays the foundation for the UH-60X development program. Consistent with the evolutionary process, as the integration and qualification of the UH-60L+ is completed; the follow-on development of the UH-60X is initiated.

D508 Apache 2nd Generation Forward Looking Infrared (FLIR)	3714	.4 17434	38388	41168	0	0	0	Continuing	

#### A. Mission Description and Budget Item Justification

Apache Second Generation Forward Looking Infrared (FLIR) is a U.S. Army program to develop, test, integrate and produce a Second Generation FLIR (SGF) for the Army's entire fleet of AH-64A and AH-64D aircraft. The FLIR system allows for pilotage of the aircraft and the engagement of targets during night operations and adverse weather conditions. The Apache SGF program will leverage technology already invested in electronics, sensors and optics to provide the best sensor available at the lowest cost. The SGF enhancements over the present Apache FLIR include increased range for detection, recognition and identification of targets; higher resolution for a sharper, clearer image; improved sensitivity, especially in adverse weather; increased capability to identify friend versus foe during hostilities; and increased reliability. These enhancements will improve the overall warfighting capability of the Apache aircraft by: 1) providing improved clarity and ability to fly and navigate using FLIR imagery; 2) significantly enhancing the pilot's visibility and safety while improving target designation and acquisition; and 3) improving aircraft survivability with increased standoff ranges; 4) reducing the risk of fratricide and 5) reducing the operation and support costs of the system.

FY 1999 Accomplishments: Project not funded in FY 1999

#### **FY 2000 Planned Program:**

- 32287 Award Engineering & Manufacturing Development (EMD) Contract/PDR for 2<sup>nd</sup> Generation FLIR.
- In-house & Program Management Administration/Complete Source Selection Evaluation (SSEB) for EMD Program.
- 2000 Test and Evaluation Qualification Testing
- 1000 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 37144

### FY 2001 Planned Program:

- 15362 Continue EMD Contract for 2<sup>nd</sup> Generation FLIR Development/CDR/First Prototype Delivery
- 1200 Continue in-house and Program Management Administration
- 872 Test and Evaluation Qualification Testing

D374 Horizontal Battlefield Digitization 40056 29941 29671 29202 28584 321							33130	Continuing	Continuing

A. Mission Description and Budget Item Justification: Battlefield Digitization is a strategy that allows warfighters, from the individual soldier and platform to echelons above corps, to share critical situational awareness (SA) and command and control information. It applies digital information technologies to acquire, exchange, and employ data throughout the battlespace, providing a clear and accurate common relevant picture of the battlespace for leaders at all levels. This timely sharing of information significantly improves the ability of commanders and leaders to quickly make decisions, synchronize forces and fires, and increase the operational tempo. Digitization is a means of realizing a fully integrated command and control capability to the platoon level, including interoperability links with joint and multinational forces. The major FY01 efforts included in the program element are: 1) The horizontal battlefield operating integration office (Army Digitization Office), responsible for the integration and synchronization of the Army's digitization efforts; coordination of digitization efforts between joint and multi-national forces; and synchronization of combat material and training efforts to develop and deploy Army XXI information technologies. 2) System engineering and integration of physical interfaces and logical mechanisms between and across multiple battlefield operating systems to provide improved capability to operate in the common battlefield picture/SA and common operating environment (COE) dimensions. This will provide enhanced synchronization of maneuver, direct/indirect fires, intelligence and targeting, and reduced fratricide. The goal of Horizontal Battlefield Digitization is to integrate modern information technology into the Army of the 21st Century.

#### FY 1999 Accomplishments:

- 4849 Data engineering evaluation and analysis testing, experimentation and interrelated simulation of hardware/software
- 4029 System/Platform Integration of heavy/light forces; synchronization assessments, battlefield digitization impact studies and system of systems issue resolutions.
- 2300 Joint and Coalition interoperability programs for improving digitization including C4I Coalition Warfare, Command and Control System
  Interoperability Program (C2SIP) efforts. Specific tasks included: database development, operation system architecture development, and Multilateral
  Interoperability (MIP) Phase I testing and Phase I demonstrations.
- 1417 Analysis (including modeling/simulation) to predict overall digitized system of systems performance.
- 17320 Continued software/hardware integration, prototype development and commencement of testing of FBCB2/Embedded Battle Command (EBC) on Abrams tanks and Bradley fighting vehicles.
- 1118 Thorough validation of digital requirements/architecture to ensure realistic/adequate data flows, mission thread analysis, interoperability, human resource engineering, security and physical layout.
- Integration tools, plans, specifications and other training, logistics interface and configuration management products for the 66 TRADOC identified systems.
- 4135 Evaluated emerging interfaces to ensure interoperability across all functional areas including: 1) Studied porting of EBC for aviation, SSAT for Beta version and ADA bindings solutions for the Aviation communications requirements for full tactical internet (TI) connectivity/mobility and support of

**D.** <u>Acquisition Strategy</u>: To validate/demonstrate concepts and requirements, near term efforts were focused on developing a seamless battlefield software architecture and digitized appliqué hardware systems supporting experimentation to include: evaluation of the horizontal battlefield digitization resources of systems, acquisition, integration, and testing of digital capability across multiple command and control, communications, sensor and weapons platforms. The result will be an integrated digital capability designed to meet the near-term requirements of the First Digitized Division by end of FY00 and First Digitized Corps by the end of FY04. Also, it supports the Army's role in joint and multi-national digitization programs; coordinates/manages security, vulnerability and "Red Teaming" functions; and manages Manpower and Personnel Integration (MANPRINT), modeling and simulations, and analysis.

<sup>\*</sup> Database presently shows 56328. Internal reprogrammings totaling 4325 have reduced this total to the current program of 52003. Database will be updated with the next submission.

A. Mission Description and Justification: The initial FBCB2 effort was developed under Program Element 0203758A, Project D374 as part of the Army's digitization initiative and was transferred to this Program Element for central management by the Program Executive Officer for Command, Control and Communications (PEO C3S)/PM FBCB2 beginning in FY 1999. The mission of PM FBCB2 is to develop, acquire, test and field a digital information system that provides mounted tactical combat, combat support, and combat service support commanders, leaders and soldiers, integrated, on-the-move, real-time/near real-time, situational awareness and command and control information. This capability will be fielded from brigade down to the soldier/platform level across all Battlefield Functional Areas (BFAs), and include other division and corp elements necessary to support brigade operations. FBCB2 will be integrated into the mounted and dismounted maneuver (divisional, separate, heavy and light) calvary/reconnaissance and armored cavalry, mechanized infantry and aviation units. PM FBCB2 is developing, and delivering the Applique (computer, software, and installations kits) and FBCB2 (software) products which are integrated into various platforms. Battlefield digitization allows the Army's primary weapons and battle command systems to see, acquire and engage threats while sharing the same information with equal clarity, using advanced technologies and digital communications. These platforms are connected through a communications infrastructure called the Tactical Internet. Interoperability is provided through the use of graphics, images common messages and data elements. The FBCB2 system and tactical internet provide the power of the network to share situational awareness (SA) and command and control (C2) information toward the efficient use of resources within the enemy's decision cycle. FBCB2 is integrated with Army Tactical Command and Control Systems (ATCCS) located within the brigade and battalion. The interfaces between FBCB2

#### FY 1999 Accomplishments:

PROJECT D120

B. Program Change Summary	<u>FY 1999</u>	FY 2000	FY 2001
Previous President's Budget ( <u>FY 2000/2001</u> PB)	52121	44225	28876
Appropriated Value	52469	65925	
Adjustments to Appropriated Value			
a. Congressional General Reductions	-348		
b. SBIR / STTR			
c. Omnibus or Other Above Threshold Reduction	+175	-270	
d. Below Threshold Reprogramming	-83		
e. Rescissions	-210	-479	
Adjustments to Budget Years Since FY 2000/2001 PB			+34725
Current Budget Submit (FY 2001 PB)	52003	65176	63601

Change Summary Explanation: Funding - FY 2001 increase of 34725

- 11100 for ATEC testing (LUT3/DCX1, DCX2, IOTE)
- 2000 for Electronic Proving Ground (EPG)
- 1200 CTSF Integration
- 1600 Time and Materials efforts to support numerous events
- 15800 Software development to accomplish functional capability requirements
- 1500 Aviation FBCB2 Development Digitization of Army Aviation
- 1500 Windows NT Development

**D.** <u>Acquisition Strategy:</u> Spiral development is the overall FBCB2 acquisition strategy. It is based on proving out functional capabilities through numerous incremental testing events over time and incorporating results/feedback into the next "spiral". The current competitive contract, awarded in 1995, is a System Engineering and Integration (SE&I) effort, with cost plus incentive fee, time and materials and firm fixed price orders. The contract is for the development of software version's V1-V3 and appropriate hardware. The follow-on SE&I contract will be awarded in FY01 for software versions V4. A competition for Low Rate Initial Production (LRIP) hardware contractors began in FY99 under the management of the present SE&I contractor. A three year LRIP Firm Fixed Incentive Target Fee

	and Below(FBCB2)		

(FFITF) contract is to be awarded in January 2000 and will be OPA funded. The LRIP permits establishment of a robust production base and an orderly increase in the production rate for the

system sufficient to lead to full-rate production upon the successful completion of operation testing. The full rate production contract will be awarded in FY02. FBCB2 is integrated with the Army Tactical Command and Control (ATCCS) located within the brigade and battalion. The interfaces between FBCB2 and ATCCS systems will provide users at all levels a common picture of their battlespace.

Program realigned in March 1999 to support DOTE guidance for "additional functionality" and "maturity" of software. Incorporates additional testing and force effectiveness evaluations.

#### DATE **ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)** February 2000 BUDGET ACTIVITY PE NUMBER AND TITLE **PROJECT** 7 - Operational System Development 0203761A Force XXI Initiatives - Warfighting Rapid D394 **Acquisition Program (WRAP)** FY1999 FY 2000 FY 2001 FY 2002 FY 2003 FY2004 FY2005 **Total Cost** Cost to COST (In Thousands) Actual Estimate Estimate Estimate Estimate Estimate **Estimate** Complete D394 Force XXI Initiatives - Warfighting Rapid Acquisition Program 36621 6021 93813 93510 95345 97197 Continuing Continuing (WRAP)

A. <u>Mission Description and Justification</u>: Force XXI Initiatives (Warfighting Rapid Acquisition Program) continues as one of the Army's Acquisition Reform initiatives. The overall intent of the Force XXI Initiatives is to put proven technologies in the hands of the soldiers sooner while gaining significant time. Candidates considered for funding through this program are compelling, mature technologies capable of achieving a milestone III decision in the near future or following one to two years of continued development. Initiatives can originate from virtually anywhere. "Good ideas" continue to emerge from such sources as the Training and Doctrine Command (TRADOC) Centers, Schools and Battle Labs, the user community, the Army Materiel Command (AMC), Research Development & Engineering Centers (RDECs), the Project Manager/Program Executive Officer (PM/PEO) community, industry, Academia, Horizontal Technology Integration (HTI), General Officer Steering Committees (GOSCs), and the Federally Funded Research and Development Centers (FFRDCs). The primary sources for WRAP Initiatives are the Battle Lab Warfighting Experiments (BLWEs), Advanced Concepts and Technology (ACT II) and the Advanced Concept Technology Demonstrations (ACTDs). The Force XXI Initiative (WRAP) program is the bridge linking Army's compelling successes in experimentation to systems acquisition.

This program element was established to serve as a holding account for all funding appropriated by Congress to support the Force XXI Initiatives program, consistent with Congressional language reflected in the Department of Defense Appropriations Bill. As experienced with prior year WRAP funding, which required a number of internal realignments of funds for WRAP initiatives associated with on-going programs, future WRAP funding will require reprogramming of funds from this line to other program elements or other appropriations, as deemed appropriate under current congressional or legal constraints.

**FY 1999 Accomplishments:** Program funded FY 99 Force XXI Initiative candidates – see reprogramming below in Paragraph B.

#### **FY 2000 Planned Program:**

• 36621 To be reprogrammed to support continuing FY 99 WRAP systems and FY 00 Force XXI Initiative candidates

Total 36621

#### **FY 2001 Planned Program:**

• 6021 FY 2001 Force XXI Initiatives candidates

Total 6021

A. <u>Mission Description and Budget Item Justification</u>: The goal of the Air Defense Artillery (ADA) modernization is to provide the most capable systems to well-trained soldiers at the right time to defeat the evolving threat. The ADA systems under this Program Element achieve the Air and Missile Defense (AMD) force which will assist the Army and the joint force in gaining Full Spectrum Dominance in any operational requirement, from smaller-scale contingency operations to major theater wars (MTW). ADA must continually be upgraded and modernized to meet these challenges. The FY00-FY01 budget funds critical improvements to the Patriot and the Stinger.

B. Program Change Summary	FY 1999	FY 2000	FY 2001

A. Mission Description and Justification: D036 - Patriot Product Improvement Program The Patriot system is being upgraded through a series of individual materiel changes (MC) culminating in the attainment of the Patriot Advanced Capability - 3 (PAC-3) system. The communication upgrades improve Patriot's above and below battalion communication equipment. These changes eliminate Patriot peculiar communications equipment and improve Patriot's interoperability between systems and between the Services. FY00 will be the first year for the Remote Launch Communication Enhancement Upgrade (RLCEU) Link 16 Phase 1 and Post Deployment Build 5 (PDB5). RLCEU Link 16 will develop and test the hardware required for a Link-16 terminal, terminal control and communications processing equipment required to receive and process the Link 16 Joint Data Net information. PDB 5 will improve system capability against advanced threats (Theater Ballistic Missiles and Air-Breathing Threats (TBMs and ABTs) in all environments to include clutter and/or intense Electronic Counter Measures (ECM). Program objective will be to define the software changes necessary to enhance system capabilities against advanced TBM threat and advanced cruise missile threats. In addition, interoperability improvements [e.g., Cooperative Engagement Capability (CEC) interface, cueing, and Tactical Data Information Link (TADIL-J) direct to Fire Unit (FU)], PAC-3 missile integration improvements in ground software Classification Discrimination & Identification (CDI3) enhancements, and on-line diagnostic evolution will be addressed.

#### **FY 1999 Accomplishments:**

- 5435 P3I test program
- 600 Responsive threat analysis
- 2768 Horizontal Battlefield Digitization

Total 8803

Missile Procurement, Army								Complete	Cost
Budget Activity 3 - Patriot Mod (C50700)	14188	49630	22929	25943	22600	41195	41150	Cont	750071
Budget Activity 3 – Patriot Mod Initial Spares	4870	3624	2649	726	1452	3926	3922	Cont	98853

C. Acquisition Strategy: The design objective of the Patriot system was to provide a baseline system capable of being modified to cope with the evolving threat. This alternative minimizes technological risks and provides a means of enhancing system capability through planned upgrades of deployed systems. The Patriot program consists of two interrelated acquisition programs - the Patriot growth program and the PAC-3 missile program. Growth program modifications are grouped into configurations, which are scheduled to be fielded in the same time frame. Configuration groupings are convenient for managing block changes of hardware and software and are not a performance-related grouping. However, incremental increases in performance will be determined for each configuration in order to provide benchmarks for configuration testing and for the development of user doctrine and tactics.

D303 Stinger RMP Product Improvement Program	5649	245	5666	5562	5258	4756	7427	Continuing	Continuing

A. <u>Mission Description and Justification:</u> This project provides a product evolution of the Stinger-RMP to improve countermeasures capability via externally loaded software, which is downloaded from a reprogrammable module. This concept allows for timely upgrades to correct system deficiencies, rapid reaction to new threats or threat countermeasures, development of specialty software programs where full capability may not be desired, and accommodation of new missions. The Block I upgrade project, which adds a roll sensor and enhanced software, extends the missile service life, solves system performance deficiencies in countermeasures and other engagement conditions, and increases terminal accuracy. The Block II development program was terminated due to higher priority requirements of the New Army Transformation. However, critical evaluation of Block I improvements and performance will continue.

#### **FY 1999 Accomplishments:**

- 1400 Built and Evaluated Block II Guidance Sections
- 1773 Hardware-in-the-Loop Flight Simulation Development, Missile Airframe and Missile Simulation Analyses
- 300 Continued Telemetry Development
- 500 Rate Sensor Evaluation
- 1676 Conducted performance prediction, weapon system integration, and preparation for entry into EMD

Total 5649

#### FY 2000 Planned Program:

- 3000 STINGER Block II Program Termination & Technology Transition
- 550 AIM9X & RAM Technology Evaluation (Producibility & Obsolescence Reduction)
- 150 Lithium Battery Evaluation (Shelf Life Extension)
- 17653 Support the New Army Transformation
- 2500 Congressional increase erroneously appropriated to this program element. Action pending to correctly reclassify funds for the SWORD program.
- Small Business Innovation Research/Small Business Technology Transfer Program

Total 24509

### FY 2001 Planned Program:

• 910 Dual Detector Aging/Degradation Test, Evaluation and Analysis

C. Acquisition Strategy: The Block I development program is a Sole Source/Cost Plus Incentive Fee contract awarded in 1992. The Block II development began FY 1993 as a Technology Base Broad Agency announcement with a SS/CPFF contract. A SS/CPFF contract was awarded 1996 for pre-Engineering, Manufacturing and Development (EMD). A SS/CPFF contract was awarded mid-FY 1997 for the MIL-STD Launcher electronics development. The VSHORADS/SHORADS Competitive/Firm Fixed Price contract was awarded to two international consortia; the United Kingdom was designated as the Pilot Nation, serving as contracting authority. Due to termination of the Block II development program and redefinition of activities to fund critical evaluation of Block I improvements and performance, a contract for follow-on Stinger Block I improvements will be awarded in 2Q FY2000.

A. Mission Description and Justification: The TOW Fire and Forget (F&F) Missile program provides the next generation missile for light, early entry contingency forces equipped with the TOW Improved Target Acquisition System (ITAS). This program provides enhanced survivability to Light Infantry Forces by enabling engagement of enemy threats and immediate movement to safety. This fire and forget technology is required by U.S. Army Infantry School (USAIS) to maintain the infantry's capability to support the U.S. Army mission of crisis response to regionally based threat and allows this technology to be integral to the strategic principal of forward presence. The TOW F&F includes a dual mode of attack with the primary mode being fire and forget and the alternate mode being Command Line-of-Sight (CLOS) guidance to ensure maximum engagement throughout varying battlefield conditions. The TOW F&F offers enhanced range as well as maximum standoff against enemy threats. This program includes improved lethality against new/evolving enemy threats to include Counter Active Protection System (CAPS) and will be launched from the Improved Target Acquisition System (ITAS). This program will utilize modern production processes and technologies with Design for Manufacturing and Affordability (DFMA). The TOW F&F is required to be modular in design for future growth and shelf life extension. The Longbow Hellfire missile provides a fire-andforget capability, greatly increasing the Longbow weapon system effectiveness and aircraft survivability. The Longbow system is deployable by day or night, in adverse weather, and in countermeasure environments. The Longbow Hellfire Product Improvement Program (PIP) will develop and qualify Home-on-Jam (HOJ)/Anti-Jam (AJ) and demonstrate limited CAPS capabilities for the missile. The HOJ/AJ and CAPS objective is to maintain the Longbow systems low vulnerability and susceptibility to existing and future "hard kill" Active Protection System (APS) threats and battlefield jammer threats. The Advanced Precision Kill Weapon System (APKWS), presently funded in project D786 Laser Guided Rocket, will consist of a laser guidance section that uses existing Hydra-70 rocket components and launch equipment. The APKWS is a highly accurate weapon that will complement the Hellfire missile in precision strike against soft point targets. The APKWS will provide improved accuracy over the current 2.75 rocket used on the AH-64 Apache, OH-58 Kiowa Warrior and the future RAH-66 Comanche helicopters. The APKWS seeker program will develop, test and qualify a laser guidance section for the Hydra-70 rocket. The laser seeker program funding includes system level qualification for APKWS. The APKWS seeker will improve accuracy and is expected to provide four times the number of kills, a substantial reduction in collateral damage to minimize fracticide, and a significant reduction in cost as a result of fewer rockets being required.

A. <u>Mission Description and Justification</u>: Project D336 -TOW Product Improvement Program Provides the next generation missile for light, early entry contingency forces equipped with the TOW Improved Target Acquisition System (ITAS). Provides enhanced survivability to Light Infantry Forces by enabling engagement of enemy threats and immediate movement to safety. Required to maintain the infantry's capability to support the U.S. Army mission of crisis response to regionally based threat and allows this technology to be integral to the strategic principal of forward presence. The TOW F&F includes a dual mode of attack with the primary mode being fire and forget and the alternate mode being Command Line-of-Sight (CLOS) guidance to ensure maximum engagement throughout varying battlefield conditions. The TOW F&F offers enhanced range as well as maximum standoff against enemy threats. This program will utilize modern production processes and technologies with Design for Manufacturing and Affordability (DFMA). This program includes improved lethality against new/evolving enemy threats to include Counter Active Protection System (CAPS) and will be launched from the Improved Target Acquisition System (ITAS). The TOW F&F is required to be modular in design for future growth and shelf life extension.

#### **FY 1999 Accomplishments:**

- 200 Continued efforts on ITAS Indoor Trainer
- 1001 Continued missile enhancement efforts against the evolving threat [to include Counter Active Protection System (CAPS)]
  - -Updated analytical/simulation model based on latest intelligence reports
  - Tested long stand-off warhead
  - Tested electrical active/passive measures

Total 1201

#### **FY 2000 Planned Program:**

- 1696 Release EMD Request for Proposal; Conduct Source Selection; Complete Milestone II; and Award EMD Contract.
- 11417 Initiate Component Design, Simulation, and System Engineering Analysis for Preliminary Design Review (PDR).
- 3500 Complete PDR.
- 598 Prepare for Early User Assessment.
- 476 Small Business Innovative Research/Small Business Technology Transfer Programs

**B.** <u>Acquisition Strategy:</u> The TOW F&F missile program is a technology insertion program utilizing the latest seeker and guidance technology to provide a high performance and reliable fire and forget missile. The TOW F&F program will be an Acquisition Category II program based upon DOD 5000.2-R guidelines. The Request for Proposal (RFP) was released 1<sup>st</sup> quarter FY00 and EMD contract award is scheduled for 3<sup>rd</sup> quarter FY00. The TOW F&F program includes a 42 month competitive EMD phase, followed by Low Rate Initial Production (LRIP) and Full Rate Production (FRP).

A. <u>Mission Description and Justification</u>: Expanding regional power threats require an evolutionary improvement program to maintain the effectiveness of the Hellfire, Army Tactical Missile System (ATACMS), TOW and Hydra-70 systems. The Longbow Hellfire missile provides a fire-and-forget capability, greatly increasing the Longbow weapon system's effectiveness and aircraft survivability. The Longbow system is deployable by day or night, in adverse weather, and in countermeasures environments. The Longbow Hellfire Product Improvement Program (PIP) will develop Home-on-Jam (HOJ)/Anti-Jam (AJ) and limited Counter-Active Protection System (CAPS) capabilities for the missile. The HOJ/AJ and CAPS objective is to maintain the Longbow Hellfire Missile System's low vulnerability and susceptibility to existing and future "hard kill" Active Protection System (APS) threats and battlefield jammer threats.

**FY 1999** Accomplishments: Project not funded in FY 1999.

FY 2000 Planned Program: Project not funded in FY 2000.

#### FY 2001 Planned Program:

- 10294 Product Development
- 744 Support Costs
- 621 Test and Evaluation Support (includes 5 prototype test articles)
- 618 Management Services Support

Total 12277

A. Mission Description and Budget Item Justification: A requirement exists to automate Signal Corps units' capability to manage multiple tactical communications systems in support of battlefield operations. The Integrated System Control (ISYSCON) facility will provide centralized management of the tactical communications network, establish an interface with each technical control facility in the Army Tactical Command and Control System (ATCCS) architecture, and enable automated configuration and management in a dynamic battlefield data network. ISYSCON is being developed with incremental software releases. The ISYSCON Program serves as a baseline foundation to support future network management initiatives tied to and part of the digitized division and the WIN Architecture. ISYSCON V(4) is also being developed to do network planning and management of the Tactical Internet at Brigade and Below (EPLRS, SINCGARS, FBCB2, etc.), as well as the TOC LAN. The Joint Network Management System (JNMS) is a commander in Chief (CINC), Commander, Joint Forces (CJF) communications planning and management tool. It provides the capability to conduct high level planning (war planning); detailed planning and engineering; monitoring; control and reconfiguration; spectrum planning and management; and security of networks supporting joint operations. The JNMS will be developed in phases, System Architecture, Key Performance Parameter (KPP) Threshold, Threshold and Objective. FY 2000 ISYSCON supports the development of P2 Increment 2 software, operational test, training, and software release of P2 Increment 1. ISYSCON V(4) will be issued to the First Digitized Division, support FQT of Release 2 software, accomplish NET Training and support Operational Assessment of Release 1 & 2 software (participate in FBCB2 test events). FY 2001 ISYSCON completes the development of P2 Increment 2 software, initiates development of P2 Increment 3 software, and supports operational test, training, and software release of P2 increment 2. ISYSCON (V) 4 will continue integration of EPLRS Network Manager functions, pursue Information Assurance Management integration, begin SINCGARS Network Manager integration, and initiate integration on New Tactical Internet components (e.g. Fire Support, Air Defense and Land Warrior). JNMS supports the development of the KPP Threshold requirements for initial fielding in FY03 to meet Defense Planning Guidance and continue remaining Threshold requirements. This program element also supports any network management development required for PM, Warfighter Information Network – Terrestrial (WIN-T).

#### **FY 1999 Accomplishments:**

- 1656 ISYSCON Conduct Post Test Support & Report Preparation for IOT&E Phase II
- 3062 ISYSCON Continue Software Requirements Analysis Phase 2 Inc 1
- 3391 ISYSCON Conduct Software Coding for P2 Inc 1 Baseline
- 1750 ISYSCON Deliver & Support P2 Inc 1 BETA Delivery
- 2750 ISYSCON Conduct Unit Test System Test for P2 Inc 1 Baseline
- 2400 ISYSCON Migration to COE Compliance Level 6
- 2700 ISYSCON Initiate Concept Requirement Review for P2 Inc 2
- 3100 ISYSCON Initiate Software Requirements Analysis for P2 Inc 2
- 2200 ISYSCON Initiate System Design for P2 Inc 2 Baseline

D. Acquisition Strategy: ISYSCON Competitive Engineering & Manufacturing Development (EMD) contract was awarded to GD in September 1992. ISYSCON LRIP decision received May 1995. IOT&E I conducted Mar 98. IOT&E II conducted/completed in Oct 98. LRIP systems supported IOT&E. Received successful MS III FEB 99 for ISYSCON (V)1 and (V)2. ISYSCON P2 Inc 1 software will support fielding of production systems starting with ECB units. ISYSCON Production systems will include acquisition of GFE (CHS/SICPS) hardware for the integration into system assemblages and fielding. TI Manager (V) 4 developed from Army Warfighter Experiments that showed tactical network management and planning to be extremely time consuming. A DD2028 change to the ISYSCON ROC identified the need for Tactical Internet and TOC LAN management. In March 99, PM WIN-T signed a delivery order under the PM FBCB2 contract with TRW, and another with Raytheon under the PM TRCS contract, in response to the DD-2028 requirements. Raytheon is under contract to develop an EPLRS Network Manager (ENM) capability while TRW will develop the remaining TI Mgr functionality (TOC LAN Mgt, Router Configurations, TIC/TIDs, etc) and integrate the ENM software onto a single platform. The TI Mgr is closely coupled to FBCB2 program events, and the Project Manager diverted \$2.7M from ISYSCON V1/V2 to TI Manager (V) 4 to continue its development to support the FBCB2 "System of Systems" test requirements (a congressional item of interest). Block 1 of TI Mgr SW will be formally tested at the contractor's facility prior to the FBCB2 LUT 2 (April 00). Final Block 2 will be issued to FDD in SEP 00. IOT&E and MS III decision will be synchronized with FBCB2 in FY02. Anticipate LRIP decision in OCT 00. JNMS: A competitive contract will be awarded on a best value basis for the development and integration of the JNMS software. The emphasis for the development will be the use of integration of commercial off the shelf (COTS) and government off the shelf (GOTS) control and management software

A. <u>Mission Description and Justification</u>: This program element supports development of critical improvements to the Joint Tactical Ground Station (JTAGS). JTAGS is a transportable information processing system which receives and processes in-theater, direct down-linked data from Defense Support Program satellites and the follow-on Space Based Infrared System Satellites. JTAGS disseminates warning, alerting and cueing information on Tactical Ballistic Missiles (TBMs) and other tactical events of interest throughout the theater using existing communication networks. JTAGS is designated the in-theater element of the United States Space Command's Theater Event System. JTAGS supports all Theater Missile Defense pillars and by being located in-theater, provides the shortest sensor to shooter connectivity. The objectives of the JTAGS improvements are to integrate the Joint Tactical Distribution System (JTIDS) into the communication net, increase system accuracy and timeliness, and upgrade JTAGS to the Multi-Mission Mobile Processor (M3P) for operation with the next generation of the space based infrared satellites. The M3P development for the Space Based Infrared System includes shared funding by US Air Force and US Army and results in a combined development of M3Ps.

#### **FY 1999 Accomplishments:**

- 682 Continued Phase I JTIDS and Sensor Fusion development

**D.** <u>Acquisition Strategy</u>: Critical JTAGS improvements under this PE will be developed making maximum use of NDI/Commercial Off-The Shelf (COTS) elements. After selection and assembly, the modification design will be subjected to thorough integration and performance testing to verify operational effectiveness and suitability. Phase II M3P will be a joint development effort with the US Air Force and will involve cost sharing of the acquisition effort.

A. Mission Description and Budget Item Justification: The Communications Security Equipment Program develops Information Systems Security (ISS) equipment and techniques required to combat threat Signal Intelligence capabilities and to insure the integrity of data network. This program will also develop, integrate, and demonstrate C2 Protect Common Tools into C4I systems that consist of hardware, software, and applications that can manage, protect, detect and react to C2 system vulnerabilities, threats, reconfigurations, and reconstitution. The Army's Research Development Test and Evaluation (RDTE) ISS program objective is to implement National Security Agency (NSA) developed security technology in Army information systems. The Communications Security Equipment Technology (COMSEC) insures total signals and data security of all Army information systems, to include any operational enhancement and specialized Army configurations. The Army Key Management System (AKMS) automates key generation and distribution while supporting joint interoperability. It provides communications and network planning with key management. AKMS is a part of the management/support infrastructure for the Warfighter Information Network (WIN) program. Additional modifications to the AKMS baseline shall be required to support the emerging WIN architecture. System security engineering, integration of available Information Security (INFOSEC) products, development (when required), and testing are services provided to ensure that C4I systems are protected against malicious or accidental attacks by our enemies or friends. Modeling, simulation, and risk management tools will be used to develop C2 Protect capabilities that will enable the warfighter to distribute complete and unaltered information while maintaining a dynamic, continuous synchronous operational force. Several joint service/NSA working groups exist in the area of key management to avoid duplication and to assure interoperability between all Services' systems to include standards and te

A. <u>Mission Description and Budget Item Justification</u>: Project D491 – Command and Control (C2) Protect Development: Project implements National Security Agency (NSA) developed security technology in Army information systems. Project objectives are to provide systems security mechanisms through encryption, trusted software or standard operating procedures to protect the information and to integrate these mechanisms into specified systems so secure operations are as transparent as possible to the users. This entails performing architecture studies and modeling, development models, system integration and testing, installation kits and certifications and accreditation of Automation Information Systems. Project will also assess, develop, integrate and demonstrate C2 Protect Common tools (hardware and software) that will provide protection for fixed infrastructure post, camp and station networks as well as efforts on tactical networks. Results of this effort are also leveraged into and complement the Tactical C2 Protect ATD in PEs 0602782A and 0603006A.

#### FY 1999 Accomplishments:

- 700 Completed the development of TACLANE/FASTLANE Internet Security Manager (TISM).
- 200 Provided support to NSA TACLANE program.
- Completed KY-100 AIRTERM Type Classification and design of installation kits; started Type Classification action on TACLANE; performed Evaluation on latest NSA Information Security (INFOSEC) crypto chips.
- 3347 Supported development and evaluation of Common Protect Tools as follows:
  - Investigated and evaluated Commercial-off-the-Shelf (COTS)/Government-Off –the-Shelf (GOTS) of host systems in the areas of purge tools and user identification and authentication. Developed and exercised scripts to stress protect tools during evaluation process to validate true functionality.
  - Investigated and evaluated COTS/GOTS products for Security Management.
  - Developed, integrated, tested and evaluated Tactical Internet Intrusion Detection System tool.
  - Developed first generation graphical interface for security management.
- 3969 Executed Demonstration Program for Military Health Care Information Protection.
- 1000 Army Electronic Key Management System (EKMS) support.

Total 9624

#### FY 2000 Planned Program:

- Perform in-house evaluations and integration of INFOSEC Non-Developmental Item (NDI) equipment into both trusted and untrusted computer platforms and secure applications.
- 470 In-house support for TACLANE/FASTLANE thru doing development of installation kits and providing engineering support during system fielding.

Project D491 Page 3 of 9 Pages Exhibit R-2A (PE 0303140A)

#### DATE **ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)** February 2000 BUDGET ACTIVITY PE NUMBER AND TITLE **PROJECT** 7 - Operational System Development 0303140A Information Systems Security Program D491 FY 2000 Planned Program: (continued) 250 Perform in-house study/evaluation for Secure Gateway (SEGAT) providing seamless, secure connectivity between major Army tactical communications networks and different security levels. Develop and evaluate C2 Protect Common Tools as follows: - Select and adapt COTS/GOTS Security Management tools, and develop for use in First Digitized Division (FDD) and beyond. - Investigate and evaluate COTS/GOTS C2 protect tools for tactical and/or sustaining base security requirements to include updates to currently selected tools in the areas of vulnerability assessment, host and network based intrusion detection, and firewall. - Stress and evaluate commercial or developmental protect tools being considered for use in Army tactical networks. - Conduct code analysis of C2 protect tools for weaknesses, Trojan Horses and vulnerabilities that can render systems and networks vulnerable to attack. 1949 Support for Army Electronics Key Management System (EKMS) Tier One Support for Defense Health Care Information Assurance Program, continue development of two-phased program for the protection of sensitive data integral to the military healthcare information system. 351 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs 13954 Total FY 2001 Planned Program: Support development efforts on Secure Gateway program. 1000 Support in-house evaluations of NDI and NSA INFOSEC devices and chips, provide engineering/fielding support to TACLANE and Asynchronous Transfer Mode (ATM) encryption program with development of necessary installation kits. Support the development and evaluation of C2 Protect Common Tools as follows: - Ensure remote monitoring and host agent operation. - Extend security management concept for framework that can manage echelons, corps and below. - Tie in protect tools at sustaining base. - Support sync events to verify robustness of network tools.

C. Acquisition Strategy: The object of the C2 Protect Program is to develop, integrate, and validate hardware and software tools that will secure the Tactical Internet (TI) in the FDD. FY 1999 and beyond focuses on completing development and evaluation of C2 Protect tools for the FDD and beyond that will support the procurement of C2 Protect tools that will secure the TI for the lower and upper levels of the Tactical Internet.

A. <u>Mission Description and Budget Item Justification</u>: Project D501 - Army Key Management System (AKMS): This program provides decentralized and automated key generation, distribution and management while enhancing joint interoperability. It eliminates paper encryption key and provides communications network planning with key management.

#### FY 1999 Accomplishments:

• Provided software development upgrades to the AKMS Workstation development environment that allows continued support of emerging and future weapons systems. Funding for development of "modules" for specific weapon systems was provided by the respective weapon system.

3900 Supported Electronic Key Management System (EKMS) Tier One.

Total 5026

#### FY 2000 Planned Program:

• 1258 Continue software development upgrades to the AKMS Workstation development environment that allows continued support of emerging and future weapons systems. Funding for development of "modules" for specific weapon systems is provided by the respective weapon system.

• 35 Small Business Innovation Research (33) /Small Business Technology Transfer Program (2)

Total 1293

#### FY 2001 Planned Program:

• Develop next set of software tools for the AKMS Workstation development environment. Funding for development of "modules" for specific weapon systems is provided by the respective weapon system.

Total 1286

C. <u>Acquisition Strategy:</u> AKMS Initial Operational Test and Evaluation (IOTE) occurred in August – September FY97. Direction was provided to separate the Local COMSEC Management Software (LCMS) from the Automated Communication Engineering System (ACES). Milestone III was conducted in June 1999 and the acquisition strategy and type classification for LCMS were approved. The IOC for LCMS is scheduled for 3Q00 and the IOC for ACES is scheduled for 2Q01.

A. <u>Mission Description and Budget Item Justification</u>: Premier logistics information system being developed to support the logistics management capability for Army 2010 and beyond. Integrates and consolidates 13 legacy system baselines now supporting Army tactical logistics. Consists of six major modules - Supply/Property, Maintenance, Supply Support Activity, Integrated Materiel Management (IMM), Management and Ammunition Supply. Implemented in three Tiers. Tier I is modernization and integration of the current 13 legacy system baselines. Tier 2 integrates wholesale and retail levels of CSS. Tier III implements interfaces with Joint community, national sustaining base and applicable allied systems. This project is not a new start.

**FY 1999 Accomplishments:** Project funded in O&M, Army

FY 2000 Planned Program: Project funded in O&M, Army

#### FY 2001 Planned Program:

- 41255 Continue software development, system engineering and testing of Tier I modules resulting in Milestone III for Maintenance Module (Dec 00) and Integrated Materiel Management (IMM) and Management Modules (Mar 01)
- 30700 Funds will be used in support of the New Army Transformation. This begins development to incorporate new functionalities into Tier I and also initiates development and integration of Tiers II and III.

D. Acquisition Strategy: The process owner is Deputy Chief of Staff for Logistics. GCSS-Army is managed by Project Manager, GCSS-Army. PM GCSS-Army is assigned to the PEO, STAMIS, who reports directly to the Army Acquisition Executive. The contracting office for the GCSS-Army acquisition is the Veterans Administration, Dallas, TX. Integrated Process Teams (IPT) were used to formally manage the acquisition process and continue to be used for requirements definition through the Joint Application Development (JAD). The software developers hold numerous JAD meetings bringing the users to a central location, to discuss user needs and develop system requirements. The Army Corporate Information Officer (CIO) has oversight of the GCSS-Army project. The acquisition Program Baseline documents all cost, schedule and technical performance criteria. Performance goals are defined in performance of Mission Essential Tasks (METs) and non-METs. Controls are in place to monitor the technical performance of matrix support organizations, including periodic reviews at all management levels. Reports are used to monitor program cost and schedules. Development, system qualification, and operational and evaluation testing is conducted. The TEMP established management oversight over the testing program. GCSS-Army has developed a Risk Management Plan that identifies risk descriptions, their initiating events and appropriate mitigation/contingency strategies.

A. <u>Mission Description and Justification</u>: Military Satellite Communications (MILSATCOM) systems are joint program/project efforts to satisfy ground mobile requirements for each Service, Joint Chiefs of Staff (JCS), National Command Authority, Commanders-In-Chief (CINCs), National Security Agency and Office of the Secretary of Defense and other governmental, non-DoD users. The worldwide MILSATCOM systems are the following: Ultra High Frequency (UHF) Fleet Satellite/Air Force Satellite (FLTSAT/AFSAT) system; the Super High Frequency (SHF) Defense Satellite Communications System (DSCS); the Extremely High Frequency (EHF) MILSTAR system; the UHF Follow-On Satellite system; and all MIL-STD-1582C compatible payloads. As the lead service for MILSATCOM Ground Subsystems, the Army is responsible for developing, and procuring satellite terminals; satellite control subsystems; communications subsystems and all related equipment. This also includes maintaining the life cycle logistics support, required to achieve end-to-end connectivity to satisfy JCS Command, Control, Communications, and Intelligence (C3I) supporting the President; JCS; CINCs; Military Departments; Department of State; and other Departments and Agencies of the government.

A. <u>Mission Description and Budget Item Justification</u>: Project D253 - DSCS-DCS Phase II: This project provides funds required to develop strategic and tactical Ground Subsystem equipment to support JCS validated Command, Control, Communications and Intelligence (C3I) for the worldwide Super High Frequency (SHF) Defense Satellite Communications System (DSCS) program. Continuing upgrades for the DSCS are vital to support the emerging power projection and rapid deployment role of the Armed Forces. DSCS provides warfighters multiple channels of tactical connectivity as well as interface with strategic networks and national decision-makers.

### **FY 1999 Accomplishments:**

- 473 Completed the Replacement BATSON (RBATSON) program
- 3610 Continued the DSCS Integrated Management System (DIMS) Interface Software program
- 3700 Initiated the Common Network Planning Software (CNPS) program
- Developed test bed, test link, and engineering and installation standards in support of the Defense Information System Network Europe
- 1855 Continued SATCOM Engineering Lab (SEL), PM Admin, and SETA efforts

Total 15192

# FY 2000 Planned Program:

- 3000 Continue the DIMS Interface Software program
- 4278 Continue CNPS program
- 1398 Continue SEL, PM Admin and SETA efforts
- 240 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 8916

# FY 2001 Planned Program:

- 3617 Continue the DIMS Interface Software program
- 5001 Continue CNPS program
- 1267 Continue SEL, PM Admin and SETA efforts

Total 9885

C. Acquisition Strategy: The Replacement BATSON (RBATSON) program will be followed by a competitive firm fixed price procurement program that contain a basic production year followed by one option year of production. The RBATSON provides security, authenticity, and anti-jam waveform protection to satellite commands generated by the RSCCE for transmission to DSCS III satellites. A total of 21 RBATSON units will be procured and fielded to DSCS Operations Centers and contingency sites worldwide. PM DCATS also developed a test bed, test link, and engineering and installation standards in support of the Defense Information System Network - Europe. The DSCS Integrated Management System (DIMS) and Common Network Planning Software (CNPS) programs are software development programs that are not planned to have follow-on production. DIMS provides the capability to electronically disseminate network plans to the monitoring and controlling DSCS Operations Control System (DOCS) subsystems and to retrieve and display subsystem monitoring data. It also provides a comprehensive view of network operations at DSCSOCs and DISA management sites. CNPS plans strategic and Ground Mobile Forces (GMF) satellite communications networks for DSCS and commercial satellites. DIMS and CNPS will be installed at DSCS Operations Centers and DISA Management Sites at worldwide locations.

D. Schedule Profile	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005

A. Mission Description and Budget Item Justification: Project D384 - SMART-T: The Secure Mobile Anti-Jam Reliable Tactical Terminal (SMART-T) will provide a range extension capability for the Army's Mobile Subscriber Equipment (MSE) to support the Force Projection Army. Specifically, it will provide a satellite interface to permit uninterrupted communications as our advancing forces move beyond the line-of-sight capability of MSE as the Division front expands. This equipment will communicate at both low and medium data rates (LDR/MDR) over the MILSTAR satellite constellation. It will also be compatible with the UHF Follow-On (UFO) and the Navy Fleetsatcom EHF satellite packages and MIL-STD-1582C compatible payloads. It will provide the security, mobility, and anti-jam capability required to defeat the threat and satisfy the critical need as stated above. The SMART-T will also have Low Probability of Interception and Low Probability of Detection (LPI/LPD) to avoid being targeted for destruction, jamming or intercept. The prime mover will be a High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) configured with all the electronics and the self-erectable antenna. In order to maintain proficiency with the terminal given limited satellite access for training, a new EHF payload simulator is being developed for use at Fort Hood. The SMART-T provides mobile anti-jam reliable communications for the warfighter.

### **FY 1999 Accomplishments:**

- 10503 Continued development of Demand Assigned Multiple Access (DAMA), and begin development of Packet DAMA
- 8030 Completed Network Control development efforts and complete Advanced Extremely High Frequency (AEHF) test bed feasibility efforts
- 4822 Continued payload specification change development work

Total 23355

# FY 2000 Planned Program:

- 4781 Complete development of DAMA and continue development of Packet DAMA
- 3650 Begin EHF satellite payload simulator development efforts for a new simulator at Fort Hood
- 2731 Continue payload specification change development work
- 1300 Operate interim EHF "lab configured" payload simulator at Fort Hood
- 1000 Begin initial AEHF component efforts
- 366 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 13828

Other Procurement Army 4 - SSN: BS 9720	1726	0	5196	2553	1967	1363	1167	0	16356

C. Acquisition Strategy: The SMART-T program employed a competitive development strategy. The development phase included two contractors performing under Cost-Plus-Incentive-Fee (CPIF) contracts. The contracts were awarded on 9 November 1992 to Raytheon Company (Marlborough, MA) and Rockwell International (Richardson, TX). Twelve Engineering Development Model (EDM) terminals (6 from each contractor) were developed under the two contracts. The streamlining features of this phase included a reliability growth plan to achieve the required reliability by Follow-On Test and Evaluation (FOT&E). The Low Rate Initial Production (LRIP) and Full Rate Production (FRP) contract was competitively awarded to Raytheon Company on 7 February 1996. SMART-T Milestone III Decision was successfully completed Nov 98. Award of the first FRP Option occurred in Jan 99. The FRP contract will include a block implementation of RDTE-funded terminal Baseline modifications for Demand Assigned Multiple Access (DAMA), Packet DAMA, and Advanced EHF Waveform. Development efforts for these modifications will be conducted in accordance with the schedule provided in this submission. The total Army terminal requirement is 209, of which 43 were procured during LRIP (base year plus one option). The Air Force procured 9 terminals during LRIP. The Full Rate Production (FRP) quantities (166 Army terminals) are awarded as fixed price options to the LRIP/FRP contract. Additional quantities (i.e., 100) will be procured for the Air Force, Marine Corps, JCSE, and other DoD.

A. Mission Description and Budget Item Justification: Project D456 - MILSATCOM System Engineering: The Army is responsible for developing, procuring, and maintaining the life cycle logistics support for satellite terminals; satellite control subsystems; communications subsystems; and all related equipment required to achieve end-to-end connectivity to satisfy JCS Command, Control, Communications, and Intelligence (C3I) supporting the President; JCS; CINCs; Military Departments; Department of State; and other Departments and Agencies of the government. This project provides centralized funding for advanced systems engineering, analysis, research, development, test, and evaluation of new and emerging technologies that optimize terminal performance and interoperability on the digitized battlefield.

### **FY 1999 Accomplishments:**

- 1437 Conducted various development efforts or analysis to provide enhanced terminal capability
- Continued Battlefield Digitization architecture efforts for 4ID
- Advanced SATCOM architecture development (Advanced EHF (AEHF) and Wideband Gap Filler System (WGS))) 1036
- 993 AEHF waveform development

Total 4216

### FY 2000 Planned Program:

- 2174 Conduct various development efforts or analysis to provide enhanced terminal capability
- Continue Battlefield Digitization architecture efforts for 4ID and IIICorps
- Advanced SATCOM architecture development and System Engineering Support (AEHF and WGS) 1200
- 964 AEHF waveform development
- Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

**B.** Other Program Funding Summary: Not applicable

C. <u>Acquisition Strategy:</u> Development efforts for ACMS were initiated in FY 1996 under Projects D384 and D386. Project D559 ACMS Development funding line was created in FY 1998. ACMS is a Joint Service MILSTAR community initiative which is an integral part of the MILSATCOM Architecture. The MILSTAR Joint Program Office (MJPO) is managing the overall development effort. Input and interaction with the terminal offices is required to ensure a comprehensive system solution is achieved. Development work began in FY 1996 and will continue through FY 2001, as ACMS is phased in and tested incrementally.

D561 Military Individual Communicator (MIC)	0	10	001 10	17	0 0	0	0	0	2018	

**A.** <u>Mission Description and Budget Item Justification:</u> Project D561 – MIC: The Military Individual Communicator (MIC) will satisfy a critical joint warfighter requirement for limited, one-way communications capability in a hand-held configuration. The army anticipates initial market analysis and limited initial investments of RDTE will yield miniaturized technologies that can then be inexpensively procured on a large scale to satisfy joint service requirements.

FY 1999 Accomplishments: Project not funded in FY 1999

### FY 2000 Planned Program:

- 428 Conduct market survey to identify/assess industry interest and capability for development/production of MIC
- 546 Conduct engineering analysis to determine feasibility of achieving miniaturization to hand-held configuration
- 27 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 1001

# FY 2001 Planned Program:

- 812 Conduct equipment demonstrations for industry participants with existing or emerging MIC capabilities
- 205 Conclude engineering analysis and feasibility study

Total 1017

# **B.** Other Program Funding Summary: Not applicable

**C.** <u>Acquisition Strategy:</u> This project funds advanced systems engineering, research, development, test and evaluation of commercial technologies for the realization of one-way miniaturized communications capability in a hand-held configuration. The initial feasibility analysis will include market survey and industry equipment demonstrations.

A. <u>Mission Description and Budget Item Justification</u>: Project DC86 – Army Global Command and Control System (AGCCS): This project is the Army component system that directly supports the implementation of the Joint Global Command and Control System (GCCS). AGCCS provides automated command and control tools for Army Strategic and Theater Commanders to enhance warfighter capabilities throughout the spectrum of conflict during joint and combined operations in support of the National Command Authority (NCA). This support is being accomplished through the Army's Global Command and Control System (AGCCS), which is a selection of the Army's best-of-breed command and control functionality. The AGCCS-developed software systems will dramatically improve the Army's ability to analyze courses of action; develop and manage Army Forces supporting joint war plans; and ensure that the Army portions of war plans are feasible. The AGCCS will provide a layered architecture and functional best-of-breed software applications to develop a totally integrated component of the joint GCCS.

**D.** Acquisition Strategy: The AGCCS software integration and development effort is a multi-year incrementally funded spiral development effort. Spiral development will ensure interoperability with Joint and ABCS Systems as well as continuing development of objective Operational Requirements Document (ORD) capabilities. A hybrid (Cost-Plus-Award Fee and Firm-Fixed-Price) contract was awarded to Lockheed Martin Corporation (LMC) in December 1994. The contract consists of software development, software maintenance and relocation/de-installation of the test facility upon completion of the contract. PM STCCS established an Integrated Process Team (IPT) to review the status of software integration and development functional deliveries. The results of the IPT were instituted providing the users of AGCCS, mission software deliveries identified as Capability Package 1 (CP1), Deliveries one through four, and followed by required functional enhancements. CP1, which was delivered in

second quarter FY 1996 and designated IOC in fourth quarter FY 1996, provided the replacement for the AWIS strategic mission support applications/software and the Army's GCCS interface to selected HQDA, and FORSCOM sites. Deliveries one through four will provide the integration and migration of selected STACCS, TACCIMS,

and CSSCS Echelons Above Corps (EAC) mission support applications/software into a common baseline. Deliveries one through four are scheduled to be delivered to ten Army sites located throughout the world. A common hardware platform will be used within the Army to implement AGCCS/GCCS. This will include products from the Army's Common Hardware/Software-2 (CHS-2) contract, which consists of Commercial Off -the-Shelf (COTS) hardware and software. The COTS hardware and software will provide computers with expanded processing, storage and communications capability, as well as office-automation and management software.

A. <u>Mission Description and Budget Item Justification</u>: The Joint Precision Approach Landing System (JPALS) is a precision approach and landing system providing joint operational capability for U.S. forces assigned to conventional and special operations missions including those operating from fixed base, ship, tactical and austere environments. Effort develops the methodology to incorporate JPALS into aircraft while considering aircraft environment, electrical power, system space, weight, antenna placement and electromagnetic compatibility without nullifying low observable capability requirements. Project in this Program Element supports research efforts in the Architecture and Requirements Definition phase of the modified acquisition life cycle approved by the Defense Acquisition Executive in September of 1998.

**FY 1999 Planned Program:** Project not Army funded in FY 1999, Air Force funded.

FY 2000 Planned Program: Project not Army funded in FY 2000, Air Force funded.

# FY 2001 Planned Program:

• 783 Support the joint effort by providing system engineering, logistics and technical documentation for JPALS Development effort.

H13 Information Dominance Center (IDC)	0	6866	0	0	0	0	0	0	6866

A. Mission Description and Justification: This program element provides funding to develop Proof of Concepts to define fundamental capabilities and limitations of Focused Intelligence XXI technologies which supports Force XXI. Focused Intelligence addresses the functional areas of Situational Awareness, Information Management, and Predictive Analysis. This requires a comprehensive understanding of the following seven critical technologies when integrated into live, virtual or constructive environments. These critical technology areas include: displays (public, cockpit and heads-up), computer hardware capable of high-speed analytical and graphical processing, computer software for distributed tactical or simulation environments (including tools such as Knowledge Based Reasoning and Artificial Intelligence), networks which link tactical and high-speed wide area capabilities [utilizing Asynchronous Transfer Mode (ATM), Synchronous Optical Net (SONET), and multi-level security capabilities] throughout all echelons, sensors for real-time information of the battlefield throughout the electromagnetic spectrum, the Dynamic Visualization Databases for live or synthetic environment (including terrain, features, texture, images, weather, environment, entities and units as a minimum), and the Automatic Target Recognition (ATR) and Assisted Target Recognition (AITR) for timeline reductions. This program element also provides funding for the Information Dominance Center (IDC). The IDC is a beta development and demonstration facility, which uses advanced indigenously developed software and architectures for harvesting, visualizing, displaying, sharing across organizations, analyzing, fusing, and developing courses of action for commanders and decision makers in a real-time environment. The center can address both a tactical or strategic threat across a wide array of transnational and asymmetrical foes.

H13 Information Dominance Center (IDC)	0	686	66 0	0	0	0	0	0	6866

A. <u>Mission Description and Justification</u> This PE is used to develop a prototype for intelligence analysis and counter-intelligence operations supporting information operation missions. Denying, disrupting, and suppressing the adversary's information flow and his ability to effectively command and control his operations is the Army's goal of waging information age warfare. The IDC is a beta development and demonstration facility, which uses advanced indigenously developed software and architectures for harvesting, visualizing, displaying, sharing across organizations, analyzing, fusing, and developing courses of action for commanders and decision makers in a real-time environment. The center can address both a tactical or strategic threat across a wide array of transnational and asymmetrical foes.

The IDC will play a critical role in Army's development of a full spectrum information operations capability that spans both the offensive and protect arenas. Key to waging an information war against and enemy will be gaining and maintaining full spectrum battlefield visualization, comprehension of enemy and friendly centers of gravity, knowledge of battlefield deception, PSYOP, public affairs, civil affairs, electronic warfare, OPSEC, and understanding of impact upon destruction or disruption of critical nodes (regional and local). The IDC will support Force Protection/anti-terrorism operations by providing predictive analysis and indications and warnings of attacks on our soldiers or infrastructure. The IDC also will be employed in support of peacekeeping and humanitarian aid missions. The IDC will demonstrate and test methodologies and Science and Technology tools that can provide operational plans to fight asymmetric and asynchronous warfare against transnational and non-aligned threats. This new capability would provide the unique collaborative environment to rapidly acquire diverse information, dynamically achieve situational awareness through advanced fusion and visualization techniques, and provide tailored courses of action to warfighters and DA decision-makers.

The IDC will correlate data from local and international media as well as operational and intelligence sources. The center will perform evaluation and prototyping of how threat mapping of political, military, economic, and social fabrics will aid in force protection/facilities protection for U.S. forces on the ground now or that might be sent in later. The IDC will be the prototype for fused battlefield visualization picture of the affects of air war at one location on a big screen display—collateral damage; infrastructure damage; location of paramilitary and military forces (Freedom fighters and Serbs); and dislocation of refugees and resultant humanitarian aid issues. The IDC will demonstrate a fused battlefield visualization picture of foreign and U.S. centers of gravity in support of contingency operations such as \Kosovo and SFOR Operations to help support diplomatic initiatives. It will prototype a fused, object oriented, GIS-oriented, visualization picture of the major political and economic players at international, national, regional, local levels in Serbia and surrounding regions. In addition, the IDC will leverage an ability to analyze a tactical view of the conflict enabling Army to conduct offensive information operations (PSYOP, computer attack, deception and denial, media influence, cover operations) that could be used to compliment the air strikes.

**FY 1999 Accomplishments:** Project not funded in FY 1999

#### FY 2000 Planned Program:

- 2687 Core IDC Software/Hardware Integration Contractor Support: This is the key team for integration and prototyping of leading edge technologies into the IDC. In addition, this team prior to integration will perform continuous prototyping of novel solutions. They are fundamentally responsible for overall architectural control and evolution of the composable architecture, which is the foundation for LIWA's operational uniqueness.
- 3995 TUAV Source Selection/System Capabilities Demo Data Storage and Support: This money enables a state of the art 200 Terabyte storage, retrieval, backup and querying capability for a distributed architecture. The IDC is based on a database centric paradigm enabling state of the art business enterprise applications to be incorporated.
- Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 6866

FY 2001 Planned Program: Project not funded in RDTE in FY 2001. Continued development and sustainment will take place using OMA funding-Program BA411128.

**B.** Other Program Funding Summary: Not applicable

**C.** <u>Acquisition Strategy:</u> The Army strategy is to add emerging command and control information technology to existing information and decision support architectures. Systems will largely off-the-shelf procurements. A Time and materials contracts, awarded to Sterling Software, are used for software and hardware integration. A time and materials contract awarded to SYTEX, Inc. is used for development of intelligence modeling support.

A. Mission Description and Justification: The Brigade Tactical Unmanned Aerial Vehicle (TUAV), provides Army brigades/battalions with dedicated day/night, reconnaissance, surveillance and target acquisition (RSTA) and intelligence. TUAV provides the tactical warfighting commander with critical battlefield information in the rapid cycle time required for success at the tactical level. The TUAV system consists of multiple air vehicles, each configured with an electro-optic (EO)/infrared (IR) sensor payload, ground control equipment, including communications equipment, launch and recovery equipment, remote video terminal, Highly Mobile Multi Wheeled Vehicles with trailer(s), and one mobile maintenance facility capable of supporting up to three TUAV systems. This TUAV development effort provides systems in the hands of the brigade operational users as quickly as possible, systems for use in demonstrations/Initial Operational Test & Evaluation (IOT&E) and continues development of TUAV system improvements. Tactical Control System (TCS) software will be integrated with the TUAV system when available and validated. The JTC/SIL is a joint integration center that develops simulations of tactical UAVs and strategic reconnaissance and imagery. It also utilizes the Modernized Imagery Exploitation System (MIES), the Enhanced Tactical Radar Correlator (ETRAC), and a variety of C4I systems and interfaces, namely the Tactical Control System. The MUSE system provides for the development of real-time, interoperable hardware and operator in-the-loop simulations of multiple intelligence systems that may be integrated with larger simulations in support of Service exercises. MUSE development provides a realistic operational environment that supports a wide range of information efforts.

Tactical Control System (TCS) software will be integrated with the TUAV system when available and validated.

#### FY 1999 Accomplishments:

- 17800 Tactical UAV Low Rate Initial Production (LRIP) Program
- 7200 TUAV Source Selection/System Capabilities Demo
- 4900 Development of TUAV Ground Control Station Architecture (3 Prototypes)
- 350 Army Apache/UAV Interoperability Demonstration
- 10600 Outrider Advance Concept Technology Demonstration (ACTD) Bridge Contract
- 250 Tactical Common Data Link Integration
- 4140 Hunter UAV non-recurring (e.g. Enhanced Mission Payloads) to support JRTC (Joint Readiness Training Center) requirements.
- 4279 Program Management Support
- 200 Improved EO/IR Payload Modification/Integration Assessment for Demo on Hunter
- 270 Advanced Payload Development Support
- 200 Tactical Control System Integration

Total 50189

#### FY 2000 Planned Program:

- 19944 Tactical UAV Low Rate Initial Production (LRIP) Program
- 3236 Government Furnished Equipment for 4 LRIP TUAV systems for development and IOT&E
- 1500 Tactical Control System Integration
- 3600 Program Management Support
- 5821 Risk Reduction Testing/ST&E/IOT&E Preparation

TUAV Procurement (BA0330)	0	796	37789	44670	57356	63064	51350	Continue	Continue

Note: Other related Navy dollars fund the development of TCS software for integration into the TUAV under this project. Other related DARPA dollars fund the development of the TCDL for integration into the TUAV under this project

C. Acquisition Strategy: The Army strategy is to quickly field a TUAV system to meet the Brigade Commander's needs. The system will be largely off the shelf, meeting Key Performance Parameters of the 12 March 1999 Operational Requirements Document (ORD), with other ORD requirements treated as prioritized trade space. Growth to objective requirements will be accomplished using block upgrades. A TUAV Request for Proposal was issued in April 1999 including a Fixed Price Incentive Fee option for Low Rate Initial Production (LRIP) Systems, a full rate production option and various support options. Initial offers were screened and a System Capabilities

Demonstration (SCD) was conducted with four contractors. The results from the SCD in conjunction with proposal evaluations resulted in the competitive down select of a Best Value TUAV system. A successful Milestone II ASARC was conducted on 21 December 1999, and a TUAV LRIP contract was awarded to the AAI Corporation on 27

December 1999. A successful LRIP program will lead to a MS III decision and award of full rate production. In addition, PEO IEW&S is assessing prudent approaches to accelerating fielding of the TUAV systems following a successful system OPTEMPO demonstration. Continued development of the selected TUAV system will be accomplished through a series of block upgrades to incorporate improvements such as extended range and endurance, increased payload weight space and power capability, TCS, TCDL and advanced sensor payloads as they mature and are operationally proven.

A. <u>Mission Description and Budget Item Justification</u>: The Joint Technology Center / System Integration Laboratory (JTC/SIL) is a joint integration center that develops simulations of tactical UAVs and strategic reconnaissance and imagery. It also utilizes the Modernized Imagery Exploitation System (MIES), the Enhanced Tactical Radar Correlator (ETRAC), and a variety of C4I systems and interfaces, namely the Tactical Control System. The MUSE system provides for the development of real-time, interoperable hardware and operator in-the-loop simulations of multiple intelligence systems that may be integrated with larger simulations in support of Service exercises. MUSE development provides a realistic operational environment that supports a wide range of information efforts. This project funds the management of the JTC/SIL and MUSE enhancements.

A. <u>Mission Description and Budget Item Justification:</u> This project continues development of advanced tactical reconnaissance and surveillance sensor technologies that were developed from the Defense Airborne Reconnaissance Office and develops technology for the on-board fusion of multidiscipline intelligence sensors, i.e. SIGINT, MTI/SAR Radar, MASINT. Hyperspectral, multi-spectral, interferometric synthetic aperture radar sensors, advanced target and image exploitation software will be developed for imaging intelligence (IMINT) and measurement and signature intelligence (MASINT) applications. The adaptive spectral reconnaissance program (ASRP) is a joint DARPA/Army (CECOM) effort funded in this project. ASRP develops the next generation airborne day/night hyperspectral reconnaissance sensor for the detection and identification of camouflaged and concealed targets in all terrain environments. The Signals Warfare Project Office will leverage and continue the development of the MASINT/IMINT technologies for the Aerial Common Sensor. The Interferometric Synthetic Aperture Radar (IFSAR) Program is executed out of the Joint Precision Strike Demonstration Project Office (JPSD PO). IFSAR provides the capability to rapidly generate three-dimensional (3-D) high resolution Digital Terrain Elevation Data (DTED III-V). This data will be used in the generation of high-resolution digital terrain databases to support crisis response and force projection operations within the timelines required by the joint force commander. The IFSAR development supports the Rapid Terrain Visualization (RTV) Advanced Concept Technology Demonstration Future efforts will be directed toward the development of advanced multi-mode EO/IR, multi-mode SAR/MTI radar, foliage penetration radar, multi-spectral/hyperspectral imageries, MASINT on-board fusion, and registered MTI/SIGINT cueing of EO/IR/SAR/HSI imaging sensors.

FY01 Funds completes the development and test of the Long Wave Infrared (LWIR) Hyperspectral sensor (HSS) and the collection, measurement and evaluation of IFSAR data sets. (FY00 and prior this PE was reported under OSD/DARPA)

#### **FY 1999 Accomplishments:**

- 3773 -Completed development of near-real time IFSAR
  - -Modified deHavilland DHC-7 aircraft for integration of IFSAR system.
- 3451 -Awarded contract for the development of a small lightweight Long Wave Infrared hyperspectral sensor.
  - -Demonstrated real time Hyperspectral detection and high resolution imagery cueing of military targets.
  - -Participated in joint data collections and exercises.

Total 7224

#### FY 2000 Planned Program:

- 932 -Demonstrate near real time DTED Level III-IV capability.
  - -Demonstrated very fine resolution geographically accurate IFSAR imagery for 3-D earth-centered targeting.
- 3832 -Complete design of LWIR HSS system and initiate integration on testbed aircraft.
  - -Develop and integrate multiple algorithm fusion processing techniques of advanced spectral detection software.

#### FY 2000 Planned Program: (continued)

-Conduct ASRP data collection activities of various terrain and environmental backgrounds.

-Conduct real time test of fusion algorithms processed Hyperspectral Imaging (HSI) data.

Small Business Innovative Research/Small Business Technology Transfer Program

Total 4895

#### FY 2001 Planned Program:

• 2003 -Complete integration and test of the LWIR Hyperspectral Sensor (HSS) system on testbed aircraft for the adaptive spectral reconnaissance program (ASRP)

-Conduct data collection and real time demonstrations with LWIR HSS testbed aircraft for ASRP

-Conduct data analysis of advanced HSS utility for future airborne reconnaissance applications.

• 2895 -Collect IFSAR data and develop/process high-resolution data sets

-Complete evaluation of military utility of IFSAR sensor, data, RTV process and products with XVIII ABN and III Corp

Total 4898

**D.** <u>Acquisition Strategy:</u> ASRP has established sensor development as a major thrust towards understanding the technical underpinnings of spectral technology for military applications. This DARPA managed program, which began in FY 1997 includes cooperation from multi-services including US Army, CECOM, NVESD for execution of data collections and the LWIR HSS system development. The LWIR HSS system acquisition strategy provides for the award of a 24-month effort to begin in FY 1999 under best value full and open competition procedures. Data collection efforts to support analytic studies began in FY 1998 using existing sensor and hardware integrated on an NVESD testbed aircraft.

A. Mission Description and Budget Item Justification: This project supports the engineering development and acquisition of Army Common Imagery Ground/Surface Systems (CIG/SS). The objective of CIG/SS is to enable all systems to receive, process, exploit, and report any imagery source regardless of platform or sensor type to meet the intelligence and targeting needs of tactical commanders. The CIG/SS project provides the warfighter with an integrated and interoperable airborne reconnaissance imagery processing and exploitation capability that can be tailored for all levels of conflict. This project incorporates the Enhanced Tactical Radar Correlator (ETRAC), Modernized Imagery Exploitation System (MIES), and the imagery portion of the Tactical Exploitation System (TES). ETRAC is a C-130 drive on/off capable system that receives Advanced Synthetic Aperture Radar (ASAR) data inputs from various platforms, converts the SAR data to exploitable images, and is capable of stand-alone operations. MIES receives and exploits imagery from national and theater sources and provides intelligence reports and exploited imagery products to the field commander. ETRAC and MIES functionality are combined in the Tactical Exploitation System (TES) to be fielded beginning in FY00. Specific details are provided in the Tactical Intelligence and Related Activities (TIARA) Congressional Budget Justification Book, Vol. II.

#### **FY 1999 Accomplishments:**

- 6794 Continued CIG/SS elements sustaining engineering to implement software upgrades and enhancements to maintain compatibility with changing national and tactical interfaces (ETRAC and MIES).
- 1791 Continued development/enhancements/integration of CIG/SS components into TES systems. (TES)

Total 8585

#### FY 2000 Planned Program:

- 1940 Continue CIG/SS elements sustaining engineering to implement software upgrades and enhancements to maintain compatibility with changing national and tactical interfaces (ETRAC and MIES).
- 4664 Continue development/enhancements/integration of CIG/SS components into TES systems. (TES)
- Modify TES systems for interoperability with the U-2 after Advanced Synthetic Aperture Radar System (ASAR) Improvement Program (AIP) upgrade.

**D.** Acquisition Strategy: As pioneers in streamlined acquisition, ASPO's success in delivering systems as those described above to warfighters can be directly attributed to an environment emphasizing stable funding, low density acquisition, minimal use of MILSPECS, and managed competition. By tailoring existing technology, leveraging the best commercial practices and using commercial and government-off the shelf software, ASPO minimizes risk while maximizing efficiency. Finally, dedicated cradle to grave Integrated Logistics Support (ILS) for TENCAP systems is accomplished through a coordinated effort by Government and contractor personnel and facilities.

D784 Guided MLRS	16059	28148	17688	18569	489	0	0	0	94398

A. Mission Description and Justification: Expanding regional power threats require an evolutionary improvement program to maintain the effects of the Multiple Launch Rocket System (MLRS). This Product Improvement Program (PIP) provides for the Engineering and Manufacturing Development (EMD) of an Improved Launcher Mechanical System (ILMS), Guided MLRS Rocket (GMLRS), Joint Technical Architecture-Army (JTA-A) and High Mobility Artillery Rocket System (HIMARS). The ILMS, by decreasing the stow to aim point timeline, will increase responsiveness, improve survivability, and enhance effectiveness in countering surface to surface missile fire. HIMARS will allow MLRS capability to be C-130 transportable by mounting one rocket or missile pod on a 5-ton truck. It gives early entry forces immediate fire support within a hot landing zone without waiting for heavy-lift aircraft. The JTA-A will implement dual protocol capability and Force XXI Situational Awareness in M270A1 launchers and trainers. A multinational GMLRS program will greatly enhance the capability of the existing MLRS by providing greater range and significantly enhanced accuracy and interoperability among the nations signing the MLRS Memorandum of Understanding (MOU). The improvement in accuracy and range will reduce the number of rockets required to defeat targets, thus dramatically reducing the logistics burden, and will increase crew survivability.

D027 MLRS ILMS	1050	(	0	0	0	0	0	0	70025

A. <u>Mission Description and Justification:</u> The MLRS Improved Launcher Mechanical System (ILMS) project provides for the Engineering and Manufacturing Development (EMD) of the ILMS. The ILMS decreases the stow to aim point timeline, enhances effectiveness in engaging and supporting the force, and increases MLRS platform survivability. The ILMS replaces selected hydraulic and mechanical components of the MLRS M270 launcher mechanical drive system. The time required for movement of the Launcher Loader Module from the stowed position to first rocket away is reduced from 93 seconds to 16 seconds. Reload operations for twelve rockets are reduced from 260 seconds to 160 seconds. These improvements allow faster engagement of short dwell time targets and increase crew survivability on the firing point and reload area. Reduced operation and support costs are expected with this design. When combined with the Improved Fire Control System (IFCS), the launcher is designated as M270A1.

A. <u>Mission Description and Justification:</u> The High Mobility Artillery Rocket System (HIMARS) provides for the maturation phase of the HIMARS launcher. HIMARS will be a C-130 transportable, wheeled version of the MLRS launcher and will be capable of firing all rockets and missiles in the current and future Multiple Launch Rocket System (MLRS) Family of Munitions (MFOM). The HIMARS will provide tactical and operational fires during both offensive and defensive operations. The HIMARS will consist of the MLRS Improved Fire Control System (IFCS), a wheeled carrier, an on-board reload capability, and a Launcher Loader Module (LLM) portion that will perform all operations necessary to complete a fire mission. The HIMARS will be deployable worldwide and will operate in a wide range of climatic conditions. HIMARS units will functionally/operationally mirror current MLRS units and will be assigned to Corps field artillery brigades in support of light, airborne, air assault Divisions and forced/early entry contingency force operations.

#### **FY 1999 Accomplishments:**

- 2364 Risk Reduction Tasks including Reloader/Hydraulic Robustness/Reliability Efforts
- 1000 OGA Support
- 541 Technical Assessments/Evaluations, Simulation Support
- 295 Development Testing
- 335 Maturation Preparation: Milestone Documentation

C. Acquisition Strategy: The GMLRS acquisition strategy is a streamlined product improvement program which permits entering Low Rate Initial Production (LRIP) and subsequent Full-Scale Production, after completion of a 48-month EMD program. The primary objective of the EMD phase is to develop a rocket with greater range and significantly enhanced accuracy with minimum impact on existing MLRS companion hardware and software. This effort will incorporate the results of other development efforts for a modified submunition and a new rocket motor for increased range. The acquisition alternative most advantageous to the government is a sole source EMD contract to the system prime contractor, Lockheed Martin Missile & Fire Control Systems (LMMFCS), with maximum competition of non-developmental item (NDI) components at the vendor level.

A. Mission Description and Justification: This program element comprises four projects: Manufacturing Technology (MANTECH); Reliability, Maintainability and Supportability (RM&S); the National Defense Center for Environmental Excellence (NDCEE); and Commercial Operations and Support Savings Initiative (COSSI). The goal of the Army MANTECH program is to provide essential manufacturing technologies that will enable affordable production and sustainment of future weapon systems. Objectives include development of advanced manufacturing processes, equipment and systems; enhancement in quality while achieving reduction in cost of Army materiel; and transferring improved manufacturing technologies to the industrial base. The MANTECH program is especially important in the current environment because of the large decline in weapon system production investments. Projects selected to be funded under this program have the potential for high payoff across the spectrum of Army weapon systems as well as significant impact on national manufacturing issues and the U.S. industrial base. The RM&S program funds projects that reduce operations and support costs through reliability, maintainability, and/or supportability improvements to fielded weapons systems or major end items. RM&S was initially funded in fiscal year 1997 under the Other Procurement Army 3 - Depot Maintenance and Other End Items. Funding was eliminated by Congress in fiscal year 1998 because projects appeared to be research and development rather than depot maintenance. For fiscal year 1999 and out-years, funding is transferred to PE 0708045A DE27. The NDCEE is a Congressionally directed project which has the mission to demonstrate and export new environmentally-acceptable technology to the industrial base; train the industrial base on the use of the new technology; perform research and development, where necessary, to mature a new technology prior to demonstrating and exporting the new technology to the industrial base; and assist DoD in technology transfer. The Center's goal is to resolve the environmental technology and management requirements of the DoD community and commercial industrial base. NDCEE will transfer to BA4 PE 0603779A starting in FY01. COSSI is funded under this program element (PE 0708045A) beginning in FY 2000. The mission of the COSSI program is to reduce operations and support costs by developing, testing, and implementing a method to insert commercial items into fielded military systems on a routine and expedited basis.

**A.** <u>Mission Description and Justification</u>: The goal of the Army Manufacturing Technology (MANTECH) program is to provide essential manufacturing technologies that will enable the affordable production and sustainment of future weapon systems. Objectives include development of advanced manufacturing processes, equipment and systems; enhancement in quality while achieving reduction in cost of Army materiel; and transferring improved manufacturing technologies to the industrial base. The MANTECH program is especially important in the current environment because of the large decline in weapon system production investments since most manufacturing technology was formerly accomplished within individual production programs. Projects selected to be funded under this program have the potential for high payoff across the spectrum of Army weapon systems as well as significant impact on national manufacturing issues and the U.S. industrial base. Other factors considered for project selection include cost share with both industry and the program managers as well as return on investment. Major programs are identified as Manufacturing Technology Objectives (MTOs).

## FY 1999 Accomplishments:

- Air Defense Developed new manufacturing processes and work cells for the manufacturing of Patriot PAC3 traveling wave tubes; developed
  methods for the automated tuning of filters within the master frequency generator for the Patriot PAC3 system.
- 17461 Ammunition Demonstrated technology to minimize seasonal variations of the solvent and thermal content of the propellant blocks, providing for more uniform products, greater yields and less rework; as part of Totally Integrated Munitions Enterprise, addressed issues in controllers, system architecture, electronics, composites energetics, Objective Individual Combat Weapon (OICW) Tungsten Warhead, M829E3 processes, combustible cartridges and XM982 rotating band processing for accelerated munitions MANTECH insertion.
- Aviation Developed and demonstrated the technical feasibility and economic benefits of a robotic automated deburring system which is currently being applied to production of the Comanche and continued projects to reduce inspection and finishing costs of gears and related complex precision metal components at the Instrumented Factory for Gears; demonstrated a statistical process control expert system for shop-floor management at Corpus Christi Army Depot.
- 561 Command and Control Demonstrated the thin film ferroelectric properties required for extremely high frequency comm-on-the-move applications.
- Combat Service Support Developed assembly process for reduced manufacturing costs of ceramic plates used in next generation of body armor which PM soldier type-classified, thereby guaranteeing implementation.

DE27 Reliability, Maintainability and Supportability (RM&S)	9247	156	36 18623	18070	19441	19661	19874	Continuing	Continuing	

A. <u>Mission Description and Justification</u>: The Reliability, Maintainability and Supportability (RM&S) program supports innovative, state-of-the-art projects to reduce Operations and Support (O&S) costs by replacing or improving components of fielded weapon systems with more reliable, maintainable and/or supportable items. The RM&S program is limited to improvements that reduce the cost of ownership for fielded systems and equipment. RM&S funds may not be used to modify a weapon system currently in development, until the weapon system has satisfied all supportability requirements defined in the Operational Requirements Document (ORD) or system specification. The RM&S program uses Research, Development, Test and Evaluation (RDT&E) funding, which allows the pursuit of complex technology insertion projects.

## **FY 1999 Accomplishments:**

9247

Aviation - Completed software development and testing, system verification and acceptance testing of a prototype universal computer controlled static balance fixture that can balance any DoD main rotor blade; replaced the Hunter System Unmanned Aerial Vehicle Short Range (UAV-SR) wooden propeller with a composite propeller that has a life expectancy ten times greater than the wooden propeller and will lower the annual consumption rate of propellers from 169 to 17; developed a preventive and predictive maintenance expert system for real time monitoring and tracking of sources of machine deterioration for Corpus Christi Army Depot's (CCAD's) whirl tower, autoclave, and engine and transmission test cells; released funds and awarded contract to design a new CH-47 Chinook helicopter rotor hub.

Total 9247

# FY 2000 Planned Program:

8177

Aviation - Perform analytical design, prepare modification drawings, and procure or develop smart orifices for a high performance scalable landing gear shock strut that is less susceptible to damage; complete and implement a preventive and predictive maintenance expert system for real time monitoring and tracking of sources of machine deterioration for CCAD's automatic test equipment; design a new CH-47 rotor hub to eliminate wet bearings and replace the bearings with elastomeric bearings which require no additional lubrication; establish an aggressive fleet maintenance management capability composed of process, policy, and hardware improvements significantly reduce support costs and improve operational readiness for the CH-47 fleet.

DE31 National Defense Center for Environmental Excellence (NDCEE)	4733	489	95 0	0	0	0	0	0	9685	

A. Mission Description and Justification: This Congressionally mandated project is managed by the Army on behalf of the Office of the Deputy Under Secretary of Defense for Environmental Security (DUSD-ES). NDCEE program was transferred to BA 4 PE 0603779A per Congressional Direction for FY01 and beyond. The mission of the NDCEE is four-fold: (1) Demonstrate and export new environmentally-acceptable technology to the industrial base; (2) train the industrial base on the use of the new technology; (3) perform research and development, where necessary, to mature a new technology prior to demonstrating and exporting the new technology to the industrial base and (4) assist DoD in technology transfer. The NDCEE, which is located in Johnstown, Pennsylvania, has the goal of resolving the environmental technology and management requirements of the DoD community and commercial industrial base. The primary in-house development agency is the U.S. Army Materiel Command's Armament Research, Development, and Engineering Center, Picatinny Arsenal, NJ.

The NDCEE has positioned itself as a critical resource for the Deputy Under Secretary of Defense for Environmental Security for environmental management and technology validation and integration. Major programs supported by the Center include the Joint Group on Acquisition Pollution Prevention, Toxics Reduction Investment & Management (TRIM), environmental cost accounting standards development supporting the DoD sustainment community and the DoD fuel cell program.

#### FY 1999 Accomplishments:

- - 4733 Assisted the needs of Army/DoD pollution prevention and the Joint Logistic Commanders in use of Joint Group for Pollution Prevention (JG-PP) methodology to aid the acquisition and sustainment communities (original equipment manufacturers and depots).
    - Maintained Environmental Technology Facility and demonstrated environmentally acceptable technologies of DoD components and conducted technology transfer activities (requirements determination, technology selection, equipment selection, installation de-bugging, training) for Army and DoD facilities. Feasibility studies conducted on Army/DoD components to validate environmentally acceptable processes.
    - Supported pollution prevention efforts in acquisition through development of joint test protocols, multi-service needs identification, regulatory analysis and prediction, formal environmental cost analyses, risk assessments, life cycle environmental assessments and incorporation of environmental management standards and principles. Standardized Cost Analysis (Environmental Cost Analysis Methodology) and Risk (Industrial Risk Health Assessment) tools developed and verified for DoD use.

DE32 Commercial Operations and Support Savings Initiative (COSSI)	0	3035	55 9938	10089	10242	10449	10662	Continuing	Continuing	

Mission Description and Justification:

The mission of Commercial Operations and Support Savings Initiative (COSSI) is to develop and test a method for reducing Army Operations and Support (O&S) costs by routinely inserting commercial items into fielded military systems. The insertion of commercial items is expected to reduce O&S costs by reducing the costs of parts and maintenance, reducing the need for specialized equipment, increasing reliability, and increasing the efficiency of subsystems. Selected proposals will develop, manufacture, and deliver prototype "kits" to the military for installation into fielded Army systems. COSSI is a two-stage process. In Stage I of each selected project, COSSI and the chosen proposer will share the costs of developing and testing the kit, with the proposer contributing at least 25% of the estimated costs of Stage I. For FY01 Solicitation proposer must cost share, but the 25% minimum has been waived. If Stage I is successful, Stage II will be initiated. In Stage I, the military customer may then purchase reasonable production quantities of the kit. Army further requires Stage II funding identification prior to approval of Stage I. COSSI was funded in DoD PE 0603805E through FY1998, transferred to Army PE 0604824A in FY1999, and was transferred to this PE in FY2000. FY00 Project DE32 (COSSI) funds have been realigned to fund MANTECH projects in the amount of \$11059, and Reliability, Maintainability, and Supportability (RM&S) projects in the amount of \$16137, due to insufficient response to the FY00 COSSI solicitation. FY 2001 funding will be for new Stage I COSSI projects. The FY2001 COSSI CBD announcement was released in January 2000, and proposals are due in April 2000. General topic areas include AH64 primary hydraulic manifold, utility man drive shaft; Bradley Sentinel system communications equipment, electronics, man-machine interface, power supplies, embedded removable data logger/storage device and generator; Bradley Hunter system automated maintenance and preflight,

FY 1999 Accomplishments: Program funded in Army PE 0604824A.

# FY 2000 Planned Program:

- 1042 Intelligence and Electronic Warfare Insert a video/imagery hypercompression transceiver and a relay module to improve generations three and four of the Guardrail Common Sensor Replacement Receivers (GCSRR) by replacing obsolete VHF receiver equipment with a package based on commercially available receiver technology. This replacement will provide significant cost savings and improve system readiness for the weapon system.
- 1300 Maneuver Apply a patented, low cost, commercial metal injection molding into first and second stage compressor blades for the AGT1500 gas turbine engine on the US Army M1 Abrams Tank. This will enable the use of commercial practices and technologies to develop a lower cost compressor blade and vane manufacturing process to lower O&S costs.

A. <u>Mission Description and Budget Item Justification</u>: The United States is a major participant in a cooperative venture to select and procure a ground surveillance capability for NATO forces. Initial efforts to evaluate various potential solution sets for the NATO Alliance Ground Surveillance System (NAGS) commenced in May 1995. A NAGS Project Office was established at SHAPE Technical Center (STC) and will continue to operate until the final NAGS configuration is selected. Under this PE/Project, the Army will conduct and support interoperability experimentation and demonstrations between the Joint Surveillance Target Attack Radar System (Joint STARS) Ground Station and various Allied weapon systems. These funds are to be used for the US Advanced Radar System (ARS) system requirements analysis, system design and interoperability demonstrations with the US CGS systems involving the principle NATO participants.

## **FY 1999 Accomplishments:**

152 NATO Command, Control and Consultation Agency (NC3A) Support

• 2632 US Advanced Radar Sensor (ARS) (NATO Version of the US Enhanced Radar)

**D.** <u>Acquisition Strategy:</u> All hardware has been procured. The concept definition effort was awarded to the CGS contractor based on their extensive knowledge of the system and their continuous involvement in the NATO program. This is a Sole Source FFP type contract. Participation in the concept definition is vital to ensure US Government and Army mandates are satisfied and to protect US interests in the development of the full AGS program plan. Once approved by NATO, the participating nations will share in the full cost of the AGS system acquisition.
